¶ 2. It has seemed to me that the use of this ordinance tends to produce confusion in our views of the relation of the soul to God. It is the old objection to the doctrine of the Trinity,—that the true worship was transferred from God to Christ, or that such confusion was introduced into the soul that an undivided worship was given nowhere. Is not that the effect of the Lord's Supper? I appeal now to the convictions of communicants, and ask such persons whether they have not been occasionally conscious of a painful confusion of thought between the worship due to God and the commemoration due to Christ. For the service does not stand upon the basis of a voluntary act, but is imposed by authority. It is an expression of gratitude to Christ, enjoined by Christ. There is an endeavor to keep Jesus in mind, whilst yet the prayers are addressed to God. I fear it is the effect of this ordinance to clothe Jesus with an authority which he never claimed and which distracts the mind of the worshipper. I know our opinions differ much respecting the nature and offices of Christ, and the degree of veneration to which he is entitled. I am so much a Unitarian as this: that I believe the human mind can admit but one God, and that every effort to pay religious homage to more than one being goes to take away all right ideas. I appeal, brethren, to your individual experience. In the moment when you make the least petition to God, though it be but a silent wish that he may approve you, or add one moment to your life,—do you not, in the very act, necessarily exclude all other beings from your thought? In that act, the soul stands alone with God, and Jesus is no more present to your mind than your brother or your child.

¶ But is not Jesus called in Scripture the Mediator? He is the mediator in that only sense in which possibly any being can mediate between God and man,—that is, an instructor of man. He teaches us how to become like God. And a true disciple of Jesus will receive the light he gives most thankfully; but the thanks he offers, and which an exalted being will accept, are not compliments, commemorations, but the use of that instruction.

¶ 3. Passing other objections, I come to this, that the use of the elements, however suitable to the people and the modes of thought in the East, where it originated, is foreign and unsuited to affect us. Whatever long usage and strong association may have done in some individuals to deaden this repulsion, I apprehend that their use is rather tolerated than loved by any of us. We are not accustomed to express our thoughts or emotions by symbolical ac-

tions. Most men find the bread and wine no aid to devotion, and to some it is a painful impediment. To eat bread is one thing; to love the precepts of Christ and resolve to obey them is quite another.

¶ The statement of this objection leads me to say that I think this difficulty, wherever it is felt, to be entitled to the greatest weight. It is alone a sufficient objection to the ordinance. It is my own objection. This mode of commemorating Christ is not suitable to me. That is reason enough why I should abandon it. If I believed it was enjoined by Jesus on his disciples, and that he even contemplated making permanent this mode of commemoration, every way agreeable to an Eastern mind, and yet on trial it was disagreeable to my own feelings, I should not adopt it. I should choose other ways which, as more effectual upon me, he would approve more. For I choose that my remembrances of him should be pleasing, affecting, religious. I will love him as a glorified friend, after the free way of friendship, and not pay him a stiff sign of respect, as men do those whom they fear. A passage read from his discourses, a moving provocation to works like his, any act or meeting which tends to awaken a pure thought, a flow of love, an original design of virtue, I call a worthy, a true commemoration.

¶ 4. The importance ascribed to this particular ordinance is not consistent with the spirit of Christianity. The general object and effect of the ordinance is unexceptionable. It has been, and is, I doubt not, the occasion of indefinite good; but an importance is given by Christians to it which never can belong to any form. My friends, the Apostle well assures us that "the kingdom of God is not meat and drink, but righteousness, and peace, and joy in the Holy Ghost." I am not so foolish as to declaim against forms. Forms are as essential as bodies; but to exalt particular forms, to adhere to one form a moment after it is outgrown, is unreasonable, and it is alien to the spirit of Christ. If I understand the distinction of Christianity, the reason why it is to be preferred over all other systems and is divine is this, that it is a moral system; that it presents men with truths which are their own reason, and enjoins practices that are their own justification; that if miracles may be said to have been its evidence to the first Christians they are not its evidence to us, but the doctrines themselves; that every practice is Christian which praises itself, and every practice unchristian which condemns itself. I am not engaged to Christianity by decent forms, or saving ordinances; it is not usage, it is not what I do not understand, that binds me to it,—let these be the sandy foundations of falsehoods. What I revere and obey in it is its reality, its boundless charity, its deep interior life, the rest it gives to mind, the echo it returns to my thoughts, the perfect accord it makes with my reason through all its representation of God and His Providence; and the persuasion and courage that come out thence to lead me upward and onward. Freedom is the essence of this faith. It has for its object simply to make men good and wise. Its institutions then should be as flexible as the wants of men. That form out of which the life and suitableness have departed should be as worthless in its eyes as the dead leaves that are falling around us.

¶ And therefore, although for the satisfaction of others I have labored to show by the history that this rite was not intended to be perpetual; although I have gone back to weigh the expressions of Paul, I feel that here is the true point of view. In the midst of considerations as to what Paul thought, and why he so thought, I cannot help feeling that it is time misspent to argue to or from his convictions, or those of Luke and John, respecting any form. I seem to lose the substance in seeking the shadow. That for which Paul lived and died so gloriously; that for which Jesus gave himself to be crucified; the end that animated the thousand martyrs and heroes who have followed his steps, was to redeem us from a formal religion,

and teach us to seek our well-being in the formation of the soul. The whole world was full of idols and ordinances. The Jewish was a religion of forms; it was all body, it had no life, and the Almighty God was pleased to qualify and send forth a man to teach men that they must serve him with the heart; that only that life was religious which was thoroughly good; that sacrifice was smoke, and forms were shadows. This man lived and died true to this purpose; and now, with his blessed word and life before us, Christians must contend that it is a matter of vital importance,—really a duty, to commemorate him by a certain form, whether that form be agreeable to their understandings or not. Is not this to make vain the gift of God? Is not this to turn back the hand on the dial? Is not this to make men,—to make ourselves,—forget that not forms, but duties; not names, but righteousness and love are enjoined; and that in the eye of God there is no other measure of the value of any one form than the measure of its use?

I AM about to resign into your hands that office which you have confided to me. It is my desire, in the office of a Christian minister, to do nothing which I cannot do with my whole heart. Having said this, I have said all.

¶ There remain some practical objections to the ordinance, into which I shall not now enter. There is one on which I had intended to say a few words; I mean the unfavorable relation in which it places that numerous class of persons who abstain from it merely from disinclination to the rite.

¶ Influenced by these considerations, I have proposed to the brethren of the Church to drop the use of the elements and the claim of authority in the administration of this ordinance, and have suggested a mode in which a meeting for the same purpose might be held, free of objection.

¶ My brethren have considered my views with patience and candor, and have recommended, unanimously, an adherence to the present form. I have therefore been compelled to consider whether it becomes me to administer it. I am clearly of opinion I ought not. This discourse has already been so far extended that I can only say that the reason of my determination is shortly this: It is my desire, in the office of a Christian minister, to do nothing which I cannot do with my whole heart. Having said this, I have said all. I have no hostility to this institution; I am only stating my want of sympathy with it. Neither should I ever have obtruded this opinion upon other people, had I not been called by my office to administer it. That is the end of my opposition, that I am not interested in it. I am content that it stand to the end of the world, if it please men and please Heaven, and I shall rejoice in all the good it produces.

¶ As it is the prevailing opinion and feeling in our religious community that it is an indispensable part of the pastoral office to administer this ordinance, I am about to resign into your hands that office which you have confided to me. It has many duties for which I am feebly qualified. It has some which it will always be my delight to discharge according to my ability, wherever I exist. And whilst the recollection of its claims oppresses me with a sense of my unworthiness, I am consoled by the hope that no time and no change can deprive me of the satisfaction of pursuing and exercising its highest functions.

HISTORICAL DISCOURSE

FELLOW CITIZENS: The town of Concord begins, this day, the third century of its history. By a common consent, the people of New England, for a few years past, as the second centennial anniversary of each of its early settlements arrived, have seen fit to observe the day. You have thought it becoming to commemorate the planting of the first inland town. The sentiment is just, and the practice is wise. Our ears shall not be deaf to the voice of time. We will review the deeds of our fathers, and pass that just verdict on them we expect from posterity on our own.

¶ And yet, in the eternity of Nature, how recent our antiquities appear! The imagination is impatient of a cycle so short. Who can tell how many thousand years, every day, the clouds have shaded these fields with their purple awning? The river, by whose banks most of us were born, every winter, for ages, has spread its crust of ice over the great meadows which, in ages, it had formed. But the little society of men who now, for a few years, fish in this river, plough the fields it washes, mow the grass and reap the corn, shortly shall hurry from its banks as did their forefathers. "Man's life," said the Witan to the Saxon king, "is the sparrow that enters at a window, flutters round the house, and flies out at another, and none knoweth whence he came, or whither he goes." The more reason that we should give to our being what permanence we can;—that we should recall the Past, and expect the Future.

¶ Yet the race survives whilst the individual dies. In the country, without any interference of the law, the agricultural life favors the permanence of families. Here are still around me the lineal descendants of the first settlers of this town. Here is Blood, Flint, Willard, Meriam, Wood, Hosmer, Barrett, Wheeler, Jones, Brown, Buttrick, Brooks, Stow, Hoar, Heywood, Hunt, Miles,—the names of the inhabitants for the first thirty years; and the family is in many cases represented, when the name is not. If the name of Bulkeley is wanting, the honor you have done me this day, in making me your organ, testifies your persevering kindness to his blood.

¶ I shall not be expected, on this occasion, to repeat the details of that oppression which drove our fathers out hither. Yet the town of Concord was settled by a party of non-conformists, immediately from Great Britain. The best friend the Massachusetts colony had, though much against his will, was Archbishop Laud in England. In consequence of his famous proclamation setting up certain novelties in the rites of public worship, fifty godly ministers were suspended for contumacy, in the course of two years and a half. Hindered from speaking, some of these dared to print the reasons of their dissent, and were punished with imprisonment or mutilation. This severity brought some of the best men in England to overcome that natural repugnance to emigration which holds the serious and moderate of every nation to their own soil. Among the silenced clergymen was a distinguished minister of Woodhill, in Bedfordshire, Rev. Peter Bulkeley, descended from a noble family, honored for his own virtues, his learning and gifts as a preacher, and adding to his influence the weight of a large estate. Persecution readily knits friendship between its victims. Mr. Bulkeley, having turned his estate into money and set his face towards New England, was easily able to persuade a good number of planters to join him. They arrived in Boston in 1634. Probably there had been a previous correspondence with Governor Winthrop, and an agreement that they should settle at Musketaquid. With them joined Mr. Simon Willard, a merchant from Kent in England. They petitioned the General Court for a grant of a township, and on the 2d of Sep-

tember, 1635, corresponding in New Style to 12th September, two hundred years ago this day, leave to begin a plantation at Musketaquid was given to Peter Bulkeley, Simon Willard, and about twelve families more. A month later, Rev. John Jones and a large number of settlers destined for the new town arrived in Boston.

¶ The grant of the General Court was but a preliminary step. The green meadows of Musketaquid or *Grassy Brook* were far up in the woods, not to be reached without a painful and dangerous journey through an uninterrupted wilderness. They could cross the Massachusetts or Charles River, by the ferry at Newtown; they could go up the river as far as Watertown. But the Indian paths leading up and down the country were a foot broad. They must then plunge into the thicket, and with their axes cut a road for their teams, with their women and children and their household stuff, forced to make long circuits too, to avoid hills and swamps. Edward Johnson of Woburn has described in an affecting narrative their labors by the way. "Sometimes passing through thickets where their hands are forced to make way for their bodies' passage, and their feet clambering over the crossed trees, which when they missed, they sunk into an uncertain bottom in water, and wade up to their knees, tumbling sometimes higher, sometimes lower. At the end of this, they meet a scorching plain, yet not so plain but that the ragged bushes scratch their legs foully, even to wearing their stockings to their bare skin in two or three hours. Some of them, having no leggins, have had the blood trickle down at every step. And in time of summer, the sun casts such a reflecting heat from the sweet fern, whose scent is very strong, that some nearly fainted." They slept on the rocks, wherever the night found them. Much time was lost in travelling they knew not whither, when the sun was hidden by clouds; for "their compass miscarried in crowding through the bushes," and the Indian paths, once lost, they did not easily find.

¶ Johnson, relating undoubtedly what he had himself heard from the pilgrims, intimates that they consumed many days in exploring the country, to select the best place for the town. Their first temporary accommodation was rude enough. "After they have found a place of abode, they burrow themselves in the earth for their first shelter, under a hillside, and casting the soil aloft upon timbers, they make a fire against the earth, at the highest side. And thus these poor servants of Christ provide shelter for themselves, their wives and little ones, keeping off the short showers from their lodgings, but the long rains penetrate through, to their great disturbance in the night season. Yet in these poor wigwams they sing psalms, pray and praise their God, till they can provide them houses, which they could not ordinarily, till the earth, by the Lord's blessing brought forth bread to feed them. This they attain with sore travail, every one that can lift a hoe to strike into the earth standing stoutly to his labors, and tearing up the roots and bushes from the ground, which, the first year, yielded them a lean crop, till the sod of the earth was rotten, and therefore they were forced to cut their bread very thin for a long season. But the Lord is pleased to provide for them great store of fish in the spring-time, and especially, alewives, about the bigness of a herring." These served them also for manure. For flesh, they looked not for any, in those times, unless they could barter with the Indians for venison and raccoons. "Indian corn, even the coarsest, made as pleasant meal as rice." All kinds of garden fruits grew well, "and let no man," writes our pious chronicler, in another place, "make a jest of pumpkins, for with this fruit the Lord was pleased to feed his people until their corn and cattle were increased."

¶ The great cost of cattle, and the sickening of their cattle upon such wild fodder as was never cut before; the loss of their sheep and swine by wolves; the sufferings of the people in the great snows and cold soon following; and the

fear of the Pequots; are the other disasters enumerated by the historian.

¶ The hardships of the journey and of the first encampment are certainly related by their contemporary with some air of romance, yet they can scarcely be exaggerated. A march of a number of families with their stuff, through twenty miles of unknown forest, from a little rising town that had not much to spare, to an Indian town in the wilderness that had nothing, must be laborious to all, and for those who were new to the country and bred in softness, a formidable adventure. But the pilgrims had the preparation of an armed mind, better than any hardihood of body. And the rough welcome which the new land gave them was a fit introduction to the life they must lead in it.

¶ But what was their reception at Musketaquid? This was an old village of the Massachusetts Indians. Tahattawan, the Sachem, with Waban his son-in-law, lived near Nashawtuck, now Lee's Hill. Their tribe, once numerous, the epidemic had reduced. Here they planted, hunted and fished. The moose was still trotting in the country, and of his sinews they made their bowstring. Of the pith elder, that still grows beside our brooks, they made their arrow. Of the Indian hemp they spun their nets and lines for summer angling, and, in winter, they sat around holes in the ice, catching salmon, pickerel, breams and perch, with which our river abounded. Their physical powers, as our fathers found them, and before yet the English alcohol had proved more fatal to them than the English sword, astonished the white men. Their sight was so excellent, that, standing on the seashore, they often told of the coming of a ship at sea, sooner by one hour, yea, two hours' sail, than any Englishman that stood by, on purpose to look out. Roger Williams affirms that he has known them run between eighty and a hundred miles in a summer's day, and back again within two days. A little pounded parched corn or no-cake sufficed them on the march. To his bodily perfection the wild man added some noble traits of character. He was open as a child to kindness and justice. Many instances of his humanity were known to the Englishmen who suffered in the woods from sickness or cold. "When you came over the morning waters," said one of the Sachems, "we took you into our arms. We fed you with our best meat. Never went white man cold and hungry from Indian wigwam."

¶ The faithful dealing and brave good will, which, during the life of the friendly Massasoit, they uniformly experienced at Plymouth and at Boston, went to their hearts. So that the peace was made, and the ear of the savage already secured, before the pilgrims arrived at his seat of Musketaquid, to treat with him for his lands.

¶ It is said that the covenant made with the Indians, by Mr. Bulkeley and Major Willard, was made under a great oak, formerly standing near the site of the Middlesex Hotel. Our Records affirm that Squaw Sachem, Tahattawan, and Nimrod did sell a tract of six miles square to the English, receiving for the same, some fathoms of Wampumpeag, hatchets, hoes, knives, cotton cloth and shirts. Wibbacowet, the husband of Squaw Sachem, received a suit of cloth, a hat, a white linen band, shoes, stockings and a greatcoat; and, in conclusion, the said Indians declared themselves satisfied, and told the Englishmen they were welcome. And after the bargain was concluded, Mr. Simon Willard, pointing to the four corners of the world, declared that they had bought three miles from that place, east, west, north and south.

¶ The Puritans, to keep the remembrance of their unity one with another, and of their peaceful compact with the Indians, named their forest settlement CONCORD. They proceeded to build, under the shelter of the hill that extends for a mile along the north side of the Boston road, their first dwellings. The labors of a new plantation were paid by its excitements. I seem to see them, with their pious pastor, addressing themselves to the work of clearing the land. Natives of another hemisphere,

they beheld, with curiosity, all the pleasing features of the American forest. The landscape before them was fair, if it was strange and rude. The little flower which at this season stars our woods and roadsides with its profuse blooms, might attract even eyes as stern as theirs with its humble beauty. The useful pine lifted its cones into the frosty air. The maple, which is already making the forest gay with its orange hues, reddened over those houseless men. The majestic summits of Wachusett and Monadnoc towering in the horizon, invited the steps of adventure westward.

¶ As the season grew later, they felt its inconveniences. "Many were forced to go barefoot and bareleg, and some in time of frost and snow, yet were they more healthy than now they are." The land was low but healthy; and if, in common with all the settlements, they found the air of America very cold, they might say with Higginson, after his description of the other elements, that "New England may boast of the element of fire, more than all the rest; for all Europe is not able to afford to make so great fires as New England. A poor servant, that is to possess but fifty acres, may afford to give more wood for fire as good as the world yields, than many noblemen in England." Many were their wants, but more their privileges. The light struggled in through windows of oiled paper, but they read the word of God by it. They were fain to make use of their knees for a table, but their limbs were their own. Hard labor and spare diet they had, and off wooden trenchers, but they had peace and freedom, and the wailing of the tempest in the woods sounded kindlier in their ear than the smooth voice of the prelates, at home, in England. "There is no people," said their pastor to his little flock of exiles, "but will strive to excel in something. What can we excel in, if not in holiness? If we look to number, we are the fewest; if to strength, we are the weakest; if to wealth and riches, we are the poorest of all the people of God through the whole world. We cannot excel nor so much as equal other people in these things; and if we come short in grace and holiness too, we are the most despicable people under heaven. Strive we, therefore, herein to excel, and suffer not this crown to be taken away from us." The sermon fell into good and tender hearts; the people conspired with their teacher. Their religion was sweetness and peace amidst toil and tears. And, as we are informed, "the edge of their appetite was greater to spiritual duties at their first coming, in time of wants, than afterwards."

THE physical powers of the Indians, as our fathers found them, and before yet the English alcohol had proved more fatal to them than the English sword, astonished the white men. Standing on the seashore, they often told of the coming of a ship at sea, sooner by one hour, yea, two hours' sail, than any Englishman that stood by.

¶ The original Town Records, for the first thirty years, are lost. We have records of marriages and deaths, beginning nineteen years after the settlement; and copies of some of the doings of the town in regard to territory, of the same date. But the original distribution of the land, or an account of the principles on which it was divided, are not preserved. Agreeably to the custom of the times, a large portion was reserved to the public, and it appears from a petition of some newcomers, in 1643, that a part had been divided among the first settlers without price, on the single condition of improving it. Other portions seem to have been successively divided off and granted to individuals, at the rate of sixpence or a shilling an acre. But, in the first years, the land would not pay the necessary public charges, and they seem to

have fallen heavily on the few wealthy planters. Mr. Bulkeley, by his generosity, spent his estate, and, doubtless in consideration of his charges, the General Court, in 1639, granted him 300 acres towards Cambridge; and to Mr. Spencer, probably for the like reason, 300 acres by the Alewife River. In 1638, 1200 acres were granted to Governor Winthrop, and 1000 to Thomas Dudley, of the lands adjacent to the town, and Governor Winthrop selected as a building spot the land near the house of Captain Humphrey Hunt. The first record now remaining is that of a reservation of land for the minister, and the appropriation of new lands as commons or pastures to some poor men. At the same date, in 1654, the town having divided itself into three districts, called the North, South and East quarters, ordered, "that the North quarter are to keep and maintain all their highways and bridges over the great river, in their quarter, and, in respect of the greatness of their charge thereabout, and in regard of the ease of the East quarter above the rest, in their highways, they are to allow the North quarter £3."

¶ Fellow citizens, this first recorded political act of our fathers, this tax assessed on its inhabitants by a town, is the most important event in their civil history, implying, as it does, the exercise of a sovereign power, and connected with all the immunities and powers of a corporate town in Massachusetts. The greater speed and success that distinguish the planting of the human race in this country, over all other plantations in history, owe themselves mainly to the new subdivisions of the State into small corporations of land and power. It is vain to look for the inventor. No man made them. Each of the parts of that perfect structure grew out of the necessities of an instant occasion. The germ was formed in England. The charter gave to the freemen of the Company of Massachusetts Bay the election of the Governor and Council of Assistants. It moreover gave them the power of prescribing the manner in which freemen should be elected; and ordered that all fundamental laws should be enacted by the freemen of the colony. But the Company removed to New England; more than one hundred freemen were admitted the first year, and it was found inconvenient to assemble them all. And when, presently, the design of the colony began to fulfil itself, by the settlement of new plantations in the vicinity of Boston, and parties, with grants of land, straggled into the country to truck with the Indians and to clear the land for their own benefit, the Governor and freemen in Boston found it neither desirable nor possible to control the trade and practices of these farmers. What could the body of freemen, meeting four times a year, at Boston, do for the daily wants of the planters at Musketaquid? The wolf was to be killed; the Indian to be watched and resisted; wells to be dug; the forest to be felled; pastures to be cleared; corn to be raised; roads to be cut; town and farm lines to be run. These things must be done, govern who might. The nature of man and his condition in the world, for the first time within the period of certain history, controlled the formation of the State. The necessity of the colonists wrote the law. Their wants, their poverty, their manifest convenience made them bold to ask of the Governor and of the General Court, immunities, and, to certain purposes, sovereign powers. The townsmen's words were heard and weighed, for all knew that it was a petitioner that could not be slighted; it was the river, or the winter, or famine, or the Pequots, that spoke through them to the Governor and Council of Massachusetts Bay. Instructed by necessity, each little company organized itself after the pattern of the larger town, by appointing its constable, and other petty half-military officers. As early as 1633, the office of townsman or *selectman* appears, who seems first to have been appointed by the General Court, as here, at Concord, in 1639. In 1635, the Court say, "whereas particular towns have many things which concern only themselves, it is Ordered, that the freemen of every town shall have power to

dispose of their own lands, and woods, and choose their own particular officers." This pointed chiefly at the office of constable, but they soon chose their own selectmen, and very early assessed taxes; a power at first resisted, but speedily confirmed to them.

¶ Meantime, to this paramount necessity, a milder and more pleasing influence was joined. I esteem it the happiness of this country that its settlers, whilst they were exploring their granted and natural rights and determining the power of the magistrate, were united by personal affection. Members of a church before whose searching covenant all rank was abolished, they stood in awe of each other, as religious men. They bore to John Winthrop, the Governor, a grave but hearty kindness. For the first time, men examined the powers of the chief whom they loved and revered. For the first time, the ideal social compact was real. The bands of love and reverence held fast the little state, whilst they untied the great cords of authority to examine their soundness and learn on what wheels they ran. They were to settle the internal constitution of the towns, and, at the same time, their power in the commonwealth. The Governor conspires with them in limiting his claims to their obedience, and values much more their love than his chartered authority. The disputes between that forbearing man and the deputies are like the quarrels of girls, so much do they turn upon complaints of unkindness, and end in such loving reconciliations. It was on doubts concerning their own power, that, in 1634, a committee repaired to him for counsel, and he advised, seeing the freemen were grown so numerous, to send deputies from every town once in a year to revise the laws and to assess all monies. And the General Court thus constituted, only needed to go into separate session from the Council, as they did in 1644, to become essentially the same assembly they are this day.

¶ By this course of events, Concord and the other plantations found themselves separate and independent of Boston, with certain rights of their own, which, what they were, time alone could fully determine; enjoying, at the same time, a strict and loving fellowship with Boston, and sure of advice and aid, on every emergency. Their powers were speedily settled by obvious convenience, and the towns learned to exercise a sovereignty in the laying of taxes; in the choice of their deputy to the house of representatives; in the disposal of the town lands; in the care of public worship, the school and the poor; and, what seemed of at least equal importance, to exercise the right of expressing an opinion on every question before the country. In a town-meeting, the great secret of political science was uncovered, and the problem solved, how to give every individual his fair weight in the government, without any disorder from numbers. In a town-meeting, the roots of society were reached. Here the rich gave counsel, but the poor also; and moreover, the just and the unjust. He is ill informed who expects, on running down the Town Records for two hundred years, to find a church of saints, a metropolis of patriots, enacting wholesome and creditable laws. The constitution of the towns forbid it. In this open democracy, every opinion had utterance; every objection, every fact, every acre of land, every bushel of rye, its entire weight. The moderator was the passive mouth-piece, and the vote of the town, like the vane on the turret overhead, free for every wind to turn, and always turned by the last and strongest breath. In these assemblies, the public weal, the call of interest, duty, religion, were heard; and every local feeling, every private grudge, every suggestion of petulance and ignorance, were not less faithfully produced. Wrath and love came up to town-meeting in company. By the law of 1641, every man—freeman or not—inhabitant or not—might introduce any business into a public meeting. Not a complaint occurs in all the volumes of our Records, of any inhabitant being hindered from speaking, or suffering from any violence or usurpation of any class. The negative ballot of a ten-

shilling freeholder was as fatal as that of the honored owner of Blood's Farms or Willard's Purchase. A man felt himself at liberty to exhibit, at town-meeting, feelings and actions that he would have been ashamed of anywhere but amongst his neighbors. Individual protests are frequent. Peter Wright [1705] desired his dissent might be recorded from the town's grant to John Shepard. In 1795, several town-meetings are called, upon the compensation to be made to a few proprietors for land taken in making a bridle-road; and one of them demanding large damages, many offers were made him in town-meeting, and refused; "which the town thought very unreasonable." The matters there debated are such as to invite very small considerations. The ill-spelled pages of the Town Records contain the result. I shall be excused for confessing that I have set a value upon any symptom of meanness and private pique which I have met with in these antique books, as proof that justice was done; that if the results of our history are approved as wise and good, it was yet a free strife; if the good counsel prevailed, the sneaking counsel did not fail to be suggested; freedom and virtue, if they triumphed, triumphed in a fair field. And so be it an everlasting testimony for them, and so much ground of assurance of man's capacity for self-government.

¶ It is the consequence of this institution that not a school-house, a public pew, a bridge, a pound, a mill-dam, hath been set up, or pulled down, or altered, or bought, or sold, without the whole population of this town having a voice in the affair. A general contentment is the result. And the people truly feel that they are lords of the soil. In every winding road, in every stone fence, in the smokes of the poor-house chimney, in the clock on the church, they read their own power, and consider, at leisure, the wisdom and error of their judgments.

¶ The British government has recently presented to the several public libraries of this country, copies of the splendid edition of the Domesday Book, and other ancient public records of England. I cannot but think that it would be a suitable acknowledgment of this national munificence, if the records of one of our towns,—of this town, for example,—should be printed, and presented to the governments of Europe; to the English nation, as a thank-offering, and as a certificate of the progress of the Saxon race; to the Continental nations as a lesson of humanity and love. Tell them, the Union has twenty-four States, and Massachusetts is one. Tell them, Massachusetts has three hundred towns, and Concord is one; that in Concord are five hundred ratable polls, and every one has an equal vote.

¶ About ten years after the planting of Concord, efforts began to be made to civilize the Indians, and "to win them to the knowledge of the true God." This indeed, in so many words, is expressed in the charter of the colony as one of its ends; and this design is named first in the printed "Considerations," that inclined Hampden, and determined Winthrop and his friends, to come hither. The interest of the Puritans in the natives was heightened by a suspicion at that time prevailing that these were the lost ten tribes of Israel. The man of the woods might well draw on himself the compassion of the planters. His erect and perfect form, though disclosing some irregular virtues, was found joined to a dwindled soul. Master of all sorts of wood-craft, he seemed a part of the forest and the lake, and the secret of his amazing skill seemed to be that he partook of the nature and fierce instincts of the beasts he slew. Those who dwelled by ponds and rivers had some tincture of civility, but the hunters of the tribe were found intractable at catechism. Thomas Hooker anticipated the opinion of Humboldt, and called them "the ruins of mankind."

¶ Early efforts were made to instruct them, in which Mr. Bulkeley, Mr. Flint, and Captain Willard, took an active part. In 1644, Squaw Sachem, the widow of Nanepashemet, the great Sachem of Concord and Mystic, with two sachems of Wachusett, made a for-

mal submission to the English government, and intimated their desire, "as opportunity served, and the English lived among them, to learn to read God's word, and know God aright;" and the General Court acted on their request. John Eliot, in October, 1646, preached his first sermon in the Indian language at Noonantum; Waban, Tahattawan, and their sannaps, going thither from Concord to hear him. There under the rubbish and ruins of barbarous life, the human heart heard the voice of love, and awoke as from a sleep. The questions which the Indians put betray their reason and their ignorance. "Can Jesus Christ understand prayers in the Indian language?" "If a man be wise, and his sachem weak, must he obey him?" At a meeting which Eliot gave to the squaws apart, the wife of Wampooas propounded the question, "Whether do I pray when my husband prays, if I speak nothing as he doth, yet if I like what he saith?"—"which questions were accounted of by some, as part of the whitenings of the harvest toward." Tahattawan, our Concord sachem, called his Indians together, and bid them not oppose the courses which the English were taking for their good; for, said he, all the time you have lived after the Indian fashion, under the power of the higher sachems, what did they care for you? They took away your skins, your kettles and your wampum, at their own pleasure, and this was all they regarded. But you may see the English mind no such things, but only seek your welfare, and instead of taking away, are ready to give to you. Tahattawan and his son-in-law Waban, besought Eliot to come and preach to them at Concord, and here they entered, by his assistance, into an agreement to twenty-nine rules, all breathing a desire to conform themselves to English customs. They requested to have a town given them within the bounds of Concord, near unto the English. When this question was propounded by Tahattawan, he was asked, why he desired a town so near, when there was more room for them up in the country? The sachem replied that he knew if the Indians dwelt far from the English, they would not so much care to pray, nor could they be so ready to hear the word of God, but would be, all one, Indians still; but dwelling near the English, he hoped it might be otherwise with them then. We, who see in the squalid remnants of the twenty tribes of Massachusetts, the final failure of this benevolent enterprise, can hardly learn without emotion the earnestness with which the most sensible individuals of the copper race held on to the new hope they had conceived, of being elevated to equality with their civilized brother. It is piteous to see their self-distrust in their request to remain near the English, and their unanimous entreaty to Captain Willard, to be their Recorder, being very solicitous that what they did agree upon might be faithfully kept without alteration. It was remarkable that the preaching was not wholly new to them. "Their forefathers," the Indians told Eliot, "did know God, but after this, they fell into a deep sleep, and when they did awake, they quite forgot him."

¶ At the instance of Eliot, in 1651, their desire was granted by the General Court, and Nashobah, lying near Nagog Pond, now partly in Littleton, partly in Acton, became an Indian town, where a Christian worship was established under an Indian ruler and teacher. Wilson relates that, at their meetings, "the Indians sung a psalm, made Indian by Eliot, in one of our ordinary English tunes, melodiously." Such was, for half a century, the success of the general enterprise, that, in 1676, there were five hundred and sixty-seven praying Indians, and in 1689, twenty-four Indian preachers, and eighteen assemblies.

¶ Meantime, Concord increased in territory and population. The lands were divided; highways were cut from farm to farm, and from this town to Boston. A military company had been organized in 1636. The Pequots, the terror of the farmer, were exterminated in 1637. Captain Underhill, in 1638, declared, that "the new plantations of Dedham

and Concord do afford large accommodation, and will contain abundance of people." In 1639, our first selectmen, Mr. Flint, Lieutenant Willard, and Richard Griffin were appointed. And in 1640, when the colony rate was £1200, Concord was assessed £50. The country already began to yield more than was consumed by the inhabitants. The very great immigration from England made the lands more valuable every year, and supplied a market for the produce. In 1643, the colony was so numerous that it became expedient to divide it into four counties, Concord being included in Middlesex. In 1644, the town contained sixty families.

¶ But, in 1640, all immigration ceased, and the country produce and farm-stock depreciated. Other difficulties accrued. The fish, which had been the abundant manure of the settlers, was found to injure the land. The river, at this period, seems to have caused some distress now by its overflow, now by its drought. A cold and wet summer blighted the corn; enormous flocks of pigeons beat down and eat up all sorts of English grain; and the crops suffered much from mice. New plantations and better land had been opened, far and near; and whilst many of the colonists at Boston, thought to remove, or did remove to England, the Concord people became uneasy, and looked around for new seats. In 1643, one seventh or one eighth part of the inhabitants went to Connecticut with Reverend Mr. Jones, and settled Fairfield. Weakened by this loss, the people begged to be released from a part of their rates, to which the General Court consented. Mr. Bulkeley dissuaded his people from removing, and admonished them to increase their faith with their griefs. Even this check which befell them acquaints us with the rapidity of their growth, for the good man, in dealing with his people, taxes them with luxury. "We pretended to come hither," he says, "for ordinances; but now ordinances are light matters with us; we are turned after the prey. We have among us excess and pride of life; pride in apparel, daintiness in diet, and that in those who, in times past, would have been satisfied with bread. *This is the sin of the lowest of the people.*" Better evidence could not be desired of the rapid growth of the settlement.

¶ The check was but momentary. The earth teemed with fruits. The people on the bay built ships, and found the way to the West Indies, with pipe-staves, lumber and fish; and the country people speedily learned to supply themselves with sugar, tea and molasses. The college had been already gathered in 1638. Now the schoolhouse went up. The General Court, in 1647, "to the end that learning may not be buried in the graves of our forefathers, Ordered, that every township, after the Lord had increased them to the number of fifty house-holders, shall appoint one to teach all children to write and read; and where any town shall increase to the number of one hundred families, they shall set up a Grammar school, the masters thereof being able to instruct youth so far as they may be fitted for the University." With these requirements Concord not only complied, but, in 1653, subscribed a sum for several years to the support of Harvard College.

¶ But a new and alarming public distress retarded the growth of this, as of the sister towns, during more than twenty years from 1654 to 1676. In 1654, the four united New England Colonies agreed to raise 270 foot and 40 horse, to reduce Ninigret, Sachem of the Niantics, and appointed Major Simon Willard, of this town, to the command. This war seems to have been pressed by three of the colonies, and reluctantly entered by Massachusetts. Accordingly, Major Willard did the least he could, and incurred the censure of the Commissioners, who write to their "loving friend Major Willard," "that they leave to his consideration the inconveniences arising from his non-attendance to his commission." This expedition was but the introduction of the war with King Philip. In 1670, the Wampanoags began to grind their hatchets, and mend their guns, and insult the Eng-

lish. Philip surrendered seventy guns to the Commissioners in Taunton Meeting-house, but revenged his humiliation a few years after, by carrying fire and the tomahawk into the English villages. From Narragansett to the Connecticut River, the scene of war was shifted as fast as these red hunters could traverse the forest. Concord was a military post. The inactivity of Major Willard, in Ninigret's war, had lost him no confidence. He marched from Concord to Brookfield, in season to save the people whose houses had been burned, and who had taken shelter in a fortified house. But he fought with disadvantage against an enemy who must be hunted before every battle. Some flourishing towns were burned. John Monoco, a formidable savage, boasted that "he had burned Medfield and Lancaster, and would burn Groton, Concord, Watertown and Boston;" adding, "what me will, me do." He did burn Groton, but before he had executed the remainder of his threat he was hanged, in Boston, in September, 1676.

Of late years, the growth of Concord has been slow. The natural increase of her population is drained by the constant emigration of the youth. Her sons have settled the region around us, and far from us. Their wagons have rattled down the remote western hills.

¶ A still more formidable enemy was removed, in the same year, by the capture of Canonchet, the faithful ally of Philip, who was soon afterwards shot at Stonington. He stoutly declared to the Commissioners that "he would not deliver up a Wampanoag, nor the paring of a Wampanoag's nail," and when he was told that his sentence was death, he said "he liked it well that he was to die before his heart was soft, or he had spoken anything unworthy of himself."

¶ We know beforehand who must conquer in that unequal struggle. The red man may destroy here and there a straggler, as a wild beast may; he may fire a farm-house, or a village; but the association of the white men and their arts of war give them an overwhelming advantage, and in the first blast of their trumpet we already hear the flourish of victory. I confess what chiefly interests me, in the annals of that war, is the grandeur of spirit exhibited by a few of the Indian chiefs. A nameless Wampanoag who was put to death by the Mohicans, after cruel tortures, was asked by his butchers, during the torture, how he liked the war?—he said, "he found it as sweet as sugar was to Englishmen."

¶ The only compensation which war offers for its manifold mischiefs, is in the great personal qualities to which it gives scope and occasion. The virtues of patriotism and of prodigious courage and address were exhibited on both sides, and, in many instances, by women. The historian of Concord has preserved an instance of the resolution of one of the daughters of the town. Two young farmers, Abraham and Isaac Shepherd, had set their sister Mary, a girl of fifteen years, to watch whilst they threshed grain in the barn. The Indians stole upon her before she was aware, and her brothers were slain. She was carried captive into the Indian country, but, at night, whilst her captors were asleep, she plucked a saddle from under the head of one of them, took a horse they had stolen from Lancaster, and having girt the saddle on, she mounted, swam across the Nashua River, and rode through the forest to her home.

¶ With the tragical end of Philip, the war ended. Beleaguered in his own country, his corn cut down, his piles of meal and other provision wasted by the English, it was only a great thaw in

January, that, melting the snow and opening the earth, enabled his poor followers to come at the ground-nuts, else they had starved. Hunted by Captain Church, he fled from one swamp to another; his brother, his uncle, his sister, and his beloved squaw being taken or slain, he was at last shot down by an Indian deserter, as he fled alone in the dark of the morning, not far from his own fort.

¶ Concord suffered little from the war. This is to be attributed no doubt, in part, to the fact that troops were generally quartered here, and that it was the residence of many noted soldiers. Tradition finds another cause in the sanctity of its minister. The elder Bulkeley was gone. In 1659, his bones were laid at rest in the forest. But the mantle of his piety and of the people's affection fell upon his son Edward, the fame of whose prayers, it is said, once saved Concord from an attack of the Indian. A great defense undoubtedly was the village of Praying Indians, until this settlement fell a victim to the envenomed prejudice against their countrymen. The worst feature in the history of those years, is, that no man spake for the Indian. When the Dutch, or the French, or the English royalist disagreed with the Colony, there was always found a Dutch, or French, or tory party, —an earnest minority,—to keep things from extremity. But the Indian seemed to inspire such a feeling as the wild beast inspires in the people near his den. It is the misfortune of Concord to have permitted a disgraceful outrage upon the friendly Indians settled within its limits, in February, 1676, which ended in their forcible expulsion from the town.

¶ This painful incident is but too just an example of the measure which the Indians have generally received from the whites. For them the heart of charity, of humanity, was stone. After Philip's death, their strength was irrecoverably broken. They never more disturbed the interior settlements, and a few vagrant families, that are now pensioners on the bounty of Massachusetts, are all that is left of the twenty tribes.

"Alas! for them—their day is o'er,
Their fires are out from hill and shore,
No more for them the wild deer bounds,
The plough is on their hunting grounds;
The pale man's axe rings in their woods,
The pale man's sail skims o'er their floods,
Their pleasant springs are dry."

¶ I turn gladly to the progress of our civil history. Before 1666, 15,000 acres had been added by grants of the General Court to the original territory of the town, so that Concord then included the greater part of the towns of Bedford, Acton, Lincoln and Carlisle.

¶ In the great growth of the country, Concord participated, as is manifest from its increasing polls and increased rates. Randolph at this period writes to the English government, concerning the country towns: "The farmers are numerous and wealthy, live in good houses; are given to hospitality; and make good advantage by their corn, cattle, poultry, butter and cheese." Edward Bulkeley was the pastor, until his death, in 1696. His youngest brother, Peter, was deputy from Concord, and was chosen speaker of the house of deputies in 1676. The following year, he was sent to England, with Mr. Stoughton, as agent for the Colony; and on his return, in 1685, was a royal councillor. But I am sorry to find that the servile Randolph speaks of him with marked respect. It would seem that his visit to England had made him a courtier. In 1689, Concord partook of the general indignation of the province against Andros. A company marched to the capital under Lieutenant Heald, forming a part of that body concerning which we are informed, "the country people came armed into Boston, on the afternoon (of Thursday, 18th April) in such rage and heat, as made us all tremble to think what would follow; for nothing would satisfy them but that the governor must be bound in chains or cords, and put in a more secure place, and that they would see done before they went away; and to satisfy them he was guarded by them to the fort." But the Town Records of that day confine themselves to descrip-

tions of lands, and to conferences with the neighboring towns to run boundary lines. In 1699, so broad was their territory, I find the selectmen running the lines with Chelmsford, Cambridge and Watertown. Some interesting peculiarities in the manners and customs of the time appear in the town's books. Proposals of marriage were made by the parents of the parties, and minutes of such private agreements sometimes entered on the clerk's records. The public charity seems to have been bestowed in a manner now obsolete. The town lends its commons as pastures, to poor men; and "being informed of the great present want of Thomas Pellit, gave order to Stephen Hosmer to deliver a town cow, of a black color, with a white face, unto said Pellit, for his present supply."

¶ From the beginning to the middle of the eighteenth century, our records indicate no interruption of the tranquillity of the inhabitants, either in church or in civil affairs. After the death of Rev. Mr. Estabrook, in 1711, it was propounded at the town-meeting, "whether one of the three gentlemen lately improved here in preaching, namely, Mr. John Whiting, Mr. Holyoke and Mr. Prescott, shall be now chosen in the work of the ministry? Voted affirmatively." Mr. Whiting, who was chosen, was, we are told in his epitaph, "a universal lover of mankind." The charges of education and legislation, at this period, seem to have afflicted the town; for they vote to petition the General Court to be eased of the law relating to providing a schoolmaster; happily, the Court refused; and in 1712, the selectmen agreed with Captain James Minott, "for his son Timothy to keep the school at the school-house for the town of Concord, for half a year beginning 2d June; and if any scholar shall come, within the said time, for larning exceeding his son's ability, the said Captain doth agree to instruct them himself in the tongues, till the above said time be fulfilled; for which service, the town is to pay Captain Minott ten pounds." Captain Minott seems to have served our prudent fathers in the double capacity of teacher and representative. It is an article in the selectmen's warrant for the town-meeting, "to see if the town will lay in for a representative not exceeding four pounds." Captain Minott was chosen, and after the General Court was adjourned received of the town for his services, an allowance of three shillings per day. The country was not yet so thickly settled but that the inhabitants suffered from wolves and wildcats, which infested the woods; since bounties of twenty shillings are given as late as 1735, to Indians and whites, for the heads of these animals, after the constable has cut off the ears.

¶ Mr. Whiting was succeeded in the pastoral office by Rev. Daniel Bliss, in 1738. Soon after his ordination, the town seems to have been divided by ecclesiastical discords. In 1741, the celebrated Whitfield preached here, in the open air, to a great congregation. Mr. Bliss heard that great orator with delight, and by his earnest sympathy with him, in opinion and practice, gave offence to a part of his people. Party and mutual councils were called, but no grave charge was made good against him. I find, in the Church Records, the charges preferred against him, his answer thereto, and the result of the Council. The charges seem to have been made by the lovers of order and moderation against Mr. Bliss, as a favorer of religious excitements. His answer to one of the counts breathes such true piety that I cannot forbear to quote it. The ninth allegation is "That in praying for himself, in a church-meeting, in December last, he said, 'he was a poor vile worm of the dust, that was allowed as Mediator between God and this people.' " To this Mr. Bliss replied, "In the prayer you speak of, Jesus Christ was acknowledged as the only Mediator between God and Man; at which time, I was filled with wonder, that such a sinful and worthless worm as I am, was allowed to represent Christ, in any manner, even so far as to be bringing the petitions and thank-offerings of the people unto God, and God's will and truths to the people; and used the word Medi-

ator in some differing light from that you have given it; but I confess I was soon uneasy that I had used the word, lest some would put a wrong meaning thereupon." The Council admonished Mr. Bliss of some improprieties of expression, but bore witness to his purity and fidelity in his office. In 1764, Whitfield preached again at Concord, on Sunday afternoon; Mr. Bliss preached in the morning, and the Concord people thought their minister gave them the better sermon of the two. It was also his last.

¶ The planting of the colony was the effect of religious principle. The Revolution was the fruit of another principle,—the devouring thirst for justice. From the appearance of the article in the Selectmen's warrant, in 1765, "to see if the town will give the Representative any instructions about any important affair to be transacted by the General Court, concerning the Stamp Act," to the peace of 1783, the Town Records breathe a resolute and warlike spirit, so bold from the first as hardly to admit of increase.

¶ It would be impossible on this occasion to recite all these patriotic papers. I must content myself with a few brief extracts. On the 24th January, 1774, in answer to letters received from the united committees of correspondence, in the vicinity of Boston, the town say:

¶ "We cannot possibly view with indifference the past and present obstinate endeavors of the enemies of this, as well as the mother country, to rob us of those rights, that are the distinguishing glory and felicity of this land; rights, that we are obliged to no power, under heaven, for the enjoyment of; as they are the fruit of the heroic enterprises of the first settlers of these American colonies. And though we cannot but be alarmed at the great majority, in the British parliament, for the imposition of unconstitutional taxes on the colonies, yet, it gives life and strength to every attempt to oppose them, that not only the people of this, but the neighboring provinces are remarkably united in the important and interesting opposition, which, as it succeeded before, in some measure, by the blessing of heaven, so, we cannot but hope it will be attended with still greater success, in future.

¶ "*Resolved*, That these colonies have been and still are illegally taxed by the British parliament, as they are not virtually represented therein.

¶ "That the purchasing commodities subject to such illegal taxation is an explicit, though an impious and sordid resignation of the liberties of this free and happy people.

¶ "That, as the British parliament have empowered the East India Company to export their tea into America, for the sole purpose of raising a revenue from hence; to render the design abortive, we will not, in this town, either by our selves, or any from or under us, buy, sell, or use any of the East India Company's tea, or any other tea, whilst there is a duty for raising a revenue thereon in America; neither will we suffer any such tea to be used in our families.

¶ "That all such persons as shall purchase, sell or use any such tea, shall, for the future, be deemed unfriendly to the happy constitution of this country.

¶ "That, in conjunction with our brethren in America, we will risk our fortunes, and even our lives, in defence of his majesty, King George the Third, his person, crown and dignity; and will, also, with the same resolution, as his freeborn subjects in this country, to the utmost of our power, defend all our rights inviolate to the latest posterity.

¶ "That, if any person or persons, inhabitants of this province, so long as there is a duty on tea, shall import any tea from the India House, in England, or be factors for the East India Company, we will treat them, in an eminent degree, as enemies to their country, and with contempt and detestation.

¶ "That we think it our duty, at this critical time of our public affairs, to return our hearty thanks to the town of Boston, for every rational measure they have taken for the preservation or recovery of our invaluable rights and liberties infringed upon; and we hope,

should the state of our public affairs require it, that they will still remain watchful and persevering; with a steady zeal to espy out everything that shall have a tendency to subvert our happy constitution."

¶ On the 27th June, near three hundred persons, upwards of twenty-one years of age, inhabitants of Concord, entered into a covenant, "solemnly engaging with each other, in the presence of God, to suspend all commercial intercourse with Great Britain, until the act for blocking the harbor of Boston be repealed; and neither to buy nor consume any merchandise imported from Great Britain, nor to deal with those who do."

¶ In August, a County Convention met in this town, to deliberate upon the alarming state of public affairs, and published an admirable report. In September, incensed at the new royal law which made the judges dependent on the crown, the inhabitants assembled on the common, and forbade the justices to open the court of sessions. This little town then assumed the sovereignty. It was judge and jury and council and king. On the 26th of the month, the whole town resolved itself into a committee of safety, "to suppress all riots, tumults, and disorders in said town, and to aid all untainted magistrates in the execution of the laws of the land." It was then voted, to raise one or more companies of minute-men, by enlistment, to be paid by the town whenever called out of town; and to provide arms and ammunition, "that those who are unable to purchase them themselves, may have the advantage of them, if necessity calls for it." In October, the Provincial Congress met in Concord. John Hancock was President. This body was composed of the foremost patriots, and adopted those efficient measures whose progress and issue belong to the history of the nation.

¶ The clergy of New England were, for the most part, zealous promoters of the Revolution. A deep religious sentiment sanctified the thirst for liberty. All the military movements in this town were solemnized by acts of public worship. In January, 1775, a meeting was held for the enlisting of minute-men. Reverend William Emerson, the chaplain of the Provincial Congress, preached to the people. Sixty men enlisted and, in a few days, many more. On 13th March, at a general review of all the military companies, he preached to a very full assembly, taking for his text, 2 Chronicles xiii. 12, "And, behold, God himself is with us for our captain, and his priests with sounding trumpets to cry alarm against you." It is said that all the services of that day made a deep impression on the people, even to the singing of the psalm.

¶ A large amount of military stores had been deposited in this town, by order of the Provincial Committee of Safety. It was to destroy those stores that the troops who were attacked in this town, on the 19th April, 1775, were sent hither by General Gage.

¶ The story of that day is well known. In this peaceful fields, for the first time since a hundred years, the drum and alarm-gun were heard, and the farmers snatched down their rusty firelocks from the kitchen walls, to make good the resolute words of their town debates. In the field where the western abutment of the old bridge may still be seen, about half a mile from this spot, the first organized resistance was made to the British arms. There the Americans first shed British blood. Eight hundred British soldiers, under the command of Lieutenant-Colonel Francis Smith, had marched from Boston to Concord; at Lexington had fired upon the brave handful of militia, for which a speedy revenge was reaped by the same militia in the afternoon. When they entered Concord, they found the militia and minute-men assembled under the command of Colonel Barrett and Major Buttrick. This little battalion, though in their hasty council some were urgent to stand their ground, retreated before the enemy to the high land on the other bank of the river, to wait for reinforcement. Colonel Barrett ordered the troops not to fire, unless fired upon. The British following them

across the bridge, posted two companies, amounting to about one hundred men, to guard the bridge, and secure the return of the plundering party. Meantime, the men of Acton, Bedford, Lincoln and Carlisle, all once included in Concord, remembering their parent town in the hour of danger, arrived and fell into the ranks so fast, that Major Buttrick found himself superior in number to the enemy's party at the bridge. And when the smoke began to rise from the village where the British were burning cannon-carriages and military stores, the Americans resolved to force their way into town. The English beginning to pluck up some of the planks of the bridge, the Americans quickened their pace, and the British fired one or two shots up the river (our ancient friend here, Master Blood, saw the water struck by the first ball); then a single gun, the ball from which wounded Luther Blanchard and Jonas Brown, and then a volley, by which Captain Isaac Davis and Abner Hosmer of Acton were instantly killed. Major Buttrick leaped from the ground, and gave the command to fire, which was repeated in a simultaneous cry by all his men. The Americans fired, and killed two men and wounded eight. A head-stone and a foot-stone, on this bank of the river, mark the place where these first victims lie. The British retreated immediately towards the village, and were joined by two companies of grenadiers, whom the noise of the firing had hastened to the spot. The militia and minute-men—every one from that moment being his own commander—ran over the hills opposite the battle-field, and across the great fields, into the east quarter of the town, to waylay the enemy, and annoy his retreat. The British, as soon as they were rejoined by the plundering detachment, began that disastrous retreat to Boston, which was an omen to both parties of the event of the war.

¶ In all the anecdotes of that day's events we may discern the natural action of the people. It was not an extravagant ebullition of feeling, but might have been calculated on by any one acquainted with the spirits and habits of our community. Those poor farmers who came up, that day, to defend their native soil, acted from the simplest instincts. They did not know it was a deed of fame they were doing. These men did not babble of glory. They never dreamed their children would contend who had done the most. They supposed they had a right to their corn and their cattle, without paying tribute to any but their own governors. And as they had no fear of man, they yet did have a fear of God. Captain Charles Miles, who was wounded in the pursuit of the enemy, told my venerable friend who sits by me, that "he went to the services of that day, with the same seriousness and acknowledgment of God, which he carried to church."

¶ The presence of these aged men who were in arms on that day seems to bring us nearer to it. The benignant Providence which has prolonged their lives to this hour gratifies the strong curiosity of the new generation. The Pilgrims are gone; but we see what manner of persons they were who stood in the worst perils of the Revolution. We hold by the hand the last of the invincible men of old, and confirm from living lips the sealed records of time.

¶ And you, my fathers, whom God and the history of your country have ennobled, may well bear a chief part in keeping this peaceful birthday of our town. You are indeed extraordinary heroes. If ever men in arms had a spotless cause, you had. You have fought a good fight. And having quit you like men in the battle, you have quit yourselves like men in your virtuous families; in your cornfields; and in society. We will not hide your honorable gray hairs under perishing laurel-leaves, but the eye of affection and veneration follows you. You are set apart—and forever—for the esteem and gratitude of the human race. To you belongs a better badge than stars and ribbons. This prospering country is your ornament, and this expanding nation is multiplying your praise with millions of tongues.

¶ The agitating events of those days

were duly remembered in the church. On the second day after the affray, divine service was attended, in this house, by 700 soldiers. William Emerson, the pastor, had a hereditary claim to the affection of the people, being descended in the fourth generation from Edward Bulkeley, son of Peter. But he had merits of his own. The cause of the Colonies was so much in his heart that he did not cease to make it the subject of his preaching and his prayers, and is said to have deeply inspired many of his people with his own enthusiasm. He, at least, saw clearly the pregnant consequences of the 19th April. I have found within a few days, among some family papers, his almanac of 1775, in a blank leaf of which he has written a narrative of the fight; and at the close of the month, he writes, "This month remarkable for the greatest events of the present age." To promote the same cause, he asked, and obtained of the town, leave to accept the commission of chaplain to the Northern army, at Ticonderoga, and died, after a few months, of the distemper that prevailed in the camp.

¶ In the whole course of the war the town did not depart from this pledge it had given. Its little population of 1300 souls behaved like a party to the contest. The number of its troops constantly in service is very great. Its pecuniary burdens are out of all proportion to its capital. The economy so rigid, which marked its earlier history, has all vanished. It spends profusely, affectionately, in the service. "Since," say the plaintive records, "General Washington, at Cambridge, is not able to give but 24s. per cord for wood, for the army; it is Voted, that this town encourage the inhabitants to supply the army, by paying two dollars per cord, over and above the General's price, to such as shall carry wood thither;" and 210 cords of wood were carried. A similar order is taken respecting hay. Whilst Boston was occupied by the British troops, Concord contributed to the relief of the inhabitants, £70, in money; 225 bushels of grain; and a quantity of meat and wood. When, presently, the poor of Boston were quartered by the Provincial Congress on the neighboring country, Concord received 82 persons to its hospitality. In the year 1775, it raised 100 minute-men, and 74 soldiers to serve at Cambridge. In March, 1776, 145 men were raised by this town to serve at Dorchester Heights. In June, the General Assembly of Massachusetts resolved to raise 5000 militia for six months, to reinforce the Continental army. "The numbers," say they, "are large, but this Court has the fullest assurance that their brethren, on this occasion, will not confer with flesh and blood, but will, without hesitation, and with the utmost alacrity and despatch, fill up the numbers proportioned to the several towns." On that occasion, Concord furnished 67 men, paying them itself, at an expense of £622. And so on, with every levy, to the end of the war. For these men it was continually providing shoes, stockings, shirts, coats, blankets and beef. The taxes, which, before the war, had not much exceeded £200 per annum, amounted, in the year 1782, to $9544, in silver.

¶ The great expense of the war was borne with cheerfulness, whilst the war lasted; but years passed, after the peace, before the debt was paid. As soon as danger and injury ceased, the people were left at leisure to consider their poverty and their debts. The Town Records show how slowly the inhabitants recovered from the strain of excessive exertion. Their instructions to their representatives are full of loud complaints of the disgraceful state of public credit, and the excess of public expenditure. They may be pardoned, under such distress, for the mistakes of an extreme frugality. They fell into a common error, not yet dismissed to the moon, that the remedy was, to forbid the great importation of foreign commodities, and to prescribe by law the prices of articles. The operation of a new government was dreaded, lest it should prove expensive, and the country towns thought it would be cheaper if it were removed from the capital. They were jealous lest the General Court should pay itself too liberally, and our fathers must be forgiven by their chari-

table posterity, if, in 1782, before choosing a representative, it was "Voted, that the person who should be chosen representative to the General Court should receive 6s. per day, whilst in actual service, an account of which time he should bring to the town, and if it should be that the General Court should resolve, that, their pay should be more than 6s., then the representative shall be hereby directed to pay the overplus into the town treasury." This was securing the prudence of the public servants.

¶ But whilst the town had its own full share of the public distress, it was very far from desiring relief at the cost of order and law. In 1786, when the general sufferings drove the people in parts of Worcester and Hampshire counties to insurrection, a large party of armed insurgents arrived in this town, on the 12th September, to hinder the sitting of the Court of Common Pleas. But they found no countenance here. The same people who had been active in a County Convention to consider grievances, condemned the rebellion, and joined the authorities in putting it down. In 1787, the admirable instructions given by the town to its representative are a proud monument of the good sense and good feeling that prevailed. The grievances ceased with the adoption of the Federal Constitution. The constitution of Massachusetts had been already accepted. It was put to the town of Concord, in October, 1776, by the Legislature, whether the existing house of representatives should enact a constitution for the State? The town answered No. The General Court notwithstanding, draughted a constitution, sent it here, and asked the town whether they would have it for the law of the State? The town answered No, by a unanimous vote. In 1780, a constitution of the State, proposed by the Convention chosen for that purpose, was accepted by the town with the reservation of some articles. And, in 1788, the town, by its delegate, accepted the new Constitution of the United States, and this event closed the whole series of important public events in which this town played a part.

¶ From that time to the present hour this town has made a slow but constant progress in population and wealth, and the arts of peace. It has suffered neither from war, nor pestilence, nor famine, nor flagrant crime. Its population, in the census of 1830, was 2020 souls. The public expenses, for the last year, amounted to $4290; for the present year, to $5040. If the community stints its expense in small matters, it spends freely on great duties. The town raises, this year, $1800 for its public schools; besides about $1200 which are paid, by subscription, for private schools. This year, it expends $800 for its poor; the last year it expended $900. Two religious societies, of differing creed, dwell together in good understanding, both promoting, we hope, the cause of righteousness and love. Concord has always been noted for its ministers. The living need no praise of mine. Yet it is among the sources of satisfaction and gratitude, this day, that the aged with whom is wisdom, our fathers' counsellor and friend, is spared to counsel and intercede for the sons.

¶ Such, fellow citizens, is an imperfect sketch of the history of Concord. I have been greatly indebted, in preparing this sketch, to the printed but unpublished History of this town, furnished me by the unhesitating kindness of its author, long a resident in this place. I hope that History will not long remain unknown. The author has done us and posterity a kindness, by the zeal and patience of his research, and has wisely enriched his pages with the resolutions, addresses and instructions to its agents, which from time to time, at critical periods, the town has voted. Meantime, I have read with care the Town Records themselves. They must ever be the fountains of all just information respecting your character and customs. They are the history of the town. They exhibit a pleasing picture of a community almost exclusively agricultural, where no man has much time for words, in his search after things; of a community of great simplicity of manners, and of a manifest love of justice. For the most part, the

town has deserved the name it wears. I find our annals marked with a uniform good sense. I find no ridiculous laws, no eavesdropping legislators, no hanging of witches, no ghosts, no whipping of Quakers, no unnatural crimes. The tone of the Records rises with the dignity of the event. These soiled and musty books are luminous and electric within. The old town clerks did not spell very correctly, but they contrive to make pretty intelligible the will of a free and just community. Frugal our fathers were,—very frugal,—though, for the most part, they deal generously by their minister, and provide well for the schools and the poor. If, at any time, in common with most of our towns, they have carried this economy to the verge of a vice, it is to be remembered that a town is, in many respects, a financial corporation. They economize, that they may sacrifice. They stint and higgle on the price of a pew, that they may send 200 soldiers to General Washington to keep Great Britain at bay. For splendor, there must somewhere be rigid economy. That the head of the house may go brave, the members must be plainly clad, and the town must save that the State may spend. Of late years, the growth of Concord has been slow. Without navigable waters, without mineral riches, without any considerable mill privileges, the natural increase of her population is drained by the constant emigration of the youth. Her sons have settled the region around us, and far from us. Their wagons have rattled down the remote western hills. And in every part of this country, and in many foreign parts, they plough the earth, they traverse the sea, they engage in trade and in all the professions.

¶ Fellow citizens; let not the solemn shadows of two hundred years, this day, fall over us in vain. I feel some unwillingness to quit the remembrance of the past. With all the hope of the new I feel that we are leaving the old. Every moment carries us farther from the two great epochs of public principle, the Planting, and the Revolution of the colony. Fortunate and favored this town has been, in having received so large an infusion of the spirit of both of those periods. Humble as is our village in the circle of later and prouder towns that whiten the land, it has been consecrated by the presence and activity of the purest men. Why need I remind you of our own Hosmers, Minotts, Cumings, Barretts, Beattons, the departed benefactors of the town? On the village green have been the steps of Winthrop and Dudley; of John Eliot, the Indian apostle, who had a courage that intimidated those savages whom his love could not melt; of Whitfield, whose silver voice melted his great congregation into tears; of Hancock, and his compatriots of the Provincial Congress; of Langdon, and the college over which he presided. But even more sacred influences than these have mingled here with the stream of human life. The merit of those who fill a space in the world's history, who are borne forward, as it were, by the weight of thousands whom they lead, sheds a perfume less sweet than do the sacrifices of private virtue. I have had much opportunity of access to anecdotes of families, and I believe this town to have been the dwelling-place, in all times since its planting, of pious and excellent persons, who walked meekly through the paths of common life, who served God, and loved man, and never let go the hope of immortality. The benediction of their prayers and of their principles lingers around us. The acknowledgment of the Supreme Being exalts the history of this people. It brought the fathers hither. In a war of principle, it delivered their sons. And so long as a spark of this faith survives among the children's children so long shall the name of Concord be honest and venerable.

EMANCIPATION IN THE BRITISH WEST INDIES

FRIENDS AND FELLOW CITIZENS: We are met to exchange congratulations on the anniversary of an event singular in the history of civilization; a day of reason; of the clear light; of that which makes us better than a flock of birds and beasts; a day which gave the immense fortification of a fact, of gross history, to ethical abstractions. It was the settlement, as far as a great Empire was concerned, of a question on which almost every leading citizen in it had taken care to record his vote; one which for many years absorbed the attention of the best and most eminent of mankind. I might well hesitate, coming from other studies, and without the smallest claim to be a special laborer in this work of humanity, to undertake to set this matter before you; which ought rather to be done by a strict coöperation of many well-advised persons; but I shall not apologize for my weakness. In this cause, no man's weakness is any prejudice: it has a thousand sons; if one man cannot speak, ten others can; and, whether by the wisdom of its friends, or by the folly of the adversaries; by speech and by silence; by doing and by omitting to do, it goes forward. Therefore I will speak, —or, not I, but the might of liberty in my weakness. The subject is said to have the property of making dull men eloquent.

¶ It has been in all men's experience a marked effect of the enterprise in behalf of the African, to generate an overbearing and defying spirit. The institution of slavery seems to its opponent to have but one side, and he feels that none but a stupid or a malignant person can hesitate on a view of the facts. Under such an impulse, I was about to say, If any cannot speak, or cannot hear the words of freedom, let him go hence,—I had almost said, Creep into your grave, the universe has no need of you! But I have thought better: let him not go. When we consider what remains to be done for this interest in this country, the dictates of humanity make us tender of such as are not yet persuaded. The hardest selfishness is to be borne with. Let us withhold every reproachful, and, if we can, every indignant remark. In this cause, we must renounce our temper, and the risings of pride. If there be any man who thinks the ruin of a race of men a small matter, compared with the last decoration and completions of his own comfort,—who would not so much as part with his ice-cream, to save them from rapine and manacles, I think I must not hesitate to satisfy that man that also his cream and vanilla are safer and cheaper by placing the negro nation on a fair footing than by robbing them. If the Virginian piques himself on the picturesque luxury of his vassalage, on the heavy Ethiopian manners of his house-servants, their silent obedience, their hue of bronze, their turbaned heads, and would not exchange them for the more intelligent but precarious hired service of whites, I shall not refuse to show him that when their free-papers are made out, it will still be their interest to remain on his estate, and that the oldest planters of Jamaica are convinced that it is cheaper to pay wages than to own the slave.

¶ The history of mankind interests us only as it exhibits a steady gain of truth and right, in the incessant conflict which it records between the material and the moral nature. From the earliest monuments it appears that one race was victim and served the other races. In the oldest temples of Egypt, negro captives are painted on the tombs of kings, in such attitudes as to show that they are on the point of being executed; and Herodotus, our oldest historian, relates that the Troglodytes hunted the Ethiopians in four-horse chariots. From the earliest time, the negro has been an article of luxury to the commercial nations. So has it been, down to the day that has just dawned on the world. Lan-

guage must be raked, the secrets of slaughter-houses and infamous holes that cannot front the day, must be ransacked, to tell what negro slavery has been. These men, our benefactors, as they are producers of corn and wine, of coffee, of tobacco, of cotton, of sugar, of rum and brandy; gentle and joyous themselves, and producers of comfort and luxury for the civilized world.—there seated in the finest climates of the globe, children of the sun.—I am heart-sick when I read how they came there, and how they are kept there. Their case was left out of the mind and out of the heart of their brothers. The prizes of society, the trumpet of fame, the privileges of learning, of culture, of religion, the decencies of joys of marriage, honor, obedience, personal authority and a perpetual melioration into a finer civility,—these were for all, but not for them. For the negro, was the slave-ship to begin with, in whose filthy hold he sat in irons, unable to lie down; bad food, and insufficiency of that; disfranchisement; no property in the rags that covered him; no marriage, no right in the poor black woman that cherished him in her bosom, no right to the children of his body; no security from the humors, none from the crimes, none from the appetites of his master; toil, famine, insult and flogging; and, when he sank in the furrow, no wind of good fame blew over him, no priest of salvation visited him with glad tidings: but he went down to death with dusky dreams of African shadow-catchers and Obeahs hunting him. Very sad was the negro tradition, that the Great Spirit, in the beginning offered the black man, whom he loved better than the buckra, or white, his choice of two boxes, a big and a little one. The black man was greedy, and chose the largest. "The buckra box was full up with pen, paper and whip, and the negro box with hoe and bill; and hoe and bill for negro to this day."

IF there be any man who thinks the ruin of a race of men a small matter—who would not so much as part with his ice-cream, to save them from rapine and manacles—I must satisfy that man that also his cream and vanilla are safer and cheaper by placing the negro nation on a fair footing than by robbing them.

¶ But the crude element of good in human affairs must work and ripen, spite of whips and plantation laws and West Indian interest. Conscience rolled on its pillow, and could not sleep. We sympathize very tenderly here with the poor aggrieved planter, of whom so many unpleasant things are said; but if we saw the whip applied to old men, to tender women; and, undeniably, though I shrink to say so, pregnant women set in the treadmill for refusing to work; when, not they, but the eternal law of animal nature refused to work;—if we saw men's backs flayed with cowhides, and "hot rum poured on, superinduced with brine or pickle, rubbed in with a cornhusk, in the scorching heat of the sun;"—if we saw the runaways hunted with bloodhounds into swamps and hills; and, in cases of passion, a planter throwing his negro into a copper of boiling cane-juice,—if we saw these things with eyes, we too should wince. They are not pleasant sights. The blood is moral: the blood is anti-slavery: it runs cold in the veins: the stomach rises with disgust, and curses slavery. Well, so it happened; a good man or woman, a country boy or girl,—it would so fall out,—once in a while saw these injuries and had the indiscretion to tell of them. The horrid story ran and flew; the winds blew it all over the world. They who heard it asked their rich and great friends if it was true, or only missionary lies. The richest and greatest, the prime minister of England, the king's privy

council were obliged to say that it was too true. It became plain to all men, the more this business was looked into, that the crimes and cruelties of the slave-traders and slave-owners could not be overstated. The more it was searched, the more shocking anecdotes came up,—things not to be spoken. Humane persons who were informed of the reports insisted on proving them. Granville Sharpe was accidentally made acquainted with the sufferings of a slave, whom a West Indian planter had brought with him to London and had beaten with a pistol on his head, so badly that his whole body became diseased, and the man useless to his master, who left him to go whither he pleased. The man applied to Mr. William Sharpe, a charitable surgeon, who attended the diseases of the poor. In process of time, he was healed. Granville Sharpe found him at his brother's and procured a place for him in an apothecary's shop. The master accidentally met his recovered slave, and instantly endeavored to get possession of him again. Sharpe protected the slave. In consulting with the lawyers, they told Sharpe the laws were against him. Sharpe would not believe it; no prescription on earth could ever render such iniquities legal. "But the decisions are against you, and Lord Mansfield, now Chief Justice of England, leans to the decisions. Sharpe instantly sat down and gave himself to the study of English law for more than two years, until he had proved that the opinions relied on, of Talbot and Yorke, were incompatible with the former English decisions and with the whole spirit of English law. He published his book in 1769, and he so filled the heads and hearts of his advocates that when he brought the case of George Somerset, another slave, before Lord Mansfield, the slavish decisions were set aside, and equity affirmed. There is a sparkle of God's righteousness in Lord Mansfield's judgment, which does the heart good. Very unwilling had that great lawyer been to reverse the late decisions; he suggested twice from the bench, in the course of the trial, how the question might be got rid of: but the hint was not taken; the case was adjourned again and again, and judgment delayed. At last judgment was demanded, and on the 22d June, 1772, Lord Mansfield is reported to have decided in these words:

¶ "Immemorial usage preserves the memory of *positive law*, long after all traces of the occasion, reason, authority and time of its introduction, are lost; and in a case so odious as the condition of slaves, must be taken strictly (tracing the subject to *natural principles*, the claim of slavery never can be supported). The power claimed by this return never was in use here. We cannot say the cause set forth by this return is allowed or approved of by the laws of this kingdom; and therefore the man must be discharged."

¶ This decision established the principle that the "air of England is too pure for any slave to breathe," but the wrongs in the islands were not thereby touched. Public attention, however, was drawn that way, and the methods of the stealing and the transportation from Africa became noised abroad. The Quakers got the story. In their plain meeting-houses and prim dwellings this dismal agitation got entrance. They were rich: they owned, for debt or by inheritance, island property; they were religious, tender-hearted men and women; and they had to hear the news and digest it as they could. Six Quakers met in London on the 6th of July, 1783,—William Dillwyn, Samuel Hoar, George Harrison, Thomas Knowles, John Lloyd, Joseph Woods, "to consider what step they should take for the relief and liberation of the negro slaves in the West Indies, and for the discouragement of the slave-trade on the coast of Africa." They made friends and raised money for the slave; they interested their Yearly Meeting; and all English and all American Quakers. John Woolman of New Jersey, whilst yet an apprentice, was uneasy in his mind when he was set to write a bill of sale of a negro, for his master. He gave his testimony against the traffic, in Maryland and Virginia. Thomas Clarkson was a youth at Cam-

bridge, England, when the subject given out for a Latin prize dissertation was, "Is it right to make slaves of others against their will?" He wrote an essay, and won the prize; but he wrote too well for his own peace; he began to ask himself if these things could be true; and if they were, he could no longer rest. He left Cambridge; he fell in with the six Quakers. They engaged him to act for them. He himself interested Mr. Wilberforce in the matter. The ship-masters in that trade were the greatest miscreants, and guilty of every barbarity to their own crews. Clarkson went to Bristol, made himself acquainted with the interior of the slave-ships and the details of the trade. The facts confirmed his sentiment, "that Providence had never made that to be wise which was immoral, and that the slave-trade was as impolitic as it was unjust;" that it was found peculiarly fatal to those employed in it. More seamen died in that trade in one year than in the whole remaining trade of the country in two. Mr. Pitt and Mr. Fox were drawn into the generous enterprise. In 1788, the House of Commons voted Parliamentary inquiry. In 1791, a bill to abolish the trade was brought in by Wilberforce, and supported by him and by Fox and Burke and Pitt, with the utmost ability and faithfulness; resisted by the planters and the whole West Indian interest, and lost. During the next sixteen years, ten times, year after year, the attempt was renewed by Mr. Wilberforce, and ten times defeated by the planters. The king, and all the royal family but one, were against it. These debates are instructive, as they show on what grounds the trade was assailed and defended. Everything generous, wise and sprightly is sure to come to the attack. On the other part are found cold prudence, barefaced selfishness and silent votes. But the nation was aroused to enthusiasm. Every horrid fact became known. In 1791, three hundred thousand persons in Britain pledged themselves to abstain from all articles of island produce. The planters were obliged to give way; and in 1807, on the 25th March, the bill passed, and the slave-trade was abolished.

¶ The assailants of slavery had early agreed to limit their political action on this subject to the abolition of the trade, but Granville Sharpe, as a matter of conscience, whilst he acted as chairman of the London Committee, felt constrained to record his protest against the limitation, declaring that slavery was as much a crime against the Divine law as the slave-trade. The trade, under false flags, went on as before. In 1821, according to official documents presented to the American government by the Colonization Society, 200,000 slaves were deported from Africa. Nearly 30,000 were landed in the port of Havana alone. In consequence of the dangers of the trade growing out of the act of abolition, ships were built sharp for swiftness, and with a frightful disregard of the comfort of the victims they were destined to transport. They carried five, six, even seven hundred stowed in a ship built so narrow as to be unsafe, being made just broad enough on the beam to keep the sea. In attempting to make its escape from the pursuit of a man-of-war, one ship flung five hundred slaves alive into the sea. These facts went into Parliament. In the islands was an ominous state of cruel and licentious society; every house had a dungeon attached to it; every slave was worked by the whip. There is no end to the tragic anecdotes in the municipal records of the colonies. The boy was set to strip and flog his own mother to blood, for a small offense. Looking in the face of his master by the negro was held to be violence by the island courts. He was worked sixteen hours, and his ration by law, in some islands, was a pint of flour and one salt herring a day. He suffered insult, stripes, mutilation at the humor of the master: iron collars were riveted on their necks with iron prongs ten inches long; capsicum pepper was rubbed in the eyes of the females; and they were done to death with the most shocking levity between the master and manager, without fine or inquiry. And when, at last, some Quakers, Moravians, and Wesleyan and Baptist missionaries, following in the

steps of Carey and Ward in the East Indies, had been moved to come and cheer the poor victim with the hope of some reparation, in a future world, of the wrongs he suffered in this, these missionaries were persecuted by the planters, their lives threatened, their chapels burned, and the negroes furiously forbidden to go near them. These outrages rekindled the flame of British indignation. Petitions poured into Parliament: a million persons signed their names to these; and in 1833, on the 14th May, Lord Stanley, Minister of the Colonies, introduced into the House of Commons his bill for the Emancipation.

¶ The scheme of the Minister, with such modification as it received in the legislature, proposed gradual emancipation; that on 1st August, 1834, all persons now slaves should be entitled to be registered as apprenticed laborers, and to acquire thereby all the rights and privileges of freemen, subject to the restriction of laboring under certain conditions. These conditions were, that the prædials should owe three fourths of the profits of their labor to their masters for six years, and the non-prædials for four years. The other fourth of the apprentice's time was to be his own, which he might sell to his master, or to other persons; and at the end of the term of years fixed, he should be free.

¶ With these provisions and conditions, the bill proceeds, in the twelfth section, in the following terms: "Be it enacted, that all and every person who, on the first August, 1834, shall be holden in slavery within any such British colony as aforesaid, shall upon and from and after the said first August, become and be to all intents and purposes free, and discharged of and from all manner of slavery, and shall be absolutely and forever manumitted; and that the children thereafter born to any such persons, and the offspring of such children, shall, in like manner, be free, from their birth; and that from and after the first August, 1834, slavery shall be and is hereby utterly and forever abolished and declared unlawful throughout the British colonies, plantations, and possessions abroad."

¶ The Ministers, having estimated the slave products of the colonies in annual exports of sugar, rum and coffee, at £1,500,000 per annum, estimated the total value of the slave property at 30,000,000 pounds sterling, and proposed to give the planters, as a compensation for so much of the slaves' time as the act took from them, 20,000,000 pounds sterling, to be divided into nineteen shares for the nineteen colonies, and to be distributed to the owners of slaves by commissioners, whose appointment and duties were regulated by the Act. After much debate, the bill passed by large majorities. The apprenticeship system is understood to have proceeded from Lord Brougham, and was by him urged on his colleagues, who, it is said, were inclined to the policy of immediate emancipation.

¶ The colonial legislatures received the act of Parliament with various degrees of displeasure, and, of course, every provision of the bill was criticised with severity. The new relation between the master and the apprentice, it was feared, would be mischievous; for the bill required the appointment of magistrates who should hear every complaint of the apprentice and see that justice was done him. It was feared that the interest of the master and servant would now produce perpetual discord between them. In the island of Antigua, containing 37,000 people, 30,000 being negroes, these objections had such weight that the legislature rejected the apprenticeship system, and adopted absolute emancipation. In the other islands the system of the Ministry was accepted.

¶ The reception of it by the negro population was equal in nobleness to the deed. The negroes were called together by the missionaries and by the planters, and the news explained to them. On the night of the 31st July, they met everywhere at their churches and chapels, and at midnight, when the clock struck twelve, on their knees, the silent, weeping assembly became men; they rose and embraced each other; they cried, they sung, they prayed, they were wild with

joy, but there was no riot, no feasting. I have never read anything in history more touching than the moderation of the negroes. Some American captains left the shore and put to sea, anticipating insurrection and general murder. With far different thoughts, the negroes spent the hour in their huts and chapels. I will not repeat to you the well-known paragraph, in which Messrs. Thome and Kimball, the commissioners sent out in the year 1837 by the American Anti-Slavery Society, describe the occurrences of that night in the island of Antigua. It has been quoted in every newspaper, and Dr. Channing has given it additional fame. But I must be indulged in quoting a few sentences from the pages that follow it, narrating the behavior of the emancipated people on the next day.

¶ "The first of August came on Friday, and a release was proclaimed from all work until the next Monday. The day was chiefly spent by the great mass of the negroes in the churches and chapels. The clergy and missionaries throughout the island were actively engaged, seizing the opportunity to enlighten the people on all the duties and responsibilities of their new relation, and urging them to the attainment of that higher liberty with which Christ maketh his children free. In every quarter, we were assured, the day was like a Sabbath. Work had ceased. The hum of business was still: tranquillity pervaded the towns and country. The planters informed us that they went to the chapels where their own people were assembled, greeted them, shook hands with them, and exchanged the most hearty good wishes. At Grace Hill, there were at least a thousand persons around the Moravian Chapel who could not get in. For once the house of God suffered violence, and the violent took it by force. At Grace Bay, the people, all dressed in white, formed a procession, and walked arm in arm into the chapel. We were told that the dress of the negroes on that occasion was uncommonly simple and modest. There was not the least disposition to gayety. Throughout the island, there was not a single dance known of, either day or night, not so much as a fiddle played."

¶ On the next Monday morning, with very few exceptions, every negro on every plantation was in the field at his work. In some places, they waited to see their master, to know what bargain he would make; but for the most part, throughout the islands, nothing painful occurred. In June, 1835, the Ministers, Lord Aberdeen and Sir George Grey, declared to the Parliament that the system worked well; that now for ten months, from 1st August, 1834, no injury or violence had been offered to any white, and only one black had been hurt in 800,000 negroes: and, contrary to many sinister predictions, that the new crop of island produce would not fall short of that of the last year.

¶ But the habit of oppression was not destroyed by a law and a day of jubilee. It soon appeared in all the islands that the planters were disposed to use their old privileges, and overwork the apprentices; to take from them, under various pretenses, their fourth part of their time; and to exert the same licentious despotism as before. The negroes complained to the magistrates and to the governor. In the island of Jamaica, this ill blood continually grew worse. The governors, Lord Belmore, the Earl of Sligo, and afterwards Sir Lionel Smith (a governor of their own class, who had been sent out to gratify the planters), threw themselves on the side of the oppressed, and were at constant quarrel with the angry and bilious island legislature. Nothing can exceed the ill humor and sulkiness of the addresses of this assembly.

¶ I may here express a general remark, which the history of slavery seems to justify, that it is not founded solely on the avarice of the planter. We sometimes say, the planter does not want slaves, he only wants the immunities and the luxuries which the slaves yield him; give him money, give him a machine that will yield him as much money as the slaves, and he will thankfully let them go. He has no love of slavery, he wants

luxury, and he will pay even this price of crime and danger for it. But I think experience does not warrant this favorable distinction, but shows the existence, beside the covetousness, of a bitterer element, the love of power, the voluptuousness of holding a human being in his absolute control. We sometimes observe that spoiled children contract a habit of annoying quite wantonly those who have charge of them, and seem to measure their own sense of well-being, not by what they do, but by the degree of reaction they can cause. It is vain to get rid of them by not minding them: if purring and humming is not noticed, they squeal and screech; then if you chide and console them, they find the experiment succeeds, and they begin again. The child will sit in your arms contented, provided you do nothing. If you take a book and read, he commences hostile operations. The planter is the spoiled child of his unnatural habits, and has contracted in his indolent and luxurious climate the need of excitement by irritating and tormenting his slave.

¶ Sir Lionel Smith defended the poor negro girls, prey to the licentiousness of the planters; they shall not be whipped with tamarind rods if they do not comply with their master's will; he defended the negro women; they should not be made to dig the cane-holes (which is the very hardest of the field work); he defended the Baptist preachers and the stipendiary magistrates, who are the negroes' friends, from the power of the planter. The power of the planters, however, to oppress, was greater than the power of the apprentice and of his guardians to withstand. Lord Brougham and Mr. Buxton declared that the planter had not fulfilled his part in the contract, whilst the apprentices had fulfilled theirs; and demanded that the emancipation should be hastened, and the apprenticeship abolished. Parliament was compelled to pass additional laws for the defence and security of the negro, and in ill humor at these acts, the great island of Jamaica, with a population of half a million, and 300,000 negroes, early in 1838, resolved to throw up the two remaining years of apprenticeship, and to emancipate absolutely on the 1st August, 1838. In British Guiana, in Dominica, the same resolution had been earlier taken with more good will; and the other islands fell into the measure; so that on the 1st August, 1838, the shackles dropped from every British slave. The accounts which we have from all parties, both from the planters (and those too who were originally most opposed to the measure), and from the new freemen, are of the most satisfactory kind. The manner in which the new festival was celebrated, brings tears to the eyes. The First of August, 1838, was observed in Jamaica as a day of thanksgiving and prayer. Sir Lionel Smith, the governor, writes to the British Ministry, "It is impossible for me to do justice to the good order, decorum and gratitude which the whole laboring population manifested on that happy occasion. Though joy beamed on every countenance, it was throughout tempered with solemn thankfulness to God, and the churches and chapels were everywhere filled with these happy people in humble offering of praise."

¶ The Queen, in her speech to the Lords and Commons, praised the conduct of the emancipated population: and in 1840 Sir Charles Metcalfe, the new governor of Jamaica, in his address to the Assembly expressed himself to that late exasperated body in these terms: "All those who are acquainted with the state of the island know that our emancipated population are as free, as independent in their conduct, as well conditioned, as much in the enjoyment of abundance, and as strongly sensible of the blessings of liberty, as any that we know of in any country. All disqualifications and distinctions of color have ceased; men of all colors have equal rights in law, and an equal footing in society, and every man's position is settled by the same circumstances which regulate that point in other free countries, where no difference of color exists. It may be asserted, without fear of de-

nial, that the former slaves of Jamaica are now as secure in all social rights, as freeborn Britons." He further describes the erection of numerous churches, chapels and schools which the new population required, and adds that more are still demanded. The legislature, in their reply, echo the governor's statement, and say, "The peaceful demeanor of the emancipated population redounds to their own credit, and affords a proof of their continued comfort and prosperity."

¶ I said, this event is signal in the history of civilization. There are many styles of civilization, and not one only. Ours is full of barbarities. There are many faculties in man, each of which takes its turn of activity, and that faculty which is paramount in any period and exerts itself through the strongest nation, determines the civility of that age: and each age thinks its own the perfection of reason. Our culture is very cheap and intelligible. Unroof any house, and you shall find it. The well-being consists in having a sufficiency of coffee and toast, with a daily newspaper; a well glazed parlor, with marbles, mirrors and centre-table; and the excitement of a few parties and a few rides in a year. Such as one house, such are all. The owner of a New York manor imitates the mansion and equipage of the London nobleman; the Boston merchant rivals his brother of New York; and the villages copy Boston. There have been nations elevated by great sentiments. Such was the civility of Sparta and the Dorian race, whilst it was defective in some of the chief elements of ours. That of Athens, again, lay in an intellect dedicated to beauty. That of Asia Minor in poetry, music and arts; that of Palestine in piety; that of Rome in military arts and virtues, exalted by a prodigious magnanimity; that of China and Japan in the last exaggeration of decorum and etiquette. Our civility, England determines the style of, inasmuch as England is the strongest of the family of existing nations, and as we are the expansion of that people. It is that of a trading nation; it is a shopkeeping civility. The English lord is a retired shopkeeper, and has the prejudices and timidities of that profession. And we are shopkeepers, and have acquired the vices and virtues that belong to trade. We peddle, we truck, we sail, we row, we ride in cars, we creep in teams, we go in canals,—to market, and for the sale of goods. The national aim and employment streams into our ways of thinking, our laws, our habits and our manners. The customer is the immediate jewel of our souls. Him we flatter, him we feast, compliment, vote for, and will not contradict. It was, or it seemed the dictate of trade, to keep the negro down. We had found a race who were less warlike, and less energetic shopkeepers than we; who had very little skill in trade. We found it very convenient to keep them at work, since, by the aid of a little whipping, we could get their work for nothing but their board and the cost of whips. What if it cost a few unpleasant scenes on the coast of Africa? That was a great way off; and the scenes could be endured by some sturdy, unscrupulous fellows, who could go, for high wages, and bring us the men, and need not trouble our ears with the disagreeable particulars. If any mention was made of homicide, madness, adultery, and intolerable tortures, we would let the church-bells ring louder, the church-organ swell its peal and drown the hideous sound. The sugar they raised was excellent: nobody tasted blood in it. The coffee was fragrant; the tobacco was incense; the brandy made nations happy; the cotton clothed the world. What! all raised by these men, and no wages? Excellent! What a convenience! They seemed created by Providence to bear the heat and the whipping, and make these fine articles.

¶ But unhappily, most unhappily, gentlemen, man is born with intellect, as well as with a love of sugar; and with a sense of justice, as well as a taste for strong drink. These ripened, as well as those. You could not educate him, you could not get any poetry, any wisdom, any beauty in woman, any strong and commanding character in man, but these

absurdities would still come flashing out,—these absurdities of a demand for justice, a generosity for the weak and oppressed. Unhappily, too, for the planter, the laws of nature are in harmony with each other: that which the head and the heart demand is found to be, in the long run, for what the grossest calculator calls his advantage. The moral sense is always supported by the permanent interest of the parties. Else, I know not how, in our world, any good would ever get done. It was shown to the planters that they, as well as the negroes, were slaves; that though they paid no wages, they got very poor work; that their estates were ruining them, under the finest climate; and that they needed the severest monopoly laws at home to keep them from bankruptcy. The oppression of the slave recoiled on them. They were full of vices; their children were lumps of pride, sloth, sensuality and rottenness. The position of woman was nearly as bad as it could be; and, like other robbers, they could not sleep in security. Many planters have said, since the emancipation, that, before that day, they were the greatest slaves on the estates. Slavery is no scholar, no improver; it does not love the whistle of the railroad; it does not love the newspaper, the mail-bag, a college, a book or a preacher who has the absurd whim of saying what he thinks; it does not increase the white population; it does not improve the soil; everything goes to decay. For these reasons the islands proved bad customers to England. It was very easy for manufacturers less shrewd than those of Birmingham and Manchester to see that if the state of things in the islands was altered, if the slaves had wages, the slaves would be clothed, would build houses, would fill them with tools, with pottery, with crockery, with hardware; and negro women love fine clothes as well as white women. In every naked negro of those thousands, they saw a future customer. Meantime, they saw further that the slave-trade, by keeping in barbarism the whole coast of eastern Africa, deprives them of countries and nations of customers, if once freedom and civility and European manners could get a foothold there. But the trade could not be abolished whilst this hungry West Indian market, with an appetite like the grave, cried, "More, more, bring me a hundred a day;" they could not expect any mitigation in the madness of the poor African war-chiefs. These considerations opened the eyes of the dullest in Britain. More than this, the West Indian estate was owned or mortgaged in England, and the owner and the mortgagee had very plain intimations that the feeling of English liberty was gaining every hour new mass and velocity, and the hostility to such as resisted it would be fatal. The House of Commons would destroy the protection of island produce, and interfere in English politics in the island legislation: so they hastened to make the best of their position, and accepted the bill.

¶ These considerations, I doubt not, had their weight; the interest of trade, the interest of the revenue, and, moreover, the good fame of the action. It was inevitable that men should feel these motives. But they do not appear to have had an excessive or unreasonable weight. On reviewing this history, I think the whole transaction reflects infinite honor on the people and parliament of England. It was a stately spectacle, to see the cause of human rights argued with so much patience and generosity and with such a mass of evidence before that powerful people. It is a creditable incident in the history that when, in 1789, the first privy council report of evidence on the trade (a bulky folio embodying all the facts which the London Committee had been engaged for years in collecting, and all the examinations before the council) was presented to the House of Commons, a late day being named for the discussion, in order to give members time,—Mr. Wilberforce, Mr. Pitt, the Prime Minister, and other gentlemen, took advantage of the postponement to retire into the country to read the report. For months and years the bill was debated, with some consciousness of the extent of its relations, by the first citizens of England, the foremost

men of the earth; every argument was weighed, every particle of evidence was sifted and laid in the scale; and, at last, the right triumphed, the poor man was vindicated, and the oppressor was flung out. I know that England has the advantage of trying the question at a wide distance from the spot where the nuisance exists; the planters are not, excepting in rare examples, members of the legislature. The extent of the empire, and the magnitude and number of other questions crowding into court, keep this one in balance, and prevent it from obtaining that ascendency, and being urged with that intemperance which a question of property tends to acquire. There are causes in the composition of the British legislature, and the relation of its leaders to the country and to Europe, which exclude much that is pitiful and injurious in other legislative assemblies. From these reasons, the question was discussed with a rare independence and magnanimity. It was not narrowed down to a paltry electioneering trap; and, I must say, a delight in justice, an honest tenderness for the poor negro, for man suffering these wrongs, combined with the national pride, which refused to give the support of English soil or the protection of the English flag to these disgusting violations of nature.

¶ Forgive me, fellow citizens, if I own to you, that in the last few days that my attention has been occupied with this history, I have not been able to read a page of it without the most painful comparisons. Whilst I have read of England, I have thought of New England. Whilst I have meditated in my solitary walks on the magnanimity of the English Bench and Senate, reaching out the benefit of the law to the most helpless citizen in her world-wide realm, I have found myself oppressed by other thoughts. As I have walked in the pastures and along the edge of woods, I could not keep my imagination on those agreeable figures, for other images that intruded on me. I could not see the great vision of the patriots and senators who have adopted the slave's cause:—they turned their backs on me. No: I see other pictures,—of mean men; I see very poor, very ill-clothed, very ignorant men, not surrounded by happy friends,—to be plain,—poor black men of obscure employment as mariners, cooks or stewards, in ships, yet citizens of this our Commonwealth of Massachusetts,—freeborn as we,—whom the slave-laws of the States of South Carolina, Georgia and Louisiana have arrested in the vessels in which they visited those ports, and shut up in jails so long as the vessel remained in port, with the stringent addition, that if the shipmaster fails to pay the costs of this official arrest and the board in jail, these citizens are to be sold for slaves, to pay that expense. This man, these men, I see, and no law to save them. Fellow citizens, this crime will not be hushed up any longer. I have learned that a citizen of Nantucket, walking in New Orleans, found a freeborn citizen of Nantucket, a man, too, of great personal worth, and, as it happened, very dear to him, as having saved his own life, working chained in the streets of that city, kidnapped by such a process as this. In the sleep of the laws, the private interference of two excellent citizens of Boston has, I have ascertained, rescued several natives of this State from these Southern prisons. Gentlemen, I thought the deck of a Massachusetts ship was as much the territory of Massachusetts as the floor on which we stand. It should be as sacred as the temple of God. The poorest fishing-smack that floats under the shadow of an iceberg in the Northern seas, or hunts whale in the Southern ocean, should be encompassed by her laws with comfort and protection, as much as within the arms of Cape Ann or Cape Cod. And this kidnapping is suffered within our own land and federation, whilst the fourth article of the Constitution of the United States ordains in terms, that "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States." If such a damnable outrage can be committed on the person of a citizen with impunity, let the Governor break the broad seal of the State; he

bears the sword in vain. The Governor of Massachusetts is a trifler; the State-House in Boston is a playhouse; the General Court is a dishonored body, if they make laws which they cannot execute. The great-hearted Puritans have left no posterity. The rich men may walk in State Street, but they walk without honor; and the farmers may brag their democracy in the country, but they are disgraced men. If the State has no power to defend its own people in its own shipping, because it has delegated that power to the Federal Government, has it no representation in the Federal Government? Are those men dumb? I am no lawyer, and cannot indicate the forms applicable to the case, but here is something which transcends all forms. Let the senators and representatives of the State, containing a population of a million freemen, go in a body before the Congress and say that they have a demand to make on them, so imperative that all functions of government must stop until it is satisfied. If ordinary legislation cannot reach it, then extraordinary must be applied. The Congress should instruct the President to send to those ports of Charleston, Savannah and New Orleans such orders and such force as should release, forthwith, all such citizens of Massachusetts as were holden in prison without the allegation of any crime, and should set on foot the strictest inquisition to discover where such persons, brought into slavery by these local laws at any time heretofore, may now be. That first; and then, let order be taken to indemnify all such as have been incarcerated. As for dangers to the Union, from such demands!—the Union already is at an end when the first citizen of Massachusetts is thus outraged. Is it an union and covenant in which the State of Massachusetts agrees to be imprisoned, and the State of Carolina to imprison? Gentlemen, I am loath to say harsh things, and perhaps I know too little of politics for the smallest weight to attach to any censure of mine,—but I am at a loss how to characterize the tameness and silence of the two senators and the ten representatives of the State at Washington. To what purpose have we clothed each of those representatives with the power of seventy thousand persons, and each senator with near half a million, if they are to sit dumb at their desks and see their constituents captured and sold;—perhaps to gentlemen sitting by them in the hall? There is a scandalous rumor that has been swelling louder of late years,—perhaps wholly false,—that members are bullied into silence by Southern gentlemen. It is so easy to omit to speak, or even to be absent when delicate things are to be handled. I may as well say, what all men feel, that whilst our very amiable and very innocent representatives and senators at Washington are accomplished lawyers and merchants, and very eloquent at dinners and at caucuses, there is a disastrous want of *men* from New England. I would gladly make exception, and you will not suffer me to forget one eloquent old man, in whose veins the blood of Massachusetts rolls, and who singly has defended the freedom of speech, and the rights of the free, against the usurpation of the slaveholder. But the reader of Congressional debates, in New England, is perplexed to see with what admirable sweetness and patience the majority of the free States are schooled and ridden by the minority of slave-holders. What if we should send thither representatives who were a particle less amiable and less innocent? I entreat you, sirs, let not this stain attach, let not this misery accumulate any longer. If the managers of our political parties are too prudent and too cold;—if, most unhappily, the ambitious class of young men and political men have found out that these neglected victims are poor and without weight; that they have no graceful hospitalities to offer; no valuable business to throw into any man's hands, no strong vote to cast at the elections; and therefore may with impunity be left in their chains or to the chance of chains,—then let the citizens in their primary capacity take up their cause on this very ground, and say to the government of the State, and of the Union, that government exists to

defend the weak and the poor and the injured party; the rich and the strong can better take care of themselves. And as an omen and assurance of success, I point you to the bright example which England set you, on this day, ten years ago.

¶ There are other comparisons and other imperative duties which come sadly to mind,—but I do not wish to darken the hours of this day by crimination; I turn gladly to the rightful theme, to the bright aspects of the occasion.

¶ This event was a moral revolution. The history of it is before you. Here was no prodigy, no fabulous hero, no Trojan horse, no bloody war, but all was achieved by plain means of plain men, working not under a leader, but under a sentiment. Other revolutions have been the insurrection of the oppressed; this was the repentance of the tyrant. It was the masters revolting from their mastery. The slave-holder said, "I will not hold slaves." The end was noble and the means were pure. Hence the elevation and pathos of this chapter of history. The lives of the advocates are pages of greatness, and the connection of the eminent senators with this question constitutes the immortalizing moments of those men's lives. The bare enunciation of the theses at which the lawyers and legislators arrived, gives a glow to the heart of the reader. Lord Chancellor Northington is the author of the famous sentence, "As soon as any man puts his foot on English ground, he becomes free." "I was a slave," said the counsel of Somerset, speaking for his client, "for I was in America: I am now in a country where the common rights of mankind are known and regarded." Granville Sharpe filled the ears of the judges with the sound principles that had from time to time been affirmed by the legal authorities: "Derived power cannot be superior to the power from which it is derived:" "The reasonableness of the law is the soul of the law:" "It is better to suffer every evil, than to consent to any." Out it would come, the God's truth, out it came, like a bolt from a cloud, for all the mumbling of the lawyers. One feels very sensibly in all this history that a great heart and soul are behind there, superior to any man, and making use of each, in turn, and infinitely attractive to every person according to the degree of reason in his own mind, so that this cause has had the power to draw to it every particle of talent and of worth in England, from the beginning. All the great geniuses of the Britsh senate, Fox, Pitt, Burke, Grenville, Sheridan, Grey, Canning, ranged themselves on its side; the poet Cowper wrote for it: Franklin, Jefferson, Washington, in this country, all recorded their votes. All men remembered the subtlety and the fire of indignation which the "Edinburgh Review" contributed to the cause; and every liberal mind, poet, preacher, moralist, statesman, has had the fortune to appear somewhere for this cause. On the other part, appeared the reign of pounds and shillings, and all manner of rage and stupidity; a resistance which drew from Mr. Huddlestone in Parliament the observation, "That a curse attended this trade even in the mode of defending it. By a certain fatality, none but the vilest arguments were brought forward, which corrupted the very persons who used them. Every one of these was built on the narrow ground of interest, of pecuniary profit, of sordid gain, in opposition to every motive that had reference to humanity, justice, and religion, or to that great principle which comprehended them all." This moral force perpetually reinforces and dignifies the friends of this cause. It gave that tenacity to their point which has insured ultimate triumph; and it gave that superiority in reason, in imagery, in eloquence, which makes in all countries anti-slavery meetings so attractive to the people, and has made it a proverb in Massachusetts, that "eloquence is dog-cheap at the anti-slavery chapel."

¶ I will say further that we are indebted mainly to this movement and to the continuers of it, for the popular discussion of every point of practical ethics, and a reference of every question to the

absolute standard. It is notorious that the political, religious and social schemes, with which the minds of men are now most occupied, have been matured, or at least broached, in the free and daring discussions of these assemblies. Men have become aware, through the emancipation and kindred events, of the presence of powers which, in their days of darkness, they had overlooked. Virtuous men will not again rely on political agents. They have found out the deleterious effect of political association. Up to this day we have allowed to statesmen a paramount social standing, and we bow low to them as to the great. We cannot extend this deference to them any longer. The secret cannot be kept, that the seats of power are filled by underlings, ignorant, timid and selfish to a degree to destroy all claim, excepting that on compassion, to the society of the just and generous. What happened notoriously to an American ambassador in England, that he found himself compelled to palter and to disguise the fact that he was a slave-breeder, happens to men of state. Their vocation is a presumption against them among well-meaning people. The superstition respecting power and office is going to the ground. The stream of human affairs flows its own way, and is very little affected by the activity of legislators. What great masses of men wish done, will be done; and they do not wish it for a freak, but because it is their state and natural end. There are now other energies than force, other than political, which no man in future can allow himself to disregard. There is direct conversation and influence. A man is to make himself felt by his proper force. The tendency of things runs steadily to this point, namely, to put every man on his merits, and to give him so much power as he naturally exerts,—no more, no less. Of course, the timid and base persons, all who are conscious of no worth in themselves, and who owe all their place to the opportunities which the older order of things allowed them, to deceive and defraud men, shudder at the change, and would fain silence every honest voice, and lock up every house where liberty and innovation can be pleaded for. They would raise mobs, for fear is very cruel. But the strong and healthy yeomen and husbands of the land, the self-sustaining class of inventive and industrious men, fear no competition or superiority. Come what will, their faculty cannot be spared.

¶ The First of August marks the entrance of a new element into modern politics, namely, the civilization of the negro. A man is added to the human family. Not the least affecting part of this history of abolition is the annihilation of the old indecent nonsense about the nature of the negro. In the case of the ship Zong, in 1781, whose master had thrown one hundred and thirty-two slaves alive into the sea, to cheat the underwriters, the first jury gave a verdict in favor of the master and owners: they had a right to do what they had done. Lord Mansfield is reported to have said on the bench, "The matter left to the jury is,—Was it from necessity? For they had no doubt—though it shocks one very much—that the case of slaves was the same as if horses had been thrown overboard. It is a very shocking case." But a more enlightened and humane opinion began to prevail. Mr. Clarkson, early in his career, made a collection of African productions and manufactures, as specimens of the arts and culture of the negro; comprising cloths and loom, weapons, polished stones and woods, leather, glass, dyes, ornaments, soap, pipe-bowls and trinkets. These he showed to Mr. Pitt, who saw and handled them with extreme interest. "On sight of these," says Clarkson, "many sublime thoughts seemed to rush at once into his mind, some of which he expressed;" and hence appeared to arise a project which was always dear to him, of the civilization of Africa,—a dream which forever elevates his fame. In 1791, Mr. Wilberforce announced to the House of Commons, "We have already gained one victory: we have obtained for these poor creatures the recognition of their human nature, which for a time was most shamefully denied

them." It was the sarcasm of Montesquieu, "it would not do to suppose that negroes were men, lest it should turn out that whites were not;" for the white has, for ages, done what he could to keep the negro in that hoggish state. His laws have been furies. It now appears that the negro race is, more than any other, susceptible of rapid civilization. The emancipation is observed, in the islands, to have wrought for the negro a benefit as sudden as when a thermometer is brought out of the shade into the sun. It has given him eyes and ears. If, before, he was taxed with such stupidity, or such defective vision, that he could not set a table square to the walls of an apartment, he is now the principal if not the only mechanic in the West Indies; and is, besides, an architect, a physician, a lawyer, a magistrate, an editor, and a valued and increasing political power. The recent testimonies of Sturge, of Thome and Kimball, of Gurney, of Philippo, are very explicit on this point, the capacity and the success of the colored and the black population in employments of skill, of profit and of trust; and best of all is the testimony to their moderation. They receive hints and advances from the whites that they will be gladly received as subscribers to the Exchange, as members of this or that committee of trust. They hold back, and say to each other that "social position is not to be gained by pushing."

¶ I have said that this event interests us because it came mainly from the concession of the whites; I add, that in part it is the earning of the blacks. They won the pity and respect which they have received, by their powers and native endowments. I think this a circumstance of the highest import. Their whole future is in it. Our planet, before the age of written history, had its races of savages, like the generations of sour paste, or the animalcules that wiggle and bite in a drop of putrid water. Who cares for these or for their wars? We do not wish a world of bugs or of birds; neither afterward of Scythians, Caraibs or Feejees. The grand style of Nature, her great periods, is all we observe in them. Who cares for oppressing whites, or oppressed blacks, twenty centuries ago, more than for bad dreams? Eaters and food are in the harmony of Nature; and there too is the germ forever protected, unfolding gigantic leaf after leaf, a newer flower, a richer fruit, in every period, yet its next product is never to be guessed. It will only save what is worth saving; and it saves not by compassion, but by power. It appoints no police to guard the lion but his teeth and claws; no fort or city for the bird but his wings; no rescue for flies and mites but their spawning numbers, which no ravages can overcome. It deals with men after the same manner. If they are rude and foolish, down they must go. When at last in a race a new principle appears, an idea,—*that* conserves it; ideas only save races. If the black man is feeble and not important to the existing races, not on a parity with the best race, the black man must serve, and be exterminated. But if the black man carries in his bosom an indispensable element of a new and coming civilization; for the sake of that element, no wrong nor strength nor circumstance can hurt him: he will survive and play his part. So now, the arrival in the world of such men as Toussaint, and the Haytian heroes, or of the leaders of their race in Barbadoes and Jamaica, outweighs in good omen all the English and American humanity. The anti-slavery of the whole world is dust in the balance before this,—is a poor squeamishness and nervousness: the might and the right are here: here is the anti-slave: here is man: and if you have man, black or white is an insignificance. The intellect,—that is miraculous! Who has it, has the talisman: his skin and bones, though they were of the color of night, are transparent, and the everlasting stars shine through, with attractive beams. But a compassion for that which is not and cannot be useful or lovely, is degrading and futile. All the songs and newspapers and money subscriptions and vituperation of such as do not think with us, will avail nothing against a fact. I say to you, you must save yourself, black or white, man

or woman; other help is none. I esteem the occasion of this jubilee to be the proud discovery that the black race can contend with the white: that in the great anthem which we call history, a piece of many parts and vast compass, after playing a long time a very low and subdued accompaniment, they perceive the time arrived when they can strike in with effect and take a master's part in the music. The civility of the world has reached that pitch that their more moral genius is becoming indispensable, and the quality of this race is to be honored for itself. For this, they have been preserved in sandy deserts, in rice-swamps, in kitchens and shoe-shops, so long: now let them emerge, clothed and in their own form.

¶ There remains the very elevated consideration which the subject opens, but which belongs to more abstract views than we are now taking, this, namely, that the civility of no race can be perfect whilst another race is degraded. It is a doctrine alike of the oldest and of the newest philosophy, that man is one, and that you cannot injure any member, without a sympathetic injury to all the members. America is not civil, whilst Africa is barbarous.

¶ These considerations seem to leave no choice for the action of the intellect and the conscience of the country. There have been moments in this, as well as in every piece of moral history, when there seemed room for the infusions of a skeptical philosophy; when it seemed doubtful whether brute force would not triumph in the eternal struggle. I doubt not that, sometimes, a despairing negro, when jumping over the ship's sides to escape from the white devils who surrounded him, has believed there was no vindication of right; it is horrible to think of, but it seemed so. I doubt not that sometimes the negro's friend, in the face of scornful and brutal hundreds of traders and drivers, has felt his heart sink. Especially, it seems to me, some degree of despondency is pardonable, when he observes the men of conscience and of intellect, his own natural allies and champions,—those whose attention should be nailed to the grand objects of this cause, so hotly offended by whatever incidental petulances or infirmities of indiscreet defenders of the negro, as to permit themselves to be ranged with the enemies of the human race; and names which should be the alarums of liberty and the watchwords of truth, are mixed up with all the rotten rabble of selfishness and tyranny. I assure myself that this coldness and blindness will pass away. A single noble wind of sentiment will scatter them forever. I am sure that the good and wise elders, the ardent and generous youth, will not permit what is incidental and exceptional to withdraw their devotion from the essential and permanent characters of the question. There have been moments, I said, when men might be forgiven who doubted. Those moments are past. Seen in masses, it cannot be disputed, there is progress in human society. There is a blessed necessity by which the interest of men is always driving them to the right; and, again, making all crime mean and ugly. The genius of the Saxon race, friendly to liberty; the enterprise, the very muscular vigor of this nation, are inconsistent with slavery. The Intellect, with blazing eye, looking through history from the beginning onward, gazes on this blot and it disappears. The sentiment of Right, once very low and indistinct, but ever more articulate, because it is the voice of the universe, pronounces Freedom. The Power that built this fabric of things affirms it in the heart; and in the history of the First of August, has made a sign to the ages, of his will.

WAR

IT has been a favorite study of modern philosophy to indicate the steps of human progress, to watch the rising of a thought in one man's mind, the communication of it to a few, to a small minority, its expansion and general reception, until it publishes itself to the world by destroying the existing laws and institutions, and the generation of new. Looked at in this general and historical way, many things wear a very different face from that they show near by, and one at a time,—and, particularly, war. War, which to sane men at the present day begins to look like an epidemic insanity, breaking out here and there like the cholera or influenza, infecting men's brains instead of their bowels,—when seen in the remote past, in the infancy of society, appears a part of the connection of events, and, in its place, necessary.

WAR, to sane men at the present day, begins to look like an epidemic insanity, breaking out here and there like the cholera or influenza, infecting men's brains instead of their bowels.

¶ As far as history has preserved to us the slow unfoldings of any savage tribe, it is not easy to see how war could be avoided by such wild, passionate, needy, ungoverned, strong-bodied creatures. For in the infancy of society, when a thin population and improvidence make the supply of food and of shelter insufficient and very precarious, and when hunger, thirst, ague and frozen limbs universally take precedence of the wants of the mind and the heart, the necessities of the strong will certainly be satisfied at the cost of the weak, at whatever peril of future revenge. It is plain, too, that in the first dawnings of the religious sentiment, *that* blends itself with their passions and is oil to the fire. Not only every tribe has war-gods, religious festivals in victory, but *religious wars.*

¶ The student of history acquiesces the more readily in this copious bloodshed of the early annals, bloodshed in God's name too, when he learns that it is a temporary and preparatory state, and does actively forward the culture of man. War educates the senses, calls into action the will, perfects the physical constitution, brings men into such swift and close collision in critical moments that man measures man. On its own scale, on the virtues it loves, it endures no counterfeit, but shakes the whole society until every atom falls into the place its specific gravity assigns it. It presently finds the value of good sense and of foresight, and Ulysses takes rank next to Achilles. The leaders, picked men of a courage and vigor tried and augmented in fifty battles, are emulous to distinguish themselves above each other by new merits, as clemency, hospitality, splendor of living. The people imitate the chiefs. The strong tribe, in which war has become an art, attack and conquer their neighbors, and teach them their arts and virtues. New territory, augmented numbers and extended interests call out new virtues and abilities, and the tribe makes long strides. And, finally, when much progress has been made, all its secrets of wisdom and art are disseminated by its invasions. Plutarch, in his essay On the Fortune of Alexander, considers the invasion and conquest of the East by Alexander as one of the most bright and pleasing pages in history; and it must be owned

he gives sound reason for his opinion. It had the effect of uniting into one great interest the divided commonwealths of Greece, and infusing a new and more enlarged public spirit into the councils of their statesmen. It carried the arts and language and philosophy of the Greeks into the sluggish and barbarous nations of Persia, Assyria and India. It introduced the arts of husbandry among tribes of hunters and shepherds. It weaned the Scythians and Persians from some cruel and licentious practices to a more civil way of life. It introduced the sacredness of marriage among them. It built seventy cities, and sowed the Greek customs and humane laws over Asia, and united hostile nations under one code. It brought different families of the human race together,—to blows at first, but afterwards to truce, to trade and to intermarriage. It would be very easy to show analogous benefits that have resulted from military movements of later ages.

¶ Considerations of this kind lead us to a true view of the nature and office of war. We see it is the subject of all history; that it has been the principal employment of the most conspicuous men; that it is at this moment the delight of half the world, of almost all young and ignorant persons; that it is exhibited to us continually in the dumb show of brute nature, where war between tribes, and between individuals of the same tribe, perpetually rages. The microscope reveals miniature butchery in atomies and infinitely small biters that swim and fight in an illuminated drop of water; and the little globe is but a too faithful miniature of the large.

¶ What does all this war, beginning from the lowest races and reaching up to man, signify? Is it not manifest that it covers a great and beneficent principle, which Nature had deeply at heart? What is that principle?—It is self-help. Nature implants with life the instinct of self-help, perpetual struggle to be, to resist opposition, to attain to freedom, to attain to a mastery and the security of a permanent, self-defended being; and to each creature these objects are made so dear that it risks its life continually in the struggle for these ends.

¶ But whilst this principle, necessarily, is inwrought into the fabric of every creature, yet it is but *one* instinct; and though a primary one, or we may say the very first, yet the appearance of the other instincts immediately modifies and controls this; turns its energies into harmless, useful and high courses, showing thereby what was its ultimate design; and, finally, takes out its fangs. The instinct of self-help is very early unfolded in the coarse and merely brute form of war, only in the childhood and imbecility of the other instincts, and remains in that form only until their development. It is the ignorant and childish part of mankind that is the fighting part. Idle and vacant minds want excitement, as all boys kill cats. Bull-baiting, cockpits and the boxer's ring are the enjoyment of the part of society whose animal nature alone has been developed. In some parts of this country, where the intellectual and moral faculties have as yet scarcely any culture, the absorbing topic of all conversation is whipping; who fought, and which whipped? Of man, boy or beast, the only trait that much interests the speakers is the pugnacity. And why? Because the speaker has as yet no other image of manly activity and virtue, none of endurance, none of perseverance, none of charity, none of the attainment of truth. Put him into a circle of cultivated men, where the conversation broaches the great questions that besiege the human reason, and he would be dumb and unhappy, as an Indian in church.

¶ To men of a sedate and mature spirit, in whom is any knowledge or mental activity, the detail of battle becomes insupportably tedious and revolting. It is like the talk of one of those monomaniacs whom we sometimes meet in society, who converse on horses; and Fontenelle expressed a volume of meaning when he said, "I hate war, for it spoils conversation."

¶ Nothing is plainer than that the sympathy with war is a juvenile and temporary state. Not only the moral

sentiment, but trade, learning and whatever makes intercourse, conspire to put it down. Trade, as all men know, is the antagonist of war. Wherever there is no property, the people will put on the knapsack for bread; but trade is instantly endangered and destroyed. And, moreover, trade brings men to look each other in the face, and gives the parties the knowledge that these enemies over sea or over the mountain are such men as we; who laugh and grieve, who love and fear, as we do. And learning and art, and especially religion weave ties that make war look like fratricide, as it is. And as all history is the picture of war, as we have said, so it is no less true that it is the record of the mitigation and decline of war. Early in the eleventh and twelfth centuries, the Italian cities had grown so populous and strong that they forced the rural nobility to dismantle their castles, which were dens of cruelty, and come and reside in the towns. The popes, to their eternal honor, declared religious jubilees, during which all hostilities were suspended throughout Christendom, and man had a breathing space. The increase of civility has abolished the use of poison and of torture, once supposed as necessary as navies now. And, finally, the art of war, what with gunpowder and tactics, has made, as all men know, battles less frequent and less murderous.

WAR covers a great and beneficent principle. It is self-help. Nature implants with life the instinct of self-help, perpetual struggle to attain to a mastery and the security of a permanent, self-defended being; and to each creature these objects are made so dear that it risks its life continually in the struggle for these ends.

¶ By all these means, war has been steadily on the decline; and we read with astonishment of the beastly fighting of the old times. Only in Elizabeth's time, out of the European waters, piracy was all but universal. The proverb was, —"No peace beyond the line;" and the seaman shipped on the buccaneer's bargain, "No prey, no pay." The celebrated Cavendish, who was thought in his times a good Christian man, wrote thus to Lord Hunsdon, on his return from a voyage round the world: "Sept. 1588. It hath pleased Almighty God to suffer me to circumpass the whole globe of the world, entering in at the Strait of Magellan, and returning by the Cape of Buena Esperança; in which voyage, I have either discovered or brought certain intelligence of all the rich places of the world, which were ever discovered by any Christian. I navigated along the coast of Chili, Peru, and New Spain, *where I made great spoils. I burnt and sunk nineteen sail of ships, small and great. All the villages and towns that ever I landed at, I burned and spoiled.* And had I not been discovered upon the coast, I had taken great quantity of treasure. The matter of most profit to me was a great ship of the king's, which I took at California," etc. And the good Cavendish piously begins this statement, —"It hath pleased Almighty God."

¶ Indeed, our American annals have preserved the vestiges of barbarous warfare down to more recent times. I read in Williams's History of Maine, that "Assacombuit, the Sagamore of the Anagunticook tribe, was remarkable for his turpitude and ferocity above all other known Indians; that, in 1705, Vaudreuil sent him to France, where he was introduced to the king. When he appeared at court, he lifted up his hand and said, 'This hand has slain a hundred and fifty of your majesty's enemies within the territories of New England.' This so pleased the king that he knighted him, and ordered a pension of eight livres a day to be paid him during life." This valuable person, on his return to America, took to killing his own

neighbors and kindred, with such appetite that his tribe combined against him, and would have killed him had he not fled his country forever.

¶ The scandal which we feel in such facts certainly shows that we have got on a little. All history is the decline of war, though the slow decline. All that society has yet gained is mitigation: the doctrine of the right of war still remains.

¶ For ages (for ideas work in ages, and animate vast societies of men) the human race has gone on under the tyranny —shall I so call it? —of this first brutish form of their effort to be men; that is, for ages they have shared so much of the nature of the lower animals, the tiger and the shark, and the savages of the water-drop. They have nearly exhausted all the good and all the evil of this form: they have held as fast to this degradation as their worst enemy could desire; but all things have an end, and so has this. The eternal germination of the better has unfolded new powers, new instincts, which were really concealed under this rough and base rind. The sublime question has startled one and another happy soul in different quarters of the globe,—Cannot love be, as well as hate? Would not love answer the same end, or even a better? Cannot peace be, as well as war?

TRADE, as all men know, is the antagonist of war. Trade brings men to look each other in the face, and gives the parties the knowledge that these enemies over sea or over the mountain are such men as we; who laugh and grieve, who love and fear, as we do.

¶ This thought is no man's invention, neither St. Pierre's nor Rousseau's, but the rising of the general tide in the human soul,—and rising highest, and first made visible, in the most simple and pure souls, who have therefore announced it to us beforehand; but presently we all see it. It has now become so distinct as to be a social thought: societies can be formed on it. It is expounded, illustrated, defined, with different degrees of clearness; and its actualization, or the measures it should inspire, predicted according to the light of each seer.

¶ The idea itself is the epoch; the fact that it has become so distinct to any small number of persons as to become a subject of prayer and hope, of concert and discussion,—*that* is the commanding fact. This having come, much more will follow. Revolutions go not backward. The star once risen, though only one man in the hemisphere has yet seen its upper limb in the horizon, will mount and mount, until it becomes visible to other men, to multitudes, and climbs the zenith of all eyes. And so it is not a great matter how long men refuse to believe the advent of peace: war is on its last legs; and a universal peace is as sure as is the prevalence of civilization over barbarism, of liberal governments over feudal forms. The question for us is only *How soon?*

¶ That the project of peace should appear visionary to great numbers of sensible men; should appear laughable even, to numbers; should appear to the grave and good-natured to be embarrassed with extreme practical difficulties,—is very natural. "This is a poor, tedious society of yours," they say: "we do not see what good can come of it. Peace! why, we are all at peace now. But if a foreign nation should wantonly insult or plunder our commerce, or, worse yet, should land on our shores to rob and kill, you would not have us sit, and be robbed and killed? You mistake the times; you overestimate the virtue of men. You forget that the quiet which now sleeps in cities and in farms, which lets the wagon go unguarded and the farmhouse unbolted, rests on the perfect

understanding of all men that the musket, the halter and the jail stand behind there, ready to punish any disturber of it. All admit that this would be the best policy, if the world were all a church, if all the men were the best men, if all would agree to accept this rule. But it is absurd for one nation to attempt it alone."

¶ In the first place, we answer that we never make much account of objections which merely respect the actual state of the world at this moment, but which admit the general expediency and permanent excellence of the project. What is the best must be the true; and what is true—that is, what is at bottom fit and agreeable to the constitution of man—must at last prevail over all obstruction and all opposition. There is no good now enjoyed by society that was not once as problematical and visionary as this. It is the tendency of the true interest of man to become his desire and steadfast aim.

WAR is on its last legs; and a universal peace is as sure as is the prevalence of civilization over barbarism, of liberal governments over feudal forms. The question for us is only

How soon?

¶ But, further, it is a lesson which all history teaches wise men, to put trust in ideas, and not in circumstances. We have all grown up in the sight of frigates and navy-yards, of armed forts and islands, of arsenals and militia. The reference to any foreign register will inform us of the number of thousand or million men that are now under arms in the vast colonial system of the British Empire, of Russia, Austria and France; and one is scared to find at what a cost the peace of the globe is kept. This vast apparatus of artillery, of fleets, of stone bastions and trenches and embankments; this incessant patrolling of sentinels; this waving of national flags; this reveille and evening gun; this martial music and endless playing of marches and singing of military and naval songs seem to us to constitute an imposing actual, which will not yield in centuries to the feeble, deprecatory voices of a handful of friends of peace.

¶ Thus always we are daunted by the appearances; not seeing that their whole value lies at bottom in the state of mind. It is really a thought that built this portentous war-establishment, and a thought shall also melt it away. Every nation and every man instantly surround themselves with a material apparatus which exactly corresponds to their moral state, or their state of thought. Observe how every truth and every error, each a *thought* of some man's mind, clothes itself with societies, houses, cities, language, ceremonies, newspapers. Observe the ideas of the present day,—orthodoxy, skepticism, missions, popular education, temperance, anti-masonry, anti-slavery; see how each of these abstractions has embodied itself in an imposing apparatus in the community; and how timber, brick, lime and stone have flown into convenient shape, obedient to the master-idea reigning in the minds of many persons.

¶ You shall hear, some day, of a wild fancy which some man has in his brain, of the mischief of secret oaths. Come again one or two years afterwards, and you shall see it has built great houses of solid wood and brick and mortar. You shall see a hundred presses printing a million sheets; you shall see men and horses and wheels made to walk, run and roll for it: this great body of matter thus executing that one man's wild thought. This happens daily, yearly about us, with half thoughts, often with flimsy lies, pieces of policy and speculation. With good nursing they will last

three or four years before they will come to nothing. But when a truth appears,—as, for instance, a perception in the wit of one Columbus that there is land in the Western Sea; though he alone of all men has that thought, and they all jeer,—it will build ships; it will build fleets; it will carry over half Spain and half England; it will plant a colony, a state, nations and half a globe full of men.

¶ We surround ourselves always, according to our freedom and ability, with true images of ourselves in things, whether it be ships or books or cannons or churches. The standing army, the arsenal, the camp and the gibbet do not appertain to man. They only serve as an index to show where man is now; what a bad, ungoverned temper he has; what an ugly neighbor he is; how his affections halt; how low his hope lies. He who loves the bristle of bayonets only sees in their glitter what beforehand he feels in his heart. It is avarice and hatred; it is that quivering lip, that cold, hating eye, which built magazines and powder-houses.

ALL history teaches wise men, to put trust in ideas, and not in circumstances. It is really a thought that built this portentous war-establishment, and a thought shall also melt it away. Every nation and every man instantly surround themselves with a material apparatus which exactly corresponds to their moral state, or their state of thought.

¶ It follows of course that the least change in the man will change his circumstances; the least enlargement of his ideas, the least mitigation of his feelings in respect to other men; if, for example, he could be inspired with a tender kindness to the souls of men, and should come to feel that every man was another self with whom he might come to join, as left hand works with right. Every degree of the ascendency of this feeling would cause the most striking changes of external thinges: the tents would be struck; the men-of-war would rot ashore; the arms rust; the cannon would become street-posts; the pikes, a fisher's harpoon; the marching regiment would be a caravan of emigrants, *peaceful* pioneers at the fountains of the Wabash and the Missouri. And so it must and will be: bayonet and sword must first retreat a little from their ostentatious prominence; then quite hide themselves, as the sheriff's halter does now, inviting the attendance only of relations and friends; and then, lastly, will be transferred to the museums of the curious, as poisoning and torturing tools are at this day.

¶ War and peace thus resolve themselves into a mercury of the state of cultivation. At a certain stage of his progress, the man fights, if he be of a sound body and mind. At a certain higher stage, he makes no offensive demonstration, but is alert to repel injury, and of an unconquerable heart. At a still higher stage, he comes into the region of holiness; passion has passed away from him; his warlike nature is all converted into an active medicinal principle; he sacrifices himself, and accepts with alacrity wearisome tasks of denial and charity; but, being attacked, he bears it and turns the other cheek, as one engaged, throughout his being, no longer to the service of an individual but to the common soul of all men.

¶ Since the peace question has been before the public mind, those who affirm its right and expediency have naturally been met with objections more or less weighty. There are cases frequently put by the curious,—moral problems, like those problems in arithmetic which in long winter evenings the rustics try the hardness of their heads in ciphering out. And chiefly it is said,—Either accept this principle for better, for worse, carry it out to the end, and meet its absurd consequences; or else, if you pretend to set

an arbitrary limit, a "Thus far, no farther," then give up the principle, and take that limit which the common sense of all mankind has set, and which distinguishes offensive war as criminal, defensive war as just. Otherwise, if you go for no war, then be consistent, and give up self-defence in the highway, in your own house. Will you push it thus far? Will you stick to your principle of non-resistance when your strong-box is broken open, when your wife and babes are insulted and slaughtered in your sight? If you say yes, you only invite the robber and assassin; and a few bloody-minded desperadoes would soon butcher the good.

¶ In reply to this charge of absurdity on the extreme peace doctrine, as shown in the supposed consequences, I wish to say that such deductions consider only one half of the fact. They look only at the passive side of the friend of peace, only at his passivity; they quite omit to consider his activity. But no man, it may be presumed, ever embraced the cause of peace and philanthropy for the sole end and satisfaction of being plundered and slain. A man does not come the length of the spirit of martrydom without some active purpose, some equal motive, some flaming love. If you have a nation of men who have risen to that height of moral cultivation that they will not declare war or carry arms, for they have not so much madness left in their brains, you have a nation of lovers, of benefactors, of true, great and able men. Let me know more of that nation; I shall not find them defenceless, with idle hands swinging at their sides. I shall find them men of love, honor and truth; men of an immense industry; men whose influence is felt to the end of the earth; men whose very look and voice carry the sentence of honor and shame; and all forces yield to their energy and persuasion. Whenever we see the doctrine of peace embraced by a nation, we may be assured it will not be one that invites injury; but one, on the contrary, which has a friend in the bottom of the heart of every man, even of the violent and the base; one against which no weapon can prosper; one which is looked upon as the asylum of the human race and has the tears and the blessings of mankind.

WHEN a truth appears,—as, for instance, a perception in the wit of one Columbus that there is a land in the Western Sea; though he alone of all men has that thought, and they all jeer,—it will build ships; it will build fleets; it will carry over half Spain and half England; it will plant a colony, a state, nations and half a globe full of men.

¶ In the second place, as far as it respects individual action in difficult and extreme cases, I will say, such cases seldom or never occur to the good and just man; nor are we careful to say, or even to know, what in such crises is to be done. A wise man will never impawn his future being and action, and decide beforehand what he shall do in a given extreme event. Nature and God will instruct him in that hour.

¶ The question naturally arises, How is this new aspiration of the human mind to be made visible and real? How is it to pass out of thoughts into things?

¶ Not, certainly, in the first place, *in the way of routine and mere forms,*—the universal specific of modern politics; not by organizing a society, and going through a course of resolutions and public manifestoes, and being thus formally accredited to the public and to the civility of the newspapers. We have played this game to tediousness. In some of our cities they choose noted duellists as presidents and officers of anti-duelling societies. Men who love that bloated vanity called public opinion think all is well if they have once got their bantling through a sufficient course of speeches and cheerings, of one, two, or three pub-

lic meetings; as if *they* could do anything: they vote and vote, cry hurrah on both sides, no man responsible, no man caring a pin. The next season, an Indian war, or an aggression on our commerce by Malays; or the party this man votes with have an appropriation to carry through Congress: instantly he wags his head the other way, and cries, Havoc and war!

¶ This is not to be carried by public opinion, but by private opinion, by private conviction, by private, dear and earnest love. For the only hope of this cause is in the increased insight, and it is to be accomplished by the spontaneous teaching, of the cultivated soul, in its secret experience and meditation, —that it is now time that it should pass out of the state of beast into the state of man; it is to hear the voice of God, which bids the devils that have rended and torn him come out of him and let him now be clothed and walk forth in his right mind.

THE microscope reveals miniature butchery in atomies and infinitely small biters that swim and fight in an illuminated drop of water: and the little globe is but a too faithful miniature of the large.

¶ Nor, in the next place, is the peace principle to be carried into effect by fear. It can never be defended, it can never be executed, by cowards. Everything great must be done in the spirit of greatness. The manhood that has been in war must be transferred to the cause of peace, before war can lose its charm, and peace be venerable to men.

¶ The attractiveness of war shows one thing through all the throats of artillery, the thunders of so many sieges, the sack of towns, the jousts of chivalry, the shock of hosts,—this namely, the conviction of man universally, that a man should be himself responsible, with goods, health and life, for his behavior; that he should not ask of the state protection; should ask nothing of the state; should be himself a kingdom and a state; fearing no man; quite willing to use the opportunities and advantages that good government throw in his way, but nothing daunted, and not really the poorer if government, law and order went by the board; because in himself reside infinite resources; because he is sure of himself, and never needs to ask another what in any crisis it behooves him to do.

¶ What makes to us the attractiveness of the Greek heroes? of the Roman? What makes the attractiveness of that romantic style of living which is the material of ten thousand plays and romances, from Shakspeare to Scott; the feudal baron, the French, the English nobility, the Warwicks, Plantagenets? It is their absolute self-dependence. I do not wonder at the dislike some of the friends of peace have expressed at Shakspeare. The veriest churl and Jacobin cannot resist the influence of the style and manners of these haughty lords. We are affected, as boys and barbarians are, by the appearance of a few rich and wilful gentlemen who take their honor into their own keeping, defy the world, so confident are they of their courage and strength, and whose appearance is the arrival of so much life and virtue. In dangerous times they are presently tried, and therefore their name is a flourish of trumpets. They, at least, affect us as a reality. They are not shams, but the substance of which that age and world is made. They are true heroes for their time. They make what is in their minds the greatest sacrifice. They will, for an injurious word, peril all their state and wealth, and go to the field. Take away that principle of responsibleness, and they become pirates and ruffians.

¶ This self-subsistency is the charm of

war; for this self-subsistency is essential to our idea of man. But another age comes, a truer religion and ethics open, and a man puts himself under the dominion of principles. I see him to be the servant of truth, of love and of freedom, and immovable in the waves of the crowd. The man of principle, that is, the man who, without any flourish of trumpets, titles of lordship or train of guards, without any notice of his action abroad, expecting none, takes in solitude the right step uniformly, on his private choice and disdaining consequences,—does not yield, in my imagination, to any man. He is willing to be hanged at his own gate, rather than consent to any compromise of his freedom or the suppression of his conviction. I regard no longer those names that so tingled in my ear. This is a baron of a better nobility and a stouter stomach.

¶ The cause of peace is not the cause of cowardice. If peace is sought to be defended or preserved for the safety of the luxurious and the timid, it is a sham, and the peace will be base. War is better, and the peace will be broken. If peace is to be maintained, it must be by brave men, who have come up to the same height as the hero, namely, the will to carry their life in their hand, and stake it at any instant for their principle, but who have gone one step beyond the hero, and will not seek another man's life;—men who have, by their intellectual insight or else by their moral elevation, attained such a perception of their own intrinsic worth that they do not think property or their own body a sufficient good to be saved by such dereliction of principle as treating a man like a sheep.

¶ If the universal cry for reform of so many inveterate abuses, with which society rings,—if the desire of a large class of young men for a faith and hope, intellectual and religious, such as they have not yet found, be an omen to be trusted; if the disposition to rely more, in study and in action, on the unexplored riches of the human constitution,—if the search of the sublime laws of morals and the sources of hope and trust, in man, and not in books, in the present, and not in the past, proceed; if the rising generation can be provoked to think it unworthy to nestle into every abomination of the past, and shall feel the generous darings of austerity and virtue, then war has a short day, and human blood will cease to flow.

YOU shall hear, some day, of a wild fancy which some man has in his brain. Come again one or two years afterwards, and you shall see it has built great houses of solid wood and brick and mortar. This happens daily, yearly about us.

¶ It is of little consequence in what manner, through what organs, this purpose of mercy and holiness is effected. The proposition of the Congress of Nations is undoubtedly that at which the present fabric of our society and the present course of events do point. But the mind, once prepared for the reign of principles, will easily find modes of expressing its will. There is the highest fitness in the place and time in which this enterprise is begun. Not in an obscure corner, not in a feudal Europe, not in an antiquated appanage where no onward step can be taken without rebellion, is this seed of benevolence laid in the furrow, with tears of hope; but in this broad America of God and man, where the forest is only now falling, or yet to fall, and the green earth opened to the inundation of emigrant men from all quarters of oppression and guilt; here, where not a family, not a few men, but mankind, shall say what shall be; here, we ask, Shall it be War, or shall it be Peace?

THE FUGITIVE SLAVE LAW

Address to Citizens of Concord, May 3, 1851

FELLOW CITIZENS: I accepted your invitation to speak to you on the great question of these days, with very little consideration of what I might have to offer: for there seems to be no option. The last year has forced us all into politics, and made it a paramount duty to seek what it is often a duty to shun. We do not breathe well. There is infamy in the air. I have a new experience. I wake in the morning with a painful sensation, which I carry about all day, and which, when traced home, is the odious remembrance of that ignominy which has fallen on Massachusetts, which robs the landscape of beauty, and takes the sunshine out of every hour. I have lived all my life in this state, and never had any experience of personal inconvenience from the laws, until now. They never came near me to any discomfort before. I find the like sensibility in my neighbors; and in that class who take no interest in the ordinary questions of party politics. There are men who are as sure indexes of the equity of legislation and of the same state of public feeling, as the barometer is of the weight of the air, and it is a bad sign when these are discontented, for though they snuff oppression and dishonor at a distance, it is because they are more impressionable: the whole population will in a short time be as painfully affected.

¶ Every hour brings us from distant quarters of the Union the expression of mortification at the late events in Massachusetts, and at the behavior of Boston. The tameness was indeed shocking. Boston, of whose fame for spirit and character we have all been so proud; Boston, whose citizens, intelligent people in England told me they could always distinguish by their culture among Americans; the Boston of the American Revolution, which figures so proudly in John Adams's Diary, which the whole country has been reading; Boston, spoiled by prosperity, must bow its ancient honor in the dust, and make us irretrievably ashamed. In Boston, we have said with such lofty confidence, no fugitive slave can be arrested, and now, we must transfer our vaunt to the country, and say, with a little less confidence, no fugitive man can be arrested here; at least we can brag thus until to-morrow, when the farmers also may be corrupted.

¶ The tameness is indeed complete. The only haste in Boston, after the rescue of Shadrach, last February, was, who should first put his name on the list of volunteers in aid of the marshal. I met the smoothest of Episcopal Clergymen the other day, and allusion being made to Mr. Webster's treachery, he blandly replied, "Why, do you know, I thing *that* the great action of his life." It looked as if in the city and the suburbs all were involved in one hot haste of terror,—presidents of colleges, and professors, saints, and brokers, insurers, lawyers, importers, manufacturers: not an unpleasing sentiment, not a liberal recollection, not so much as a snatch of an old song for freedom, dares intrude on their passive obedience.

¶ The panic has paralyzed the journals, with the fewest exceptions, so that one cannot open a newspaper without being disgusted by new records of shame. I cannot read longer even the local good news. When I look down the columns at the titles of paragraphs, "Education in Massachusetts," "Board of Trade," "Art Union," "Revival of Religion," what bitter mockeries! The very convenience of property, the house and land we occupy, have lost their best value, and a man looks gloomily at his children, and thinks, "What have I done that you should begin life in dishonor?" Every liberal study is discredited,—literature and science appear effeminate, and the hiding of the head.

The college, the churches, the schools, the very shops and factories are discredited; real estate, every kind of wealth, every branch of industry, every avenue to power, suffers injury, and the value of life is reduced. Just now a friend came into my house and said, "If this law shall be repealed I shall be glad that I have lived; if not I shall be sorry that I was born." What kind of law is that which extorts language like this from the heart of a free and civilized people? ¶ One intellectual benefit we owe to the late disgraces. The crisis had the illuminating power of a sheet of lightning at midnight. It showed truth. It ended a good deal of nonsense we had been wont to hear and to repeat, on the 19th of April, the 17th of June, the 4th of July. It showed the slightness and unreliableness of our social fabric, it showed what stuff reputations are made of, what straws we dignify by office and title, and how competent we are to give counsel and help in a day of trial. It showed the shallowness of leaders; the divergence of parties from their alleged grounds; showed that men would not stick to what they had said, that the resolutions of public bodies, or the pledges never so often given and put on record of public men, will not bind them. The fact comes out more plainly that you cannot rely on any man for the defence of truth, who is not constitutionally or by blood and temperament on that side. A man of a greedy and unscrupulous selfishness may maintain morals when they are in fashion: but he will not stick. However close Mr. Wolf's nails have been pared, however neatly he has been shaved, and tailored, and set up on end, and taught to say, "Virtue and Religion," he cannot be relied on at a pinch: he will say, morality means pricking a vein. The popular assumption that all men loved freedom, and believed in the Christian religion, was found hollow American brag; only persons who were known and tried benefactors are found standing for freedom: the sentimentalists went downstream. I question the value of our civilization, when I see that the public mind had never less hold of the strongest of all truths. The sense of injustice is blunted, —a sure sign of the shallowness of our intellect. I cannot accept the railroad and telegraph in exchange for reason and charity. It is not skill in iron locomotives that makes so fine civility, as the jealousy of liberty. I cannot think the most judicious tubing a compensation for metaphysical debility. What is the use of admirable law-forms, and political forms, if a hurricane of party feeling and a combination of monied interests can beat them to the ground? What is the use of courts, if judges only quote authorities, and no judge exerts original jurisdiction, or recurs to first principles? What is the use of a Federal Bench, if its opinions are the political breath of the hour? And what is the use of constitutions, if all the guaranties provided by the jealousy of ages for the protection of liberty are made of no effect, when a bad act of Congress finds a willing commissioner? The levity of the public mind has been shown in the past year by the most extravagant actions. Who could have believed it, if foretold that a hundred guns would be fired in Boston on the passage of the Fugitive Slave Bill? Nothing proves the want of all thought, the absence of standard in men's minds, more than the dominion of party. Here are humane people who have tears for misery, an open purse for want; who should have been the defenders of the poor man, are found his embittered enemies, rejoicing in his rendition,—merely from party ties. I thought none, that was not ready to go on all fours, would back this law. And yet here are upright men, *compotes mentis,* husbands, fathers, trustees, friends, open, generous, brave, who can see nothing in this claim for bare humanity, and the health and honor of their native State, but canting fanaticism, sedition and "one idea." Because of this preoccupied mind, the whole wealth and power of Boston—two hundred thousand souls, and one hundred and eighty millions of money—are thrown into the scale of crime: and the poor black boy, whom the fame of Bos-

ton had reached in the recesses of a vile swamp, or in the alleys of Savannah, on arriving here finds all this force employed to catch him. The famous town of Boston is his master's hound. The learning of the universities, the culture of elegant society, the acumen of lawyers, the majesty of the Bench, the eloquence of the Christian pulpit, the stoutness of Democracy, the respectability of the Whig party are all combined to kidnap him.

¶ The crisis is interesting as it shows the self-protecting nature of the world and of the Divine laws. It is the law of the world,—as much immorality as there is, so much misery. The greatest prosperity will in vain resist the greatest calamity. You borrow the succor of the devil and he must have his fee. He was never known to abate a penny of his rents. In every nation all the immorality that exists breeds plagues. But of the corrupt society that exists we have never been able to combine any pure prosperity. There is always something in the very advantages of a condition which hurts it. Africa has its malformation; England has its Ireland; Germany its hatred of classes; France its love of gunpowder; Italy its Pope; and America, the most prosperous country in the Universe, has the greatest calamity in the Universe, negro slavery.

¶ Let me remind you a little in detail how the natural retribution acts in reference to the statute which Congress passed a year ago. For these few months have shown very conspicuously its nature and impracticability. It is contravened:

¶ 1. By the sentiment of duty. An immoral law makes it a man's duty to break it, at every hazard. For virtue is the very self of every man. It is therefore a principle of law that an immoral contract is void, and that an immoral statute is void. For, as laws do not make right, and are simply declaratory of a right which already existed, it is not to be presumed that they can so stultify themselves as to command injustice.

¶ It is remarkable how rare in the history of tyrants is an immoral law. Some color, some indirection was always used. If you take up the volumes of the "Universal History," you will find it difficult searching. The precedents are few. It is not easy to parallel the wickedness of this American law. And that is the head and body of this discontent, that the law is immoral.

¶ Here is a statute which enacts the crime of kidnapping,—a crime on one footing with arson and murder. A man's right to liberty is as inalienable as his right to life.

¶ Pains seem to have been taken to give us in this statute a wrong pure from any mixture of right. If our resistance to this law is not right, there is no right. This is not meddling with other people's affairs: this is hindering other people from meddling with us. This is not going crusading into Virginia and Georgia after slaves, who, it is alleged, are very comfortable where they are:—that amiable argument falls to the ground: but this is befriending in our own State, on our own farms, a man who has taken the risk of being shot, or burned alive, or cast into the sea, or starved to death, or suffocated in a wooden box, to get away from his driver: and this man who has run the gauntlet of a thousand miles for his freedom, the statute says, you men of Massachusetts shall hunt, and catch, and send back again to the dog-hutch he fled from.

¶ It is contrary to the primal sentiment of duty, and therefore all men that are born are, in proportion to their power of thought and their moral sensibility, found to be the natural enemies of this law. The resistance of all moral beings is secured to it. I had thought, I confess, what must come at last would come at first, a banding of all men against the authority of this statute. I thought it a point on which all sane men were agreed, that the law must respect the public morality. I thought that all men of all conditions had been made sharers of a certain experience, that in certain rare and retired moments they had been made to see how man is man, or what makes the essence of rational beings, namely, that whilst animals have to do

with eating the fruits of the ground, men have to do with rectitude, with benefit, with truth, with something which *is*, independent of appearances: and that this tie makes the substantiality of life, this, and not their ploughing, or sailing, their trade or the breeding of families. I thought that every time a man goes back to his own thoughts, these angels receive him, talk with him, and that, in the best hours, he is uplifted in virtue of this essence, into a peace and into a power which the material world cannot give: that these moments counterbalance the years of drudgery, and that this owning of a law, be it called morals, religion, or godhead, or what you will, constituted the explanation of life, the excuse and indemnity for the errors and calamities which sadden it. In long years consumed in trifles, they remember these moments, and are consoled. I thought it was this fair mystery, whose foundations are hidden in eternity, which made the basis of human society, and of law; and that to pretend anything else, as that the acquisition of property was the end of living, was to confound all distinctions, to make the world a greasy hotel, and, instead of noble motives and inspirations, and a heaven of companions and angels around and before us, to leave us in a grimacing menagerie of monkeys and idiots. All arts, customs, societies, books, and laws, are good as they foster and concur with this spiritual element: all men are beloved as they raise us to it; hateful as they deny or resist it. The laws especially draw their obligation only from their concurrence with it.

¶ I am surprised that lawyers can be so blind as to suffer the principles of Law to be discredited. A few months ago, in my dismay at hearing that the Higher Law was reckoned a good joke in the courts, I took pains to look into a few law-books. I had often heard that the Bible constituted a part of every technical law library, and that it was a principle in law that immoral laws are void.

¶ I found, accordingly, that the great jurists, Cicero, Grotius, Coke, Blackstone, Burlamaqui, Montesquieu, Vattel, Burke, Mackintosh, Jefferson, do all affirm this. I have no intention to recite these passages I had marked:—such citation indeed seems to be something cowardly (for no reasonable person needs a quotation from Blackstone to convince him that white cannot be legislated to be black), and shall content myself with reading a single passage. Blackstone admits the sovereignty "antecedent to any positive precept, of the law of Nature," among whose principles are, "that we should live on, should hurt nobody, and should render unto every one his due," etc. "*No human laws are of any validity, if contrary to this.*" "Nay, if any human law should allow or enjoin us to commit a crime" (his instance is murder), "we are bound to transgress that human law; or else we must offend both the natural and divine." Lord Coke held that where an Act of Parliament is against common right and reason, the common law shall control it, and adjudge it to be void. Chief Justice Hobart, Chief Justice Holt, and Chief Justice Mansfield held the same.

AN immoral law makes it a man's duty to break it, at every hazard. As laws do not make right, and are simply declaratory of a right which already existed, it is not to be presumed that they can so stultify themselves as to command injustice.

¶ Lord Mansfield, in the case of the slave Somerset, wherein the *dicta* of Lords Talbot and Hardwicke had been cited, to the effect of carrying back the slave to the West Indies, said, "I care not for the supposed *dicta* of judges,

however eminent, if they be contrary to all principle." Even the *Canon Law* says (*in malis promissis non expedit servare fidem*), "Neither allegiance nor oath can bind to obey that which is wrong."

¶ No engagement (to a sovereign) can oblige or even authorize a man to violate the laws of Nature. All authors who have any conscience or modesty agree that a person ought not to obey such commands as are evidently contrary to the laws of God. Those governors of places who bravely refused to execute the barbarous orders of Charles IX. for the famous "Massacre of St. Bartholomew," have been universally praised; and the court did not dare to punish them, at least openly. "Sire," said the brave Orte, governor of Bayonne, in his letter, "I have communicated your majesty's command to your faithful inhabitants and warriors in the garrison, and I have found there only good citizens, and brave soldiers; not one hangman: therefore, both they and I must humbly entreat your majesty to be pleased to employ your arms and lives in things that are possible, however hazardous they may be, and we will exert ourselves to the last drop of our blood."

¶ The practitioners should guard this dogma well, as the palladium of the profession, as their anchor in the respect of mankind. Against a principle like this, all the arguments of Mr. Webster are the spray of a child's squirt against a granite wall.

¶ 2. It is contravened by all the sentiments. How can a law be enforced that fines pity, and imprisons charity? As long as men have bowels, they will disobey. You know that the Act of Congress of September 18, 1850, is a law which every one of you will break on the earliest occasion. There is not a manly Whig, or a manly Democrat, of whom, if a slave were hidden in one of our houses from the hounds, we should not ask with confidence to lend his wagon in aid of his escape, and he would lend it. The man would be too strong for the partisan.

¶ And here I may say that it is absurd, what I often hear, to accuse the friends of freedom in the North with being the occasion of the new stringency of the Southern slave-laws. If you starve or beat the orphan, in my presence, and I accuse your cruelty, can I help it? In the words of Electra in the Greek tragedy, "'T is you that say it, not I. You do the deeds, and your ungodly deeds find me the words." Will you blame the ball for rebounding from the floor, blame the air for rushing in where a vacuum is made or the boiler for exploding under pressure of steam? These facts are after laws of the world, and so is it law, that, when justice is violated, anger begins. The very defence which the God of Nature has provided for the innocent against cruelty is the sentiment of indignation and pity in the bosom of the beholder. Mr. Webster tells the President that "he has been in the North, and he has found no man, whose opinion is of any weight, who is opposed to the law." Oh, Mr. President, trust not the information! The gravid old Universe goes spawning on; the womb conceives and the breasts give suck to thousands and millions of hairy babes formed not in the image of your statute, but in the image of the Universe; too many to be bought off; too many than they can be rich, and therefore peaceable; and necessitated to express first or last every feeling of the heart. You can keep no secret, for whatever is true some of them will unreasonably say. You can commit no crime, for they are created in their sentiments conscious of and hostile to it; and unless you can suppress the newspaper, pass a law against book-shops, gag the English tongue in America, all short of this is futile. This dreadful English Speech is saturated with songs, proverbs and speeches that flatly contradict and defy every line of Mr. Mason's statute. Nay, unless you can draw a sponge over those seditious Ten Commandments which are the root of our European and American civilization; and over that eleventh commandment, "Do unto others as you would have them do to you," your labor is vain.

¶ 3. It is contravened by the written laws themselves, because the sentiments, of course, write the statutes. Laws are merely declaratory of the natural sentiments of mankind, and the language of all permanent laws will be in contradiction to any immoral enactment. And thus it happens here: Statute fights against Statute. By the law of Congress March 2, 1807, it is piracy and murder, punishable with death, to enslave a man on the coast of Africa. By law of Congress September, 1850, it is a high crime and misdemeanor, punishable with fine and imprisonment, to resist the reënslaving a man on the coast of America. Off soundings, it is piracy and murder to enslave him. On soundings, it is fine and prison not to reënslave. What kind of legislation is this? What kind of constitution which covers it? And yet the crime which the second law ordains is greater than the crime which the first law forbids under penalty of the gibbet. For it is a greater crime to reënslave a man who has shown himself fit for freedom, than to enslave him at first, when it might be pretended to be a mitigation of his lot as a captive in war.

¶ 4. It is contravened by the mischiefs it operates. A wicked law cannot be executed by good men, and must be by bad. Flagitious men must be employed, and every act of theirs is a stab at the public peace. It cannot be executed at such a cost, and so it brings a bribe in its hand. This law comes with infamy in it, and out of it. It offers a bribe in its own clauses for the consummation of the crime. To serve it, low and mean people are found by the groping of the government. No government ever found it hard to pick up tools for base actions. If you cannot find them in the huts of the poor, you shall find them in the palaces of the rich. Vanity can buy some, ambition others, and money others. The first execution of the law, as was inevitable, was a little hesitating; the second was easier; and the glib officials became, in a few weeks, quite practised and handy at stealing men. But worse, not the officials alone are bribed, but the whole community is solicited. The scowl of the community is attempted to be averted by the mischievous whisper, "Tariff and Southern market, if you will be quiet: no tariff and loss of Southern market, if you dare to murmur." I wonder that our acute people who have learned that the cheapest police is dear schools, should not find out that an immoral law costs more than the loss of the custom of a Southern city.

¶ The humiliating scandal of great men warping right into wrong was followed up very fast by the cities. New York advertised in Southern markets that it would go for slavery, and posted the names of merchants who would not. Boston, alarmed, entered into the same design. Philadelphia, more fortunate, had no conscience at all, and, in this auction of the rights of mankind, rescinded all its legislation against slavery. And the Boston "Advertiser," and the "Courier," in these weeks, urge the same course on the people of Massachusetts. Nothing remains in this race of roguery but to coax Connecticut or Maine to outbid us all by adopting slavery into its constitution.

¶ Great is the mischief of a legal crime. Every person who touches this business is contaminated. There has not been in our lifetime another moment when public men were personally lowered by their political action. But here are gentlemen whose believed probity was the confidence and fortification of multitudes, who, by fear of public opinion, or through the dangerous ascendency of Southern manners, have been drawn into the support of this foul business. We poor men in the country who might once have thought it an honor to shake hands with them, or to dine at their boards, would now shrink from their touch, nor could they enter our humblest doors. You have a law which no man can obey, or abet the obeying, without loss of self-respect and forfeiture of the name of gentleman. What shall we say of the functionary by whom the recent rendition was made? If he has rightly defined his powers, and has no authority to try the case, but

only to prove the prisoner's identity, and remand him, what office is this for a reputable citizen to hold? No man of honor can sit on that bench. It is the extension of the planter's whipping-post; and its incumbents must rank with a class from which the turnkey, the hangman and the informer are taken, necessary functionaries, it may be, in a state, but to whom the dislike and the ban of society universally attaches.

¶ 5. These resistances appear in the history of the statute, in the retributions which speak so loud in every part of this business, that I think a tragic poet will know how to make it a lesson for all ages. Mr. Webster's measure was, he told us, final. It was a pacification, it was a suppression, a measure of conciliation and adjustment. These were his words at different times: "there was to be no parleying more;" it was "irrepealable." Does it look final now? His final settlement has dislocated the foundations. The state-house shakes like a tent. His pacification has brought all the honesty in every house, all scrupulous and good-hearted men, all women, and all children, to accuse the law. It has brought United States swords into the streets, and chains round the court-house. "A measure of pacification and union." What is its effect? To make one sole subject for conversation and painful thought throughout the continent, namely, slavery. There is not a man of thought or of feeling but is concentrating his mind on it. There is not a clerk but recites its statistics; not a politician but is watching its incalculable energy in the elections; not a jurist but is hunting up precedents; not a moralist but is prying into its quality; not an economist but is computing its profit and loss: Mr. Webster can judge whether this sort of solar microscope brought to bear on his law is likely to make opposition less. The only benefit that has accrued from the law is its service to education. It has been like a university to the entire people. It has turned every dinner-table into a debating-club, and made every citizen a student of natural law. When a moral quality comes into politics, when a right is invaded, the discussion draws on deeper sources: general principles are laid bare, which cast light on the whole frame of society. And it is cheering to behold what champions the emergency called to this poor black boy; what subtlety, what logic, what learning, what exposure of the mischief of the law; and, above all, with what earnestness and dignity the advocates of freedom were inspired. It was one of the best compensations of this calamity.

¶ But the Nemesis works underneath again. It is a power that makes noonday dark, and draws us on to our undoing; and its dismal way is to pillory the offender in the moment of his triumph. The hands that put the chain on the slave are in that moment manacled. Who has seen anything like that which is now done? The words of John Randolph, wiser than he knew, have been ringing ominously in all echoes for thirty years, words spoken in the heat of the Missouri debate. "We do not govern the people of the North by our black slaves, but by their own white slaves. We know what we are doing. We have conquered you once, and we can and will conquer you again. Ay, we will drive you to the wall, and when we have you there once more, we will keep you there and nail you down like base money." These words resounding ever since from California to Oregon, from Cape Florida to Cape Cod, come down now like the cry of Fate, in the moment when they are fulfilled. By white slaves, by a white slave, are we beaten. Who looked for such ghastly fulfilment, or to see what we see? Hills and Halletts, servile editors by the hundred, we could have spared. But him, our best and proudest, the first man of the North, in the very moment of mounting the throne, irresistibly taking the bit in his mouth and the collar on his neck, and harnessing himself to the chariot of the planters.

¶ The fairest American fame ends in this filthy law. Mr. Webster cannot choose but regret his law. He must learn

that those who make fame accuse him with one voice; that those who have no points to carry that are not identical with public morals and generous civilization, that the obscure and private who have no voice and care for none, so long as things go well, but who feel the disgrace of the new legislation creeping like miasma into their homes, and blotting the daylight,—those to whom his name was once dear and honored, as the manly statesman to whom the choicest gifts of Nature had been accorded, disown him: that he who was their pride in the woods and mountains of New England is now their mortification,—they have torn down his picture from the wall, they have thrust his speeches into the chimney. No roars of New York mobs can drown this voice in Mr. Webster's ear. It will outwhisper all the salvos of the "Union Committees'" cannon. But I have said too much on this painful topic. I will not pursue that bitter history.

A WICKED law cannot be executed by good men, and must be by bad. Flagitious men must be employed, and every act of theirs is a stab at the public peace. No government ever found it hard to pick up tools for base actions.

¶ But passing from the ethical to the political view, I wish to place this statute, and we must use the introducer and substantial author of the bill as an illustration of the history. I have as much charity for Mr. Webster, I think, as any one has. I need not say how much I have enjoyed his fame. Who has not helped to praise him? Simply he was the one eminent American of our time, whom we could produce as a finished work of Nature. We delighted in his form and face, in his voice, in his eloquence, in his power of labor, in his concentration, in his large understanding, in his daylight statement, simple force; the facts lay like the strata of a cloud, or like the layers of the crust of the globe. He saw things as they were, and he stated them so. He has been by his clear perceptions and statements in all these years the best head in Congress, and the champion of the interests of the Northern seaboard: but as the activity and growth of slavery began to be offensively felt by his constituents, the senator became less sensitive to these evils. They were not for him to deal with: he was the commercial representative. He indulged occasionally in excellent expression of the known feeling of the New England people; but, when expected and when pledged, he omitted to speak, and he omitted to throw himself into the movement in those critical moments when his leadership would have turned the scale. At last, at a fatal hour, this sluggishness accumulated to downright counteraction, and, very unexpectedly to the whole Union, on the 7th March, 1850, in opposition to his education, association, and to all his own most explicit language for thirty years, he crossed the line, and became the head of the slavery party in this country.

¶ Mr. Webster perhaps is only following the laws of his blood and constitution. I suppose his pledges were not quite natural to him. Mr. Webster is a man who lives by his memory, a man of the past, not a man of faith or of hope. He obeys his powerful animal nature;—and his finely developed understanding only works truly and with all its force, when it stands for animal good; that is, for property. He believes, in so many words, that government exists for the protection of property. He looks at the Union as an estate, a large farm, and is excellent in the completeness of his defence of it so far. He adheres to the letter. Happily he was born late,—after the independence had been

declared, the Union agreed to, and the constitution settled. What he finds already written, he will defend. Lucky that so much had got well written when he came. For he has no faith in the power of self-government; none whatever in extemporizing a government. Not the smallest municipal provision, if it were new, would receive his sanction. In Massachusetts, in 1776, he would, beyond all question, have been a refugee. He praises Adams and Jefferson, but it is a past Adams and Jefferson that his mind can entertain. A present Adams and Jefferson he would denounce. So with the eulogies of liberty in his writings,—they are sentimentalism and youthful rhetoric. He can celebrate it, but it means as much from him as from Metternich or Talleyrand. This is all inevitable from his constitution. All the drops of his blood have eyes that look downward. It is neither praise nor blame to say that he has no moral perception, no moral sentiment, but in that region—to use the phrase of the phrenologists—a hole in the head. The scraps of morality to be gleaned from his speeches are reflections of the mind of others; he says what he hears said, but often makes signal blunders in their use. In Mr. Webster's imagination the American Union was a huge Prince Rupert's drop, which, if so much as the smallest end be shivered off, the whole will snap into atoms. Now the fact is quite different from this. The people are loyal, law-loving, law-abiding. They prefer order, and have no taste for misrule and uproar.

¶ The destiny of this country is great and liberal, and is to be greatly administered. It is to be administered according to what is, and is to be, and not according to what is dead and gone. The union of this people is a real thing, an alliance of men of one flock,, one language, one religion, one system of manners and ideas. I hold it to be a real and not a statute union. The people cleave to the Union, because they see their advantage in it, the added power of each.

¶ I suppose the Union can be left to take care of itself. As much real union as there is, the statutes will be sure to express; as much disunion as there is, no statute can long conceal. Under the Union I suppose the fact to be that there are really two nations, the North and the South. It is not slavery that severs them, it is climate and temperament. The South does not like the North, slavery or no slavery, and never did. The North likes the South well enough, for it knows its own advantages. I am willing to leave them to the facts. If they continue to have a binding interest, they will be pretty sure to find it out: if not, they will consult their peace in parting. But one thing appears certain to me, that, as soon as the constitution ordains an immoral law, it ordains disunion. The law is suicidal, and cannot be obeyed. The Union is at an end as soon as an immoral law is enacted. And he who writes a crime into the statute-book digs under the foundations of the Capitol to plant there a powder-magazine, and lays a train.

¶ I pass up to say a few words to the question, What shall we do?

¶ 1. What in our federal capacity is our relation to the nation?

¶ 2. And what as citizens of a state?

¶ I am an Unionist as we all are, or nearly all, and I strongly share the hope of mankind in the power, and therefore, in the duties of the Union; and I conceive it demonstrated,—the necessity of common sense and justice entering into the laws. What shall we do? First, abrogate this law; then, proceed to confine slavery to slave states, and help them effectually to make an end of it. Or shall we, as we are advised on all hands, lie by, and wait the progress of the census? But will Slavery lie by? I fear not. She is very industrious, gives herself no holidays. No proclamations will put her down. She got Texas and now will have Cuba, and means to keep her majority. The experience of the past gives us no encouragement to lie by. Shall we call a new Convention, or will any expert statesman furnish us a plan for the summary or gradual winding up of slavery, so far as the Republic is its patron? Where is the South itself? Since

it is agreed by all sane men of all parties (or was yesterday) that slavery is mischievous, why does the South itself never offer the smallest counsel of her own? I have never heard in twenty years any project except Mr. Clay's. Let us hear any project with candor and respect. Is it impossible to speak of it with reason and good nature? It is really the project fit for this country to entertain and accomplish. Everything invites emancipation. The grandeur of the design, the vast stake we hold; the national domain, the new importance of Liberia; the manifest interest of the slave states; the religious effort of the free states; the public opinion of the world;—all join to demand it.

¶ We shall one day bring the States shoulder to shoulder and the citizens man to man to exterminate slavery. Why in the name of common sense and the peace of mankind is not this made the subject of instant negotiation and settlement? Why not end this dangerous dispute on some ground of fair compensation on one side, and satisfaction on the other to the conscience of the free states? It is really the great task fit for this country to accomplish, to buy that property of the planters, as the British nation bought the West Indian slaves. I say buy,—never conceding the right of the planter to own, but that we may acknowledge the calamity of his position, and bear a countryman's share in relieving him; and because it is the only practicable course, and is innocent. Here is a right social or public function, which one man cannot do, which all men must do. 'T is said it will cost two thousand millions of dollars. Was there ever any contribution that was so enthusiastically paid as this will be? We will have a chimney-tax. We will give up our coaches, and wine, and watches. The churches will melt their plate. The father of his country shall wait, well pleased, a little longer for his monument; Franklin for his, the Pilgrim Fathers for theirs, and the patient Columbus for his. The mechanics will give, the needle-women will give; the children will have cent-societies. Every man in the land will give a week's work to dig away this accursed mountain of sorrow once and forever out of the world.

¶ Nothing is impracticable to this nation, which it shall set itself to do. Were ever men so endowed, so placed, so weaponed? Their power of territory seconded by a genius equal to every work. By new arts the earth is subdued, roaded, tunnelled, telegraphed, gas-lighted; vast amounts of old labor disused; the sinews of man being relieved by sinews of steam. We are on the brink of more wonders. The sun paints; presently we shall organize the echo, as now we do the shadow. Chemistry is extorting new aids. The genius of this people, it is found, can do anything which can be done by men. These thirty nations are equal to any work, and are every moment stronger. In twenty-five years they will be fifty millions. Is it not time to do something besides ditching and draining, and making the earth mellow and friable? Let them confront this mountain of poison,—bore, blast, excavate, pulverize and shovel it once for all, down into the bottomless Pit. A thousand millions were cheap.

¶ But grant that the heart of financiers, accustomed to practical figures, shrinks within them at these colossal amounts, and the embarrassments which complicate the problem; granting that these contingencies are too many to be spanned by any human geometry, and that these evils are to be relieved only by the wisdom of God working in ages, —and by what instrument, whether Liberia, whether flax-cotton, whether the working out this race by Irish and Germans, none can tell, or by what sources God has guarded his law; still the question recurs, What must we do? One thing is plain, we cannot answer for the Union, but we must keep Massachusetts true. It is of unspeakable importance that she play her honest part. She must follow no vicious examples. Massachusetts is a little state: countries have been great by ideas. Europe is little compared with Asia and Africa; yet Asia and Africa are its ox and its ass. Europe, the least of all the continents,

has almost monopolized for twenty centuries the genius and power of them all. Greece was the least part of Europe. Attica a little part of that,—one tenth of the size of Massachusetts. Yet that district still rules the intellect of men. Judæa was a petty country. Yet these two, Greece and Judæa, furnish the mind and the heart by which the rest of the world is sustained; and Massachusetts is little, but, if true to itself, can be the brain which turns about the behemoth.

¶ I say Massachusetts, but I mean Massachusetts in all the quarters of her dispersion; Massachusetts, as she is the mother of all the New England states, and as she sees her progeny scattered over the face of the land, in the farthest South, and the uttermost West. The immense power of rectitude is apt to be forgotten in politics. But they who have brought the great wrong on the country have not forgotten it. They avail themselves of the known probity and honor of Massachusetts, to endorse the statute. The ancient maxim still holds that never was any injustice effected except by the help of justice. The great game of the government has been to win the sanction of Massachusetts to the crime. Hitherto they have succeeded only so far as to win Boston to a certain extent. The behavior of Boston was the reverse of what it should have been: it was supple and officious, and it put itself into the base attitude of pander to the crime. It should have placed obstruction at every step. Let the attitude of the states be firm. Let us respect the Union to all honest ends. But also respect an older and wider union, the law of Nature and rectitude. Massachusetts is as strong as the Universe, when it does that. We will never intermeddle with your slavery,—but you can in no wise be suffered to bring it to Cape Cod and Berkshire. This law must be made inoperative. It must be abrogated and wiped out of the statute-book; but whilst it stands there, it must be disobeyed. We must make a small state great, by making every man in it true. It was the praise of Athens, "She could not lead countless armies into the field, but she knew how with a litle band to defeat those who could." Every Roman reckoned himself at least a match for a Province. Every Dorian did. Every Englishman in Australia, in South Africa, in India, or in whatever barbarous country their forts and factories have been set up,—represents London, represents the art, power and law of Europe. Every man educated at the Northern school carries the like advantages into the South. For it is confounding distinctions to speak of the geographic sections of this country as of equal civilization. Every nation and every man bows, in spite of himself, to a higher mental and moral existence; and the sting of the late disgraces is that this royal position of Massachusetts was foully lost, that the well-known sentiment of her people was not expressed. Let us correct this error. In this one fastness let truth be spoken and right done. Here let there be no confusion in our ideas. Let us not lie, not steal, nor help to steal, and let us not call stealing by any fine name, such as "Union" or "Patriotism." Let us know that not by the public, but by ourselves, our safety must be bought. That is the secret of Southern power, that they rest not on meetings, but on private heats and courages.

¶ It is very certain from the perfect guaranties in the constitution, and the high arguments of the defenders of liberty, which the occasion called out, that there is sufficient margin in the statute and the law for the spirit of the Magistrate to show itself, and one, two, three occasions have just now occurred, and past, in either of which, if one man had felt the spirit of Coke or Mansfield or Parsons, and read the law with the eye of freedom, the dishonor of Massachusetts had been prevented, and a limit set to these encroachments forever.

THE FUGITIVE SLAVE LAW

Lecture Read in New York City March 7, 1854

I DO not often speak to public questions;—they are odious and hurtful, and it seems like meddling or leaving your work. I have my own spirits in prison;—spirits in deeper prisons, whom no man visits if I do not. And then I see what havoc it makes with any good mind, a dissipated philanthropy. The one thing not to be forgiven to intellectual persons is, not to know their own task, or to take their ideas from others. From this want of manly rest in their own and rash acceptance of other people's watchwords come the imbecility and fatigue of their conversation. For they cannot affirm these from any original experience, and of course not with the natural movement and total strength of their nature and talent, but only from their memory, only from their cramped position of standing for their teacher. They say what they would have you believe, but what they do not quite know.

¶ My own habitual view is to the well-being of students or scholars. And it is only when the public event affects them, that it very seriously touches me. And what I have to say is to them. For every man speaks mainly to a class whom he works with and more or less fully represents. It is to these I am beforehand related and engaged, in this audience or out of it—to them and not to others. And yet, when I say the class of scholars or students,—that is a class which comprises in some sort all mankind, comprises every man in the best hours of his life; and in these days not only virtually but actually. For who are the readers and thinkers of 1854? Owing to the silent revolution which the newspaper has wrought, this class has come in this country to take in all classes. Look into the morning trains which, from every suburb, carry the business men into the city to their shops, counting-rooms, work-yards and warehouses. With them enters the car—the newsboy, that humble priest of politics, finance, philosophy, and religion. He unfolds his magical sheets,—twopence a head his bread of knowledge costs—and instantly the entire rectangular assembly, fresh from their breakfast, are bending as one man to their second breakfast. There is, no doubt, chaff enough in what he brings; but there is fact, thought, and wisdom in the crude mass, from all regions of the world.

¶ I have lived all my life without suffering any known inconvenience from American Slavery. I never saw it; I never heard the whip; I never felt the check on my free speech and action, until, the other day, when Mr. Webster, by his personal influence, brought the Fugitive Slave Law on the country. I say Mr. Webster, for though the Bill was not his, it is yet notorious that he was the life and soul of it, that he gave it all he had: it cost him his life, and under the shadow of his great name inferior men sheltered themselves, threw their ballots for it and made the law. I say inferior men. There were all sorts of what are called brilliant men, accomplished men, men of high station, a President of the United States, Senators, men of eloquent speech, but men without self-respect, without character, and it was strange to see that office, age, fame, talent, even a repute for honesty, all count for nothing. They had no opinions, they had no memory for what they had been saying like the Lord's Prayer all their lifetime: they were only looking to what their great Captain did: if he jumped, they jumped, if he stood on his head, they did. In ordinary, the supposed sense of their district and State is their guide, and that holds them to the part of liberty and justice. But it is always a little difficult to decipher what this public sense is; and when a great man comes who knots

up into himself the opinions and wishes of the people, it is so much easier to follow him as an exponent of this. He too is responsible; they will not be. It will always suffice to say,—"I followed him."

¶ I saw plainly that the great show their legitimate power in nothing more than in their power to misguide us. I saw that a great man, deservedly admired for his powers and their general right direction, was able,—fault of the total want of stamina in public men,—when he failed, to break them all with him, to carry parties with him.

¶ In what I have to say of Mr. Webster I do not confound him with vulgar politicians before or since. There is always base ambition enough, men who calculate on the immense ignorance of the masses; that is their quarry and farm: they use the constituencies at home only for their shoes. And, of course, they can drive out from the contest any honorable man. The low can best win the low, and all men like to be made much of. There are those too who have power and inspiration only to do ill. Their talent or their faculty deserts them when they undertake anything right. Mr. Webster had a natural ascendancy of aspect and carriage which distinguished him over all his contemporaries. His countenance, his figure, and his manners were all in so grand a style, that he was, without effort, as superior to his most eminent rivals as they were to the humblest; so that his arrival in any place was an event which drew crowds of people, who went to satisfy their eyes, and could not see him enough. I think they looked at him as the representative of the American Continent. He was there in his Adamitic capacity, as if he alone of all men did not disappoint the eye and the ear, but was a fit figure in the landscape.

¶ I remember his appearance at Bunker's Hill. There was the Monument, and here was Webster. He knew well that a little more or less of rhetoric signified nothing: he was only to say plain and equal things,—grand things if he had them, and, if he had them not, only to abstain from saying unfit things,—and the whole occasion was answered by his presence. It was a place for behavior more than for speech, and Mr. Webster walked through his part with entire success. His excellent organization, the perfection of his elocution and all that thereto belongs,—voice, accent, intonation, attitude, manner,—we shall not soon find again. Then he was so thoroughly simple and wise in his rhetoric; he saw through his matter, hugged his fact so close, went to the principle or essential, and never indulged in a weak flourish, though he knew perfectly well how to make such exordiums, episodes and perorations as might give perspective to his harangues without in the least embarrassing his march or confounding his transitions. In his statement things lay in daylight; we saw them in order as they were. Though he knew very well how to present his own personal claims, yet in his argument he was intellectual,—stated his fact pure of all personality, so that his splendid wrath, when his eyes became lamps, was the wrath of the fact and the cause he stood for.

¶ His power, like that of all great masters, was not in excellent parts, but was total. He had a great and everywhere equal propriety. He worked with that closeness of adhesion to the matter in hand which a joiner or a chemist uses, and the same quiet and sure feeling of right to his place that an oak or a mountain have to theirs. After all his talents have been described, there remains that perfect propriety which animated all the details of the action or speech with the character of the whole, so that his beauties of detail are endless. He seemed born for the bar, born for the senate, and took very naturally a leading part in large private and in public affairs; for his head distributed things in their right places, and what he saw so well he compelled other people to see also. Great is the privilege of eloquence. What gratitude does every man feel to him who speaks well for the right,—who translates truth into language entirely plain and clear!

¶ The history of this country has given a disastrous importance to the defects of this great man's mind. Whether evil influences and the corruption of politics, or whether original infirmity, it was the misfortune of his country that with this large understanding he had not what is better than intellect, and the source of its health. It is a law of our nature that great thoughts come from the heart. If his moral sensibility had been proportioned to the force of his understanding, what limits could have been set to his genius and beneficent power? But he wanted that deep source of inspiration. Hence a sterility of thought, the want of generalization in his speeches, and the curious fact that, with a general ability which impresses all the world, there is not a single general remark, not an observation on life and manners, not an aphorism that can pass into literature from his writings.

LIBERTY is an accurate index, in MEN AND NATIONS of general progress.

¶ Four years ago to-night, on one of those high critical moments in history when great issues are determined, when the powers of right and wrong are mustered for conflict, and it lies with one man to give a casting vote,—Mr. Webster, most unexpectedly, threw his whole weight on the side of Slavery, and caused by his personal and official authority the passage of the Fugitive Slave Bill.

¶ It is remarked of the Americans that they value dexterity too much, and honor too little; that they think they praise a man more by saying that he is "smart" than by saying that he is right. Whether the defect be national or not, it is the defect and calamity of Mr. Webster; and it is so far true of his countrymen, namely, that the appeal is sure to be made to his physical and mental ability when his character is assailed. His speeches on the seventh of March, and at Albany, at Buffalo, at Syracuse, and Boston are cited in justification. And Mr. Webster's literary editor believes that it was his wish to rest his fame on the speech of the seventh of March. Now, though I have my own opinions on this seventh of March discourse and those others, and think them very transparent and very open to criticism,—yet the secondary merits of a speech, namely, its logic, its illustrations, its points, etc., are not here in question. Nobody doubts that Daniel Webster could make a good speech. Nobody doubts that there were good and plausible things to be said on the part of the South. But this is not a question of ingenuity, not a question of syllogisms, but of sides. *How came he there?*

¶ There are always texts and thoughts and arguments. But it is the genius and temper of the man which decides whether he will stand for right or for might. Who doubts the power of any fluent debater to defend either of our political parties, or any client in our courts? There was the same law in England for Jeffries and Talbot and Yorke to read slavery out of, and for Lord Mansfield to read freedom. And in this country one sees that there is always margin enough in the statute for a liberal judge to read one way and a servile judge another.

¶ But the question which History will ask is broader. In the final hour, when he was forced by the peremptory necessity of the closing armies to take a side,—did he take the part of great principles, the side of humanity and justice, or the side of abuse and oppression and chaos?

¶ Mr. Webster decided for Slavery, and that, when the aspect of the institution was no longer doubtful, no longer feeble and apologetic and proposing soon to end itself, but when it was strong, aggressive, and threatening an illimitable increase. He listened to State reasons and hopes, and left, with much complacency we are told, the testament of his speech to the astonished State of Massachusetts, *vera pro gratis;* a ghastly result of all those years of experience in affairs, this, that there was nothing better for the foremost American man to tell his countrymen than that Slavery was now at that strength that they must beat down their conscience and become kidnappers for it.

¶ This was like the doleful speech falsely ascribed to the patriot Brutus: "Virtue, I have followed thee through life, and I find thee but a shadow." Here was a question of an immoral law; a question agitated for ages, and settled always in the same way by every great jurist, that an immoral law cannot be valid. Cicero, Grotius, Coke, Blackstone, Burlamaqui, Vattel, Burke, Jefferson, do all affirm this, and I cite them, not that they can give evidence to what is indisputable, but because, though lawyers and practical statesmen, the habit of their profession did not hide from them that this truth was the foundation of States.

¶ Here was the question, Are you for man and for the good of man; or are you for the hurt and harm of man? It was the question whether man shall be treated as leather? whether the Negro shall be, as the Indians were in Spanish America, a piece of money? Whether this system, which is a kind of mill or factory for converting men into monkeys, shall be upheld and enlarged? And Mr. Webster and the country went for the application to these poor men of quadruped law.

¶ People were expecting a totally different course from Mr. Webster. If any man had in that hour possessed the weight with the country which he had acquired, he could have brought the whole country to its senses. But not a moment's pause was allowed. Angry parties went from bad to worse, and the decision of Webster was accompanied with everything offensive to freedom and good morals. There was something like an attempt to debauch the moral sentiment of the clergy and of the youth. Burke said he "would pardon something to the spirit of liberty." But by Mr. Webster the opposition to the law was sharply called treason, and prosecuted so. He told the people at Boston "they must conquer their prejudices;" that "agitation of the subject of Slavery must be suppressed." He did as immoral men usually do, made very low bows to the Christian Church, and went through all the Sunday decorums; but when allusion was made to the question of duty and the sanctions of morality, he very frankly said, at Albany, "Some higher law, something existing somewhere between here and the third heaven,—I do not know where." And if the reporters say true, this wretched atheism found some laughter in the company.

¶ I said I had never in my life up to this time suffered from the Slave Institution. Slavery in Virginia or Carolina was like Slavery in Africa or the Feejees, for me. There was an old fugitive law, but it had become, or was fast becoming, a dead letter, and, by the genius and laws of Massachusetts, inoperative. The new Bill made it operative, required me to hunt slaves, and it found citizens in Massachusetts willing to act as judges and captors. Moreover, it discloses the secret of the new times, that Slavery was no longer mendicant, but was become aggressive and dangerous.

¶ The way in which the country was dragged to consent to this, and the disastrous defection (on the miserable cry of Union) of the men of letters, of the colleges, of educated men, nay, of some preachers of religion,—was the darkest passage in the history. It showed that our prosperity had hurt us, and that we could not be shocked by crime. It showed that the old religion and the sense of the right had faded and gone

out; that while we reckoned ourselves a highly cultivated nation, our bellies had run away with our brains, and the principles of culture and progress did not exist.

¶ For I suppose that liberty is an accurate index, in men and nations, of general progress. The theory of personal liberty must always appeal to the most refined communities and to the men of the rarest perception and of delicate moral sense. For there are rights which rest on the finest sense of justice, and, with every degree of civility, it will be more truly felt and defined. A barbarous tribe of good stock will, by means of their best heads, secure substantial liberty. But where there is any weakness in a race, and it becomes in a degree matter of concession and protection from their stronger neighbors, the incompatibility and offensiveness of the wrong will of course be most evident to the most cultivated. For it is,—is it not?—the essence of courtesy, of politeness, of religion, of love, to prefer another, to postpone oneself, to protect another from oneself. That is the distinction of the gentleman, to defend the weak and redress the injured, as it is of the savage and the brutal to usurp and use others.

¶ In Massachusetts, as we all know, there has always existed a predominant conservative spirit. We have more money and value of every kind than other people, and wish to keep them. The plea on which freedom was resisted was Union. I went to certain serious men, who had a little more reason than the rest, and inquired why they took this part? They answered that they had no confidence in their strength to resist the Democratic party; that they saw plainly that all was going to the utmost verge of license; each was vying with his neighbor to lead the party, by proposing the worst measure, and they threw themselves on the extreme conservatism, as a drag on the wheel: that they knew Cuba would be had, and Mexico would be had, and they stood stiffly on conservatism, and as near to monarchy as they could, only to moderate the velocity with which the car was running down the precipice. In short, their theory was despair; the Whig wisdom was only reprieve, a waiting to be last devoured. They side with Carolina, or with Arkansas, only to make a show of Whig strength, wherewith to resist a little longer this general ruin.

¶ I have a respect for conservatism. I know how deeply founded it is in our nature, and how idle are all attempts to shake ourselves free from it. We are all conservatives, half Whig, half Democrat, in our essences: and might as well try to jump out of our skins as to escape from our Whiggery. There are two forces in Nature, by whose antagonism we exist; the power of Fate, Fortune, the laws of the world, the order of things, or however else we choose to phrase it, the material necessities, on the one hand,—and Will or Duty or Freedom on the other.

¶ May and Must, and the sense of right and duty, on the one hand, and the material necessities on the other: May and Must. In vulgar politics the Whig goes for what has been, for the old necessities,—the Musts. The reformer goes for the Better, for the ideal good, for the Mays. But each of these parties must of necessity take in, in some measure, the principles of the other. Each wishes to cover the whole ground; to hold fast *and* to advance. Only, one lays the emphasis on keeping, and the other on advancing. I too think the *musts* are a safe company to follow, and even agreeable. But if we are Whigs, let us be Whigs of nature and science, and so for all the necessities. Let us know that, over and above all the *musts* of poverty and appetite, is the instinct of man to rise, and the instinct to love and help his brother.

¶ Now, Gentlemen, I think we have in this hour instruction again in the simplest lesson. Events roll, millions of men are engaged, and the result is the enforcing of some of those first commandments which we heard in the nursery. We never get beyond our first lesson, for, really, the world exists, as I

understand it, to teach the science of liberty, which begins with liberty from fear.

¶ The events of this month are teaching one thing plain and clear, the worthlessness of good tools to bad workmen; that official papers are of no use; resolutions of public meetings, platforms of conventions, no, nor laws, nor constitutions, any more. These are all declaratory of the will of the moment, and are passed with more levity and on grounds far less honorable than ordinary business transactions of the street.

¶ You relied on the constitution. It has not the word *slave* in it; and very good argument has shown that it would not warrant the crimes that are done under it; that, with provisions so vague for an object not named, and which could not be availed of to claim a barrel of sugar or a barrel of corn, the robbing of a man and of all his posterity is effected. You relied on the Supreme Court. The law was right, excellent law for the lambs. But what if unhappily the judges were chosen from the wolves, and give to all the law a wolfish interpretation? You relied on the Missouri Compromise. That is ridden over. You relied on State sovereignty in the Free States to protect their citizens. They are driven with contempt out of the courts and out of the territory of the Slave States,—if they are so happy as to get out with their lives,—and now you relied on these dismal guaranties infamously made in 1850; and, before the body of Webster is yet crumbled, it is found that they have crumbled. This eternal monument of his fame and of the Union is rotten in four years. They are no guaranty to the free states. They are a guaranty to the slave states that, as they have hitherto met with no repulse, they shall meet with none.

¶ I fear there is no reliance to be put on any kind or form of covenant, no, not on sacred forms, none on churches, none on bibles. For one would have said that a Christian would not keep slaves;—but the Christians keep slaves. Of course they will not dare to read the Bible? Won't they? They quote the Bible, quote Paul, quote Christ, to justify slavery. If slavery is good, then is lying, theft, arson, homicide, each and all good, and to be maintained by Union societies.

¶ These things show that no forms, neither constitutions, nor laws, nor covenants, nor churches, nor bibles, are of any use in themselves. The Devil nestles comfortably into them all. There is no help but in the head and heart and hamstrings of a man. Covenants are of no use without honest men to keep them; laws of none but with loyal citizens to obey them. To interpret Christ it needs Christ in the heart. The teachings of the Spirit can be apprehended only by the same spirit that gave them forth. To make good the cause of Freedom, you must draw off from all foolish trust in others. You must be citadels and warriors yourselves, declarations of Independence, the charter, the battle and the victory. Cromwell said, "We can only resist the superior training of the King's soldiers, by enlisting godly men." And no man has a right to hope that the laws of New York will defend him from the contamination of slaves another day until he has made up his mind that he will not owe his protection to the laws of New York, but to his own sense and spirit. Then he protects New York. He only who is able to stand alone is qualified for society. And that I understand to be the end for which a soul exists in this world,—to be himself the counterbalance of all falsehood and all wrong. "The army of unright is encamped from pole to pole, but the road of victory is known to the just." Everything may be taken away; he may be poor, he may be houseless, yet he will know out of his arms to make a pillow, and out of his breast a bolster. Why have the minority no influence? Because they have not a real minority of one.

¶ I conceive that thus to detach a man and make him feel that he is to owe all to himself, is the way to make him strong and rich; and here the optimist must find, if anywhere, the benefit of

Slavery. We have many teachers; we are in this world for culture, to be instructed in realities, in the laws of moral and intelligent nature; and our education is not conducted by toys and luxuries, but by austere and rugged masters, by poverty, solitude, passions, War, Slavery; to know that Paradise is under the shadow of swords; that divine sentiments which are always soliciting us are breathed into us from on high, and are an offset to a Universe of suffering and crime; that self-reliance, the height and perfection of man, is reliance on God. The insight of the religious sentiment will disclose to him unexpected aids in the nature of things. The Persian Saadi said, "Beware of hurting the orphan. When the orphan sets a-crying, the throne of the Almighty is rocked from side to side."

HE only who is able to stand alone is qualified for society. I conceive that to detach a man and make him feel that he is to owe all to himself, is the way to make him strong and rich.

¶ Whenever a man has come to this mind, that there is no Church for him but his believing prayer; no Constitution but his dealing well and justly with his neighbor; no liberty but his invincible will to do right,—then certain aids and allies will promptly appear: for the constitution of the Universe is on his side. It is of no use to vote down gravitation of morals. What is useful will last, whilst that which is hurtful to the world will sink beneath all the opposing forces which it must exasperate. The terror which the Marseillaise struck into oppression, it thunders again to-day,—

"Tout est soldat pour vous combattre."

Everything turns soldier to fight you down. The end for which man was made is not crime in any form, and a man cannot steal without incurring the penalties of the thief, though all the legislatures vote that it is virtuous, and though there be a general conspiracy among scholars and official persons to hold him up, and to say, *"Nothing is good but stealing."* A man who commits a crime defeats the end of his existence. He was created for benefit, and he exists for harm; and as well-doing makes power and wisdom, ill-doing takes them away. A man who steals another man's labor steals away his own faculties; his integrity, his humanity is flowing away from him. The habit of oppression cuts out the moral eyes, and, though the intellect goes on simulating the moral as before, its sanity is gradually destroyed. It takes away the presentiments.

¶ I suppose in general this is allowed, that if you have a nice question of right and wrong, you would not go with it to Louis Napoleon, or to a political hack, or to a slave-driver. The habit of mind of traders in power would not be esteemed favorable to delicate moral perception. American slavery affords no exception to this rule. No excess of good nature or of tenderness in individuals has been able to give a new character to the system, to tear down the whipping-house. The plea in the mouth of a slave-holder that the negro is an inferior race sounds very oddly in my ear. "The masters of slaves seem generally anxious to prove that they are not of a race superior in any noble quality to the meanest of their bondmen." And indeed when the Southerner points to the anatomy of the negro, and talks of chimpanzee,—I recall Montesquieu's remark, "It will not do to say that negroes are men, lest it should turn out that whites are not."

¶ Slavery is disheartening; but Nature

is not so helpless but it can rid itself at last of every wrong. But the spasms of Nature are centuries and ages, and will tax the faith of short-lived men. Slowly, slowly the Avenger comes, but comes surely. The proverbs of the nations affirm these delays, but affirm the arrival. They say, "God may consent, but not forever." The delay of the Divine Justice—this was the meaning and soul of the Greek Tragedy; this the soul of their religion. "There has come, too, one to whom lurking warfare is dear, Retribution, with a soul full of wiles; a violator of hospitality; guileful without the guilt of guile; limping, late in her arrival." They said of the happiness of the unjust, that "at its close it begets itself an offspring and does not die childless, and instead of good fortune, there sprouts forth for posterity ever-ravening calamity:"—

> "For evil word shall evil word be said,
> For murder-stroke a murder-stroke be paid.
> Who smites must smart."

¶ These delays, you see them now in the temper of the times. The national spirit in this country is so drowsy, preoccupied with interest, deaf to principle. The Anglo-Saxon race is proud and strong and selfish. They believe only in Anglo-Saxons. In 1825 Greece found America deaf, Poland found America deaf, Italy and Hungary found her deaf. England maintains trade, not liberty; stands against Greece; against Hungary; against Schleswig-Holstein; against the French Republic whilst it was a republic.

¶ To faint hearts the times offer no invitation, and torpor exists here throughout the active classes on the subject of domestic slavery and its appalling aggressions. Yes, that is the stern edict of Providence, that liberty shall be no hasty fruit, but that event on event, population on population, age on age, shall cast itself into the opposite scale, and not until liberty has slowly accumulated weight enough to counter-vail and preponderate against all this, can the sufficient recoil come. All the great cities, all the refined circles, all the statesmen, Guizot, Palmerston, Webster, Calhoun, are sure to be found befriending liberty with their words, and crushing it with their votes. Liberty is never cheap. It is made difficult, because freedom is the accomplishment and perfectness of man. He is a finished man; earning and bestowing good; equal to the world; at home in Nature and dignifying that; the sun does not see anything nobler, and has nothing to teach him. Therefore mountains of difficulty must be surmounted, stern trials met, wiles of seduction, dangers, healed by a quarantine of calamities to measure his strength before he dare say, I am free.

¶ Whilst the inconsistency of slavery with the principles on which the world is built guarantees its downfall, I own that the patience it requires is almost too sublime for mortals, and seems to demand of us more than mere hoping. And when one sees how fast the rot spreads,—it is growing serious,—I think we demand of superior men that they be superior in this,—that the mind and the virtue shall give their verdict in their day, and accelerate so far the progress of civilization. Possession is sure to throw its stupid strength for existing power, and appetite and ambition will go for that. Let the aid of virtue, intelligence and education be cast where they rightfully belong. They are organically ours. Let them be loyal to their own. I wish to see the instructed class here know their own flag, and not fire on their comrades. We should not forgive the clergy for taking on every issue the immoral side; nor the Bench, if it put itself on the side of the culprit; nor the Government, if it sustain the mob against the laws.

¶ It is a potent support and ally to a brave man standing single, or with a few, for the right, and out-voted and ostracized, to know that better men in other parts of the country appreciate the service and will rightly report him to his own and the next age. Without this assurance, he will sooner sink. He may well say, "If my countrymen do not care to be defended. I too will decline

the controversy, from which I only reap invectives and hatred." Yet the lovers of liberty may with reason tax the coldness and indifferentism of scholars and literary men. They are lovers of liberty in Greece and Rome and in the English Commonwealth, but they are lukewarm lovers of the liberty of America in 1854. The universities are not, as in Hobbes's time, "the core of rebellion," no, but the seat of inertness. They have forgotten their allegiance to the Muse, and grown worldly and political. I listened, lately, on one of those occasions when the university chooses one of its distinguished sons returning from the political arena, believing that senators and statesmen would be glad to throw off the harness and to dip again in the Castalian pools. But if audiences forget themselves, statesmen do not. The low bows to all the crockery gods of the day were duly made:—only in one part of the discourse the orator allowed to transpire, rather against his will, a little sober sense. It was this: "I am, as you see, a man virtuously inclined, and only corrupted by my profession of politics. I should prefer the right side. You, gentlemen of these literary and scientific schools, and the important class you represent, have the power to make your verdict clear and prevailing. Had you done so, you would have found me its glad organ and champion. Abstractly, I should have preferred that side. But you have not done it. You have not spoken out. You have failed to arm me. I can only deal with masses as I find them. Abstractions are not for me. I go then for such parties and opinions as have provided me with a working apparatus. I give you my word, not without regret, that I was first for you; and though I am now to deny and condemn you, you see it is not my will but the party necessity." Having made this manifesto and professed his adoration for liberty in the time of his grandfathers, he proceeded with his work of denouncing freedom and freemen at the present day, much in the tone and spirit in which Lord Bacon prosecuted his benefactor Essex. He denounced every name and aspect under which liberty and progress dare show themselves in this age and country, but with a lingering conscience which qualified each sentence with a recommendation to mercy.

¶ But I put it to every noble and generous spirit, to every poetic, every heroic, every religious heart, that not so is our learning, our education, our poetry, our worship to be declared. Liberty is aggressive, Liberty is the Crusade of all brave and conscientious men, the Epic Poetry, the new religion, the chivalry of all gentlemen. This is the oppressed Lady whom true knights on their oath and honor must rescue and save.

¶ Now at last we are disenchanted and shall have no more false hopes. I respect the Anti-Slavery Society. It is the Cassandra that has foretold all that has befallen, fact for fact, years ago; foretold all, and no man laid it to heart. It seemed, as the Turks say, "Fate makes that a man should not believe his own eyes." But the Fugitive Law did much to unglue the eyes of men, and now the Nebraska Bill leaves us staring. The Anti-Slavery Society will add many members this year. The Whig Party will join it; the Democrats will join it. The population of the free states will join it. I doubt not, at last, the slave states will join it. But be that sooner or later, and whoever comes or stays away, I hope we have reached the end of our unbelief, have come to a belief that there is a divine Providence in the world, which will not save us but through our own coöperation.

DEDICATION OF SOLDIERS' MONUMENT

Concord, April 19, 1867

FELLOW CITIZENS: The day is in Concord doubly our calendar day, as being the anniversary of the invasion of the town by the British troops in 1775, and of the departure of the company of volunteers for Washington, in 1861. We are all pretty well aware that the facts which make to us the interest of this day are in a great degree personal and local here; that every other town and city has its own heroes and memorial days, and that we can hardly expect a wide sympathy for the names and anecdotes which we delight to record. We are glad and proud that we have no monopoly of merit. We are thankful that other towns and cities are as rich; that the heroes of old and of recent date, who made and kept America free and united, were not rare or solitary growths, but sporadic over vast tracts of the Republic. Yet, as it is a piece of nature and the common sense that the throbbing chord that holds us to our kindred, our friends and our town, is not to be denied or resisted,—no matter how frivolous or unphilosophical its pulses,—we shall cling affectionately to our houses, our river and pastures, and believe that our visitors will pardon us if we take the privilege of talking freely about our nearest neighbors as in a family party;—well assured, meantime, that the virtues we are met to honor were directed on aims which command the sympathy of every loyal American citizen, were exerted for the protection of our common country, and aided its triumph.

¶ The town has thought fit to signify its honor for a few of its sons by raising an obelisk in the square. It is a simple pile enough,—a few slabs of granite, dug just below the surface of the soil, and laid upon the top of it; but as we have learned that the upheaved mountain, from which these discs or flakes were broken, was once a glowing mass at white heat, slowly crystallized, then uplifted by the central fires of the globe: so the roots of the events it appropriately marks are in the heart of the universe. I shall say of this obelisk, planted here in our quiet plains, what Richter says of the volcano in the fair landscape of Naples: "Vesuvius stands in this poem of Nature, and exalts everything, as war does the age."

¶ The art of the architect and the sense of the town have made these dumb stones speak; have, if I may borrow the old language of the church, converted these elements from a secular to a sacred and spiritual use; have made them look to the past and the future; have given them a meaning for the imagination and the heart. The sense of the town, the eloquent inscriptions the shaft now bears, the memories of these martyrs, the noble names which yet have gathered only their first fame, whatever good grows to the country out of the war, the largest results, the future power and genius of the land, will go on clothing this shaft with daily beauty and spiritual life. 'T is certain that a plain stone like this, standing on such memories, having no reference to utilities, but only to the grand instincts of the civil and moral man, mixes with surrounding nature,—by day with the changing seasons, by night the stars roll over it gladly,—becomes a sentiment, a poet, a prophet, an orator, to every townsman and passenger, an altar where the noble youth shall in all time come to make his secret vows.

¶ The old Monument, a short half-mile from this house, stands to signalize the first Revolution, where the people resisted offensive usurpations, offensive taxes of the British Parliament, claiming that there should be no tax without representation. Instructed by events, after the quarrel began, the Americans took higher ground, and

stood for political independence. But in the necessities of the hour, they overlooked the moral law, and winked at a practical exception to the Bill of Rights they had drawn up. They winked at the exception, believing it insignificant. But the moral law, the nature of things, did not wink at it, but kept its eye wide open. It turned out that this one violation was a subtle poison, which in eighty years corrupted the whole overgrown body politic, and brought the alternative of extirpation of the poison or ruin to the Republic.

¶ This new Monument is built to mark the arrival of the nation at the new principle,—say, rather, at its new acknowledgment, for the principle is as old as Heaven,—that only that state can live, in which injury to the least member is recognized as damage to the whole.

¶ Reform must begin at home. The aim of the hour was to reconstruct the South; but first the North had to be reconstructed. Its own theory and practice of liberty had got sadly out of gear, and must be corrected. It was done on the instant. A thunder-storm at sea sometimes reverses the magnets in the ship, and south is north. The storm of war works the like miracle on men. Every Democrat who went South came back a Republican, like the governors who, in Buchanan's time, went to Kansas, and instantly took the free-state colors. War, says the poet, is

"the arduous strife,
To which the triumph of all good is given."

Every principle is a war-note. When the rights of man are recited under any old government, every one of them is a declaration of war. War civilizes, rearranges the population, distributing by ideas,—the innovators on one side, the antiquaries on the other. It opens the eyes wider. Once we were patriots up to the town-bounds, or the state-line. But when you replace the love of family or clan by a principle, as freedom, instantly that fire runs over the state-line into New Hampshire, Vermont, New York and Ohio, into the prairie and beyond, leaps the mountains, bridges river and lake, burns as hotly in Kansas and California as in Boston, and no chemist can discriminate between one soil and the other. It lifts every population to an equal power and merit.

THE town has thought fit to signify its honor for a few of its sons by raising an obelisk in the square. A plain stone like this, becomes an altar where the noble youth shall in all time come to make his secret vows.

¶ As long as we debate in council, both sides may form their private guess what the event may be, or which is the strongest. But the moment you cry "Every man to his tent, O Israel!" the delusions of hope and fear are at an end;—the strength is now to be tested by the eternal facts. There will be no doubt more. The world is equal to itself. The secret architecture of things begins to disclose itself; the fact that all things were made on a basis of right; that justice is really desired by all intelligent beings; that opposition to it is against the nature of things; and that, whatever may happen in this hour or that, the years and the centuries are always pulling down the wrong and building up the right.

¶ The war made the Divine Providence credible to many who did not believe the good Heaven quite honest. Every man was an abolitionist by conviction, but did not believe that his neighbor was. The opinions of masses of men, which the tactics of primary caucuses and the proverbial timidity of trade had concealed, the war discovered; and it

was found, contrary to all popular belief, that the country was at heart abolitionist, and for the Union was ready to die.

¶ As cities of men are the first effects of civilization, and also instantly causes of more civilization, so armies, which are only wandering cities, generate a vast heat, and lift the spirit of the soldiers who compose them to the boiling point. The armies mustered in the North were as much missionaries to the mind of the country as they were carriers of material force, and had the vast advantage of carrying whither they marched a higher civilization. Of course, there are noble men everywhere, and there are such in the South; and the noble know the noble, wherever they meet; and we have all heard passages of generous and exceptional behavior exhibited by individuals there to our officers and men, during the war. But the common people, rich or poor, were the narrowest and most conceited of mankind, as arrogant as the negroes on the Gambia River; and, by the way, it looks as if the editors of the Southern press were in all times selected from this class. The invasion of Northern farmers, mechanics, engineers, tradesmen, lawyers and students did more than forty years of peace had done to educate the South. "This will be a slow business," writes our Concord captain home, "for we have to stop and civilize the people as we go along."

¶ It is an interesting part of the history, the manner in which this incongruous militia were made soldiers. That was done again on the Kansas plan. Our farmers went to Kansas as peaceable, God-fearing men as the members of our school committee here. But when the Border raids were let loose on their villages, these people, who turned pale at home if called to dress a cut finger, on witnessing the butchery done by the Missouri riders on women and babes, were so beside themselves with rage, that they became on the instant the bravest soldiers and the most determined avengers. And the first events of the war of the Rebellion gave the like training to the new recruits.

¶ All sorts of men went to the war,—the roughs, men who liked harsh play and violence, men for whom pleasure was not strong enough, but who wanted pain, and found sphere at last for their superabundant energy; then the adventurous type of New Englander, with his appetite for novelty and travel; the village politician, who could now verify his newspaper knowledge, see the South, and amass what a stock of adventures to retail hereafter at the fireside, or to the well-known companions on the Mill-dam; young men, also, of excellent education and polished manners, delicately brought up; manly farmers, skilful mechanics, young tradesmen, men hitherto of narrow opportunities of knowing the world, but well taught in the grammar-schools. But perhaps in every one of these classes were idealists, men who went from a religious duty. I have a note of a conversation that occurred in our first company, the morning before the battle of Bull Run. At a halt in the march, a few of our boys were sitting on a rail fence talking together whether it was right to sacrifice themselves. One of them said, "he had been thinking a good deal about it, last night, and he thought one was never too young to die for a principle." One of our later volunteers, on the day when he left home, in reply to my question, How can you be spared from your farm, now that your father is so ill? said: "I go because I shall always be sorry if I did not go when the country called me. I can go as well as another." One wrote to his father these words: "You may think it strange that I, who have always naturally rather shrunk from danger, should wish to enter the army; but there is a higher Power that tunes the hearts of men, and enables them to see their duty, and gives them courage to face the dangers with which those duties are attended." And the captain writes home of another of his men. "B—— comes from a sense of duty and love of country, and these are the soldiers you can depend upon."

¶ None of us can have forgotten how sharp a test to try our peaceful people

with, was the first call for troops. I doubt not many of our soldiers could repeat the confession of a youth whom I knew in the beginning of the war, who enlisted in New York, went to the field, and died early. Before his departure he confided to his sister that he was naturally a coward, but was determined that no one should ever find it out; that he had long trained himself by forcing himself, on the suspicion of any near danger, to go directly up to it, cost him what struggles it might. Yet it is from this temperament of sensibility that great heroes have been formed.

¶ Our first company was led by an officer who had grown up in this village from a boy. The older among us can well remember him at school, at play and at work, all the way up, the most amiable, sensible, unpretending of men; fair, blond, the rose lived long in his cheek; grave, but social, and one of the last men in this town you would have picked out for the rough dealing of war,—not a trace of fierceness, much less of recklessness, or of the devouring thirst for excitement; tender as a woman in his care for a cough or a chilblain in his men; had troches and arnica in his pocket for them. The army officers were welcome to their jest on him as too kind for a captain, and, later, as the colonel who got off his horse when he saw one of his men limp on the march, and told him to ride. But *he* knew that his men had found out, first that he was captain, then that he was colonel, and neither dared nor wished to disobey him. He was a man without conceit, who never fancied himself a philosopher or a saint; the most modest and amiable of men, engaged in common duties, but equal always to the occasion; and the war showed him still equal, however stern and terrible the occasion grew,—disclosed in him a strong good sense, great fertility of resource, the helping hand, and then the moral qualities of a commander,—a patience not to be tired out, a serious devotion to the cause of the country that never swerved, a hope that never failed. He was a Puritan in the army, with traits that remind one of John Brown,—an integrity incorruptible, and an ability that always rose to the need.

¶ You will remember that these colonels, captains and lieutenants, and the privates too, are domestic men, just wrenched away from their families and their business by this rally of all the manhood in the land. They have notes to pay at home; have farms, shops, factories, affairs of every kind to think of and write home about. Consider what sacrifice and havoc in business arrangements this war-blast made. They have to think carefully of every last resource at home on which their wives or mothers may fall back; upon the little account in the savings bank, the grass that can be sold, the old cow, or the heifer. These necessities make the topics of the ten thousand letters with which the mail-bags came loaded day by day. These letters play a great part in the war. The writing of letters made the Sunday in every camp:—meantime they are without the means of writing. After the first marches there is no letter-paper, there are no envelopes, no postage-stamps, for these were wetted into a solid mass in the rains and mud. Some of these letters are written on the back of old bills, some on brown paper, or strips of newspaper; written by firelight, making the short night shorter; written on the knee, in the mud, with pencil, six words at a time; or in the saddle, and have to stop because the horse will not stand still. But the words are proud and tender,—"Tell mother I will not disgrace her;" "tell her not to worry about me, for I know she would not have had me stay at home if she could as well as not." The letters of the captain are the dearest treasures of this town. Always devoted, sometimes anxious, sometimes full of joy at the deportment of his comrades, they contain the sincere praise of men whom I now see in this assembly. If Marshal Montluc's Memoirs are the Bible of soldiers, as Henry IV. of France said, Colonel Prescott might furnish the Book of Epistles.

¶ He writes, "You don't know how

one gets attached to a company by living with them and sleeping with them all the time. I know every man by heart. I know every man's weak spot,—who is shaky, and who is true blue." He never remits his care of the men, aiming to hold them to their good habits and to keep them cheerful. For the first point, he keeps up a constant acquaintance with them; urges their correspondence with their friends; writes news of them home, urging his own correspondent to visit their families and keep them informed about the men; encourages a temperance society which is formed in the camp. "I have not had a man drunk, or affected by liquor, since we came here." At one time he finds his company unfortunate in having fallen between two companies of quite another class,—"'t is profanity all the time; yet instead of a bad influence on our men, I think it works the other way,—it disgusts them."

THERE are people who can hardly read the names on yonder bronze tablet, the mist so gathers in their eyes. Three of the names are of sons of one family. Though the cannon volleys have a sound of funeral echoes, they can yet hear through them the benedictions of their country and mankind.

¶ One day he writes, "I expect to have a time, this forenoon, with the officer from West Point who drills us. He is very profane, and I will not stand it. If he does not stop it, I shall march my men right away when he is drilling them. There is a fine for officers swearing in the army, and I have too many young men that are not used to such talk. I told the colonel this morning I should do it, and shall,—don't care what the consequence is. This lieutenant seems to think that these men, who never saw a gun, can drill as well as he, who has been at West Point four years." At night he adds: "I told that officer from West Point, this morning, that he could not swear at my company as he did yesterday; told him I would not stand it anyway. I told him I had a good many young men in my company whose mothers asked me to look after them, and I should do so, and not allow them to hear such language, especially from an officer, whose duty it was to set them a better example. Told him I did not swear myself and would not allow him to. He looked at me as much as to say, *Do you know whom you are talking to?* and I looked at him as much as to say, *Yes, I do.* He looked rather ashamed, but went through the drill without an oath." So much for the care of their morals. His next point is to keep them cheerful. 'T is better than medicine. He has games of base-ball, and pitching quoits, and euchre, whilst part of the military discipline is sham fights.

¶ The best men heartily second him, and invent excellent means of their own. When, afterwards, five of these men were prisoners in the Parish Prison in New Orleans, they set themselves to use the time to the wisest advantage,—formed a debating-club, wrote a daily or weekly newspaper, called it "Stars and Stripes." It advertises "prayer-meeting at 7 o'clock, in cell No. 8, second floor," and their own printed record is a proud and affecting narrative.

¶ Whilst the regiment was encamped at Camp Andrew, near Alexandria, in June, 1861, marching orders came. Colonel Lawrence sent for eight wagons, but only three came. On these they loaded all the canvas of the tents, but took no tent-poles.

¶ "It looked very much like a severe thunder-storm," writes the captain, "and I knew the men would all have to sleep out of doors, unless we carried them. So I took six poles, and went to the colonel, and told him I had got the poles for two tents, which would cover twenty-four men, and unless he ordered

me not to carry them, I should do so. He said he had no objection, only thought they would be too much for me. We only had about twelve men [the rest of the company being, perhaps, on picket or other duty], and some of them have their heavy knapsacks and guns to carry, so could not carry any poles. We started and marched two miles without stopping to rest, not having had anything to eat, and being very hot and dry." At this time Captain Prescott was daily threatened with sickness, and suffered the more from this heat. "I told Lieutenant Bowers, this morning, that I could afford to be sick from bringing the tent-poles, for it saved the whole regiment from sleeping outdoors; for they would not have thought of it, if I had not taken mine. The major had tried to discourage me;—said, 'perhaps, if I carried them over, some other company would get them;'—I told him, perhaps he did not think I was smart." He had the satisfaction to see the whole regiment enjoying the protection of these tents.

As cities of men are the first effects of civilization, and also instantly causes of more civilization, so armies, which are only wandering cities, generate a vast heat, and lift the spirit of the soldiers who compose them to the boiling point.

¶ In the disastrous battle of Bull Run this company behaved well, and the regimental officers believed, what is now the general conviction of the country, that the misfortunes of the day were not so much owing to the fault of the troops as to the insufficiency of the combinations by the general officers. It happened, also, that the Fifth Massachusetts was almost unofficered. The colonel was, early in the day, disabled by a casualty; the lieutenant-colonel, the major and the adjutant were already transferred to new regiments, and their places were not yet filled. The three months of the enlistment expired a few days after the battle.

¶ In the fall of 1861, the old artillery company of this town was reorganized, and Captain Richard Barrett received a commission in March, 1862, from the state, as its commander. This company, chiefly recruited here, was later embodied in the Forty-seventh Regiment, Massachusetts Volunteers, enlisted as nine months' men, and sent to New Orleans, where they were employed in guard duty during their term of service. Captain Humphrey H. Buttrick, lieutenant in this regiment, as he had been already lieutenant in Captain Prescott's company in 1861, went out again in August, 1864, a captain in the Fifty-ninth Massachusetts, and saw hard service in the Ninth Corps, under General Burnside. The regiment being formed of veterans, and in fields requiring great activity and exposure, suffered extraordinary losses; Captain Buttrick and one other officer being the only officers in it who were neither killed, wounded nor captured. In August, 1862, on the new requisition for troops, when it was becoming difficult to meet the draft,—mainly through the personal example and influence of Mr. Sylvester Lovejoy, twelve men, including himself, were enlisted for three years, and, being soon after enrolled in the Fortieth Massachusetts, went to the war; and a very good account has been heard, not only of the regiment, but of the talents and virtues of these men.

¶ After the return of the three months' company to Concord, in 1861, Captain Prescott raised a new company of volunteers, and Captain Bowers another. Each of these companies included recruits from this town, and they formed part of the Thirty-second Regiment of Massachusetts Volunteers. Enlisting for

three years, and remaining to the end of the war, these troops saw every variety of hard service which the war offered, and, though suffering at first some disadvantage from change of commanders, and from severe losses, they grew at last, under the command of Colonel Prescott, to an excellent reputation, attested by the names of the thirty battles they were authorized to inscribe on their flag, and by the important position usually assigned them in the field.

¶ I have found many notes of their rough experience in the march and in the field. In McClellan's retreat in the Peninsula, in July, 1862, "it is all our men can do to draw their feet out of the mud. We marched one mile through mud, without exaggeration, one foot deep,—a good deal of the way over my boots, and with short rations; on one day nothing but liver, blackberries, and pennyroyal tea."—"At Fredericksburg we lay eleven hours in one spot without moving, except to rise and fire." The next note is, "cracker for a day and a half,—but all right." Another day, "had not left the ranks for thirty hours, and the nights were broken by frequent alarms. How would Concord people," he asks, "like to pass the night on the battle-field, and hear the dying crying for help, and not be able to go to them?" But the regiment did good service at Harrison's Landing, and at Antietam, under Colonel Parker; and at Fredericksburg, in December, Lieutenant-Colonel Prescott loudly expressed his satisfaction at his comrades, now and then particularizing names: "Bowers, Shepard and Lauriat are as brave as lions."

¶ At the battle of Gettysburg, in July, 1863, the brigade of which the Thirty-second Regiment formed a part, was in line of battle seventy-two hours, and suffered severely. Colonel Prescott's regiment went in with two hundred and ten men, nineteen officers. On the second of July they had to cross the famous wheatfield, under fire from the rebels in front and on both flanks. Seventy men were killed or wounded out of seven companies. Here Francis Butrick, whose manly beauty all of us remember, and Sergeant Appleton, an excellent soldier, were fatally wounded. The Colonel was hit by three bullets. "I feel," he writes, "I have much to be thankful for that my life is spared, although I would willingly die to have the regiment do as well as they have done. Our colors had several holes made, and were badly torn. One bullet hit the staff which the bearer had in his hand. The color-bearer is brave as a lion; he will go anywhere you say, and no questions asked; his name is Marshall Davis.' The Colonel took evident pleasure in the fact that he could account for all his men. There were so many killed, so many wounded,—but no missing. For that word "missing" was apt to mean skulking. Another incident: "A friend of Lieutenant Barrow complains that we did not treat his body with respect, inasmuch as we did not send it home. I think we were very fortunate to save it at all, for in ten minutes after he was killed the rebels occupied the ground, and we had to carry him and all our wounded nearly two miles in blankets. There was no place nearer than Baltimore where we could have got a coffin, and I suppose it was eighty miles there. We laid him in two double blankets, and then sent off a long distance and got boards off a barn to make the best coffin we could, and gave him burial."

¶ After Gettysburg, Colonel Prescott remarks that our regiment is highly complimented. When Colonel Gurney, of the Ninth, came to him the next day to tell him that "folks are just beginning to appreciate the Thirty-second Regiment: it always was a good regiment, and people are just beginning to find it out;" Colonel Prescott notes in his journal,—"Pity they have not found it out before it was all gone. We have a hundred and seventy-seven guns this morning."

¶ Let me add an extract from the official report of the brigade commander: "Word was sent by General Barnes, that, when we retired, we should fall back under cover of the woods. This

order was communicated to Colonel Prescott, whose regiment was then under the hottest fire. Understanding it to be a peremptory order to retire then, he replied, 'I don't want to retire; I am not ready to retire; I can hold this place;' and he made good his assertion. Being informed that he misunderstood the order, which was only to inform him how to retire when it became necessary, he was satisfied, and he and his command held their ground manfully." It was said that Colonel Prescott's reply, when reported, pleased the Acting-Brigadier-General Sweitzer mightily.

¶ After Gettysburg, the Thirty-second Regiment saw hard service at Rappahannock Station; and at Baltimore, in Virginia, where they were drawn up in battle order for ten days successively: crossing the Rapidan, and suffering from such extreme cold, a few days later, at Mine Run, that the men were compelled to break rank and run in circles to keep themselves from being frozen. On the third of December, they went into winter quarters.

¶ I must not follow the multiplied details that make the hard work of the next year. But the campaign in the Wilderness surpassed all their worst experience hitherto of the soldier's life. On the third of May, they crossed the Rapidan for the fifth time. On the twelfth, at Laurel Hill, the regiment had twenty-one killed and seventy-five wounded, including five officers. "The regiment has been in the front and centre since the battle begun, eight and a half days ago, and is now building breastworks on the Fredericksburg road. This has been the hardest fight the world ever knew. I think the loss of our army will be forty thousand. Every day, for the last eight days, there has been a terrible battle the whole length of the line. One day they drove us; but it has been regular bull-dog fighting." On the twenty-first, they had been, for seventeen days and nights, under arms without rest. On the twenty-third, they crossed the North Anna, and achieved a great success. On the thirtieth, we learn, "Our regiment has never been in the second line since we crossed the Rapidan, on the third." On the night of the thirtieth,—"The hardest day we ever had. We have been in the first line twenty-six days, and fighting every day but two; whilst your newspapers talk of the inactivity of the Army of the Potomac. If those writers could be here and fight all day, and sleep in the trenches, and be called up several times in the night by picket-firing, they would not call it inactive." June fourth is marked in the diary as "An awful day;—two hundred men lost to the command;" and not until the fifth of June comes at last a respite for a short space, during which the men drew shoes and socks, and the officers were able to send to the wagons and procure a change of clothes, for the first time in five weeks.

¶ But from these incessant labors there was now to be rest for one head,—the honored and beloved commander of the regiment. On the sixteenth of June, they crossed the James River, and marched to within three miles of Petersburg. Early in the morning of the eighteenth they went to the front, formed line of battle, and were ordered to take the Norfolk and Petersburg Railroad from the rebels. In this charge, Colonel George L. Prescott was mortally wounded. After driving the enemy from the railroad, crossing it, and climbing the farther bank to continue the charge, he was struck, in front of his command, by a musket-ball which entered his breast near the heart. He was carried off the field to the division hospital, and died on the following morning. On his death-bed, he received the needless assurances of his general that "he had done more than all his duty,"—needless to a conscience so faithful and unspotted. One of his townsmen and comrades, a sergeant in his regiment, writing to his own family, uses these words: "He was one of the few men who fight for principle. He did not fight for glory, honor, nor money, but because he thought it his duty. These are not my feelings only, but of the whole regiment."

¶ On the first of January, 1865, the Thirty-second Regiment made itself

comfortable in log huts, a mile south of our rear line of works before Petersburg. On the fourth of February, sudden orders came to move next morning at daylight. At Dabney's Mills, in a sharp fight, they lost seventy-four in killed, wounded and missing. Here Major Shepard was taken prisoner. The lines were held until the tenth, with more than usual suffering from snow and hail and intense cold, added to the annoyance of the artillery fire. On the first of April, the regiment connected with Sheridan's cavalry, near the Five Forks, and took an important part in that battle which opened Petersburg and Richmond, and forced the surrender of Lee. On the ninth, they marched in support of the cavalry, and were advancing in a grand charge, when the white flag of General Lee appeared. The brigade of which the Thirty-second Regiment formed part was detailed to receive the formal surrender of the rebel arms. The homeward march began on the thirteenth, and the regiment was mustered out in the field, at Washington, on the twenty-eighth of June, and arrived in Boston on the first of July.

¶ Fellow citizens: The obelisk records only the names of the dead. There is something partial in this distribution of honor. Those who went through those dreadful fields and returned not deserve much more than all the honor we can pay. But those also who went through the same fields, and returned alive, put just as much at hazard as those who died, and, in other countries, would wear distinctive badges of honor as long as they lived. I hope the disuse of such medals or badges in this country only signifies that everybody knows these men, and carries their deeds in such lively remembrance that they require no badge or reminder. I am sure I need not bespeak your gratitude to these fellow citizens and neighbors of ours. I hope they will be content with the laurels of one war.

¶ But let me, in behalf of this assembly, speak directly to you, our defenders, and say, that it is easy to see that if danger should ever threaten the homes which you guard, the knowledge of your presence will be a wall of fire for their protection. Brave men! you will hardly be called to see again fields as terrible as those you have already trampled with your victories.

¶ There are people who can hardly read the names on yonder bronze tablet, the mist so gathers in their eyes. Three of the names are of sons of one family. A gloom gathers on this assembly, composed as it is of kindred men and women, for, in many houses, the dearest and noblest is gone from their hearth-stone. Yet it is tinged with light from heaven. A duty so severe has been discharged, and with such immense results of good, lifting private sacrifice to the sublime, that, though the cannon volleys have a sound of funeral echoes, they can yet hear through them the benedictions of their country and mankind.

Appendix

IN the above Address I have been compelled to suppress more details of personal interest than I have used. But I do not like to omit the testimony to the character of the Commander of the Thirty-second Massachusetts Regiment, given in the following letter by one of his soldiers:—

Near Petersburg, Virginia,
June 20, 1864.

DEAR FATHER:

¶ With feelings of deep regret, I inform you that Colonel Prescott, our brave and lamented leader, is no more. He was shot through the body, near the heart, on the eighteenth day of June, and died the following morning. On the morning of the eighteenth, our division was not in line. Reveille was at an early hour, and before long we were moving to the front. Soon we passed the ground where the Ninth Corps drove the enemy from their fortified lines, and came upon and formed our line in rear of Crawford's Division. In front of us, and one mile distant, the Rebels' lines of

works could be seen. Between us and them, and in a deep gulley, was the Norfolk and Petersburg Railroad. Soon the order came for us to take the railroad from the enemy, whose advance then held it. Four regiments of our brigade were to head the charge; so the 32d Massachusetts, 62d, 91st and 155th Pennsylvania regiments, under command of Colonel Gregory, moved forward in good order, the enemy keeping up a steady fire all the time. All went well till we reached the road. The Rebels left when they saw us advance, and, when we reached the road, they were running away. But here our troubles began. The banks, on each side of the road, were about thirty feet high, and being stiff clay, were nearly perpendicular. We got down well enough, because we got started, and were rolled to the bottom, a confused pile of Yanks. Now to climb the other side! It was impossible to get up by climbing, for the side of it was like the side of a house. By dint of getting on each other's shoulders and making holes for our feet with bayonets, a few of us got up; reaching our guns down to the others, we all finally got over. Meanwhile, a storm of bullets was rained upon us. Through it all, Colonel Prescott was cool and collected, encouraging the men to do their best. After we were almost all across, he moved out in front of the line, and called the men out to him, saying, "Come on, men; form our line here." The color-bearer stepped towards him, when a bullet struck the Colonel, passed through him, and wounded the color-bearer, Sergeant Giles of Company G. Calmly the Colonel turned, and said, "I am wounded; some one help me off." A sergeant of Company B, and one of the 21st Pennsylvania, helped him off. This man told me, last night, all that the Colonel said, while going off. He was afraid we would be driven back, and wanted these men to stick by him. He said, "I die for my country." He seemed to be conscious that death was near to him, and said the wound was near his heart; wanted the sergeant of Company B to write to his family, and tell them all about him. He will write to Mrs. Prescott, probably; but if they do not hear from some one an account of his death, I wish you would show this to Mrs. Prescott. He died in the division hospital, night before last, and his remains will probably be sent to Concord. We lament his loss in the regiment very much. He was like a father to us,—always counselling us to be firm in the path of duty, and setting the example himself. I think a more moral man, or one more likely to enter the kingdom of heaven, cannot be found in the Army of the Potomac. No man ever heard him swear, or saw him use liquor, since we were in the service. I wish there was some way for the regiment to pay some tribute to his memory. But the folks at home must do this for the present. The Thirty-second Regiment has lost its leader, and calls on the people of Concord to console the afflicted family of the brave departed, by showing their esteem for him in some manner. He was one of the few men who fight for principle,—pure principle. He did not fight for glory, honor nor money but because he thought it his duty. These are not my feelings only, but of the whole regiment. I want you to show this to every one, so they can see what we thought of the Colonel, and how he died in front of his regiment. God bless and comfort his poor family. Perhaps people think soldiers have no feeling, but it is not so. We feel deep anxiety for the families of all our dear comrades.

CHARLES BARTLETT,

Sergeant Company G, 32d Mass. Vols.

WOMAN

AMONG those movements which seem to be, now and then, endemic in the public mind,—perhaps we should say, sporadic,—rather than the single inspiration of one mind, is that which has urged on society the benefits of action having for its object a benefit to the position of Woman. And none is more seriously interesting to every healthful and thoughtful mind.

¶ In that race which is now predominant over all the other races of men, it was a cherished belief that women had an oracular nature. They are more delicate than men,—delicate as iodine to light,—and thus more impressionable. They are the best index of the coming hour. I share this belief. I think their words are to be weighed; but it is their inconsiderate word,—according to the rule, "take their first advice, not the second:" as Coleridge was wont to apply to a lady for her judgment in questions of taste, and accept it; but when she added—"I think so, because —" "Pardon me, madam," he said, "leave me to find out the reasons for myself." In this sense, as more delicate mercuries of the imponderable and immaterial influences, what they say and think is the shadow of coming events. Their very dolls are indicative. Among our Norse ancestors, Frigga was worshipped as the goddess of women. "Weirdes all," said the Edda, "Frigga knoweth, though she telleth them never." That is to say, all wisdoms Woman knows; though she takes them for granted, and does not explain them as discoveries, like the understanding of man. Men remark figure: women always catch the expression. They inspire by a look, and pass with us not so much by what they say or do, as by their presence. They learn so fast and convey the result so fast as to outrun the logic of their slow brother and make his acquisitions poor. 'T is their mood and tone that is important. Does their mind misgive them, or are they firm and cheerful? 'T is a true report that things are going ill or well. And any remarkable opinion or movement shared by woman will be the first sign of revolution.

¶ Plato said, Women are the same as men in faculty, only less in degree. But the general voice of mankind has agreed that they have their own strength; that women are strong by sentiment; that the same mental height which their husbands attain by toil, they attain by sympathy with their husbands. Man is the will, and Woman the sentiment. In this ship of humanity, Will is the rudder, and Sentiment the sail: when Woman affects to steer, the rudder is only a masked sail. When women engage in any art or trade, it is usually as a resource, not as a primary object. The life of the affections is primary to them, so that there is usually no employment or career which they will not with their own applause and that of society quit for a suitable marriage. And they give entirely to their affections, set their whole fortune on the die, lose themselves eagerly in the glory of their husbands and children. Man stands astonished at a magnanimity he cannot pretend to. Mrs. Lucy Hutchinson, one of the heroines of the English Commonwealth, who wrote the life of her husband, the Governor of Nottingham, says, "If he esteemed her at a higher rate than she in herself could have deserved, he was the author of that virtue he doted on, while she only reflected his own glories upon him. All that she was, was *him*, while he was hers, and all that she is now, at best, but his pale shade." As for Plato's opinion, it is true that, up to recent times, in no art or science, nor in painting, poetry or music, have they produced a masterpiece. Till the new education and larger opportunities of very modern times, this position, with the fewest possible exceptions, has always been true. Sappho, to be sure, in the Olympic Games, gained

the crown over Pindar. But, in general, no mastery in either of the fine arts—which should, one would say, be the arts of women—has yet been obtained by them, equal to the mastery of men in the same. The part they play in education, in the care of the young and the tuition of older children, is their organic office in the world. So much sympathy as they have makes them inestimable as the mediators between those who have knowledge and those who want it: besides, their fine organization, their taste and love of details, makes the knowledge they give better in their hands.

¶ But there is an art which is better than painting, poetry, music, or architecture, — better than botany, geology, or any science; namely, Conversation. Wise, cultivated, genial conversation is the last flower of civilization and the best result which life has to offer us,—a cup for gods, which has no repentance. Conversation is our account of ourselves. All we have, all we can, all we know, is brought into play, and as the reproduction, in finer form, of all our havings.

¶ Women are, by this and their social influence, the civilizers of mankind. What is civilization? I answer, the power of good women. It was Burns's remark when he first came to Edinburgh that between the men of rustic life and the polite world he observed little difference; that in the former, though unpolished by fashion and unenlightened by science, he had found much observation and much intelligence; but a refined and accomplished woman was a being almost new to him, and of which he had formed a very inadequate idea. "I like women," said a clear-headed man of the world; "they are so finished." They finish society, manners, language. Form and ceremony are their realm. They embellish trifles. All these ceremonies that hedge our life around are not to be despised, and when we have become habituated to them, cannot be dispensed with. No woman can despise them with impunity. Their genius delights in ceremonies, in forms, in decorating life with manners, with properties, order and grace. They are, in their nature, more relative; the circumstance must always be fit; out of place they lose half their weight, out of place they are disfranchised. Position, Wren said, is essential to the perfecting of beauty;—a fine building is lost in a dark lane; a statue should stand in the air; much more true is it of woman.

WHEN women engage in any art or trade, it is usually as a resource, not as a primary object. The life of the affections is primary to them, so that there is usually no employment or career which they will not with their own applause and that of society quit for a suitable marriage.

¶ We commonly say that easy circumstances seem somehow necessary to the finish of the female character: but then it is to be remembered that they create these with all their might. They are always making that civilization which they require; that state of art, of decoration, that ornamental life in which they best appear.

¶ The spiritual force of man is as much shown in taste, in his fancy and imagination,—attaching deep meanings to things and to arbitrary inventions of no real value,—as in his perception of truth. He is as much raised above the beast by this creative faculty as by any other. The horse and ox use no delays; they run to the river when thirsty, to the corn when hungry, and say no thanks, but fight down whatever opposes their appetite. But man invents and adorns all he does with delays and degrees, paints it all over with forms, to please himself better; he invented majesty and the etiquette of courts and

drawing-rooms; architecture, curtains, dress, all luxuries and adornments, and the elegance of privacy, to increase the joys of society. He invented marriage; and surrounded by religion, by comeliness, by all manner of dignities and renunciations, the union of the sexes.

¶ And how should we better measure the gulf between the best intercourse of men in old Athens, in London, or in our American capitals,—between this and the hedgehog existence of diggers of worms, and the eaters of clay and offal,—than by signalizing just this department of taste or comeliness? Herein woman is the prime genius and ordainer. There is no grace that is taught by the dancing-master, no style adopted into the etiquette of courts, but was first the whim and the mere action of some brilliant woman, who charmed beholders by this new expression, and made it remembered and copied. And I think they should magnify their ritual of manners. Society, conversation, decorum, flowers, dances, colors, forms, are their homes and attendants. They should be found in fit surroundings—with fair approaches, with agreeable architecture, and with all advantages which the means of man collect:

"The far-fetched diamond finds its home
Flashing and smouldering in her hair.
For her the seas their pearls reveal,
Art and strange lands her pomp supply
With purple, chrome and cochineal,
Ochre and lapis lazuli.
The worm its golden woof presents.
Whatever runs, flies, dives or delves
All doff for her their ornaments,
Which suit her better than themselves."

¶ There is no gift of Nature without some drawback. So, to women, this exquisite structure could not exist without its own penalty. More vulnerable, more infirm, more mortal than men, they could not be such excellent artists in this element of fancy if they did not lend and give themselves to it. They are poets who believe their own poetry. They emit from their pores a colored atmosphere, one would say, wave upon wave of rosy light, in which they walk evermore, and see all objects through this warm-tinted mist that envelops them.

¶ But the starry crown of woman is in the power of her affection and sentiment, and the infinite enlargements to which they lead. Beautiful is the passion of love, painter and adorner of youth and early life: but who suspects, in its blushes and tremors, what tragedies, heroisms and immortalities are beyond it? The passion, with all its grace and poetry, is profane to that which follows it. All these affections are only introductory to that which is beyond, and to that which is sublime.

¶ We men have no right to say it, but the omnipotence of Eve is in humility. The instincts of mankind have drawn the Virgin Mother—

"Created beings all in lowliness
Surpassing, as in height above them all."

¶ This is the Divine Person whom Dante and Milton saw in vision. This is the victory of Griselda, her supreme humility. And it is when love has reached this height that all our pretty rhetoric begins to have meaning. When we see that, it adds to the soul a new soul, it is honey in the mouth, music in the ear and balsam in the heart.

"Far have I clambered in my mind,
But nought so great as Love I find.
What is thy tent, where dost thou dwell?
'My mansion is humility,
Heaven's vastest capability.'
The further it doth downward tend,
The higher up it doth ascend."

¶ The first thing men think of, when they love, is to exhibit their usefulness and advantages to the object of their affection. Women make light of these, asking only love. They wish it to be an exchange of nobleness.

¶ There is much in their nature, much in their social position which gives them a certain power of divination. And women know, at first sight, the characters of those with whom they converse. There is much that tends to give them a religious height which men do not attain. Their sequestration from affairs and from the injury to the moral sense which affairs often inflict, aids

this. And in every remarkable religious development in the world, women have taken a leading part. It is very curious that in the East, where Woman occupies, nationally, a lower sphere, where the laws resist the education and emancipation of women,—in the Mohammedan faith, Woman yet occupies the same leading position, as a prophetess, that she has among the ancient Greeks, or among the Hebrews, or among the Saxons. This power, this religious character, is everywhere to be remarked in them.

¶ The action of society is progressive. In barbarous society the position of women is always low—in the Eastern nations lower than in the West. "When a daughter is born," say the Shiking, the old Sacred Book of China, "she sleeps on the ground, she is clothed with a wrapper, she plays with a tile; she is incapable of evil or of good." And something like that position, in all low society, is the position of woman; because, as before remarked, she is herself its civilizer. With the advancements of society, the position and influence of woman bring her strength or her faults into light. In modern times, three or four conspicuous instrumentalities may be marked. After the deification of Woman in the Catholic Church, in the sixteenth or seventeenth century,—when her religious nature gave her, of course, new importance,—the Quakers have the honor of having first established, in their discipline, the equality in the sexes. It is even more perfect in the later sect of the Shakers, where no business is broached or counselled without the intervention of one elder and one elderess.

¶ A second epoch for Woman was in France,—entirely civil; the change of sentiment from a rude to a polite character, in the age of Louis XIV,—commonly dated from the building of the Hôtel de Rambouillet. I think another important step was made by the doctrine of Swedenborg, a sublime genius who gave a scientific exposition of the part played severally by man and woman in the world, and showed the difference of sex to run through nature and through thought. Of all Christian sects this is at this moment the most vital and aggressive.

¶ Another step was the effect of the action of the age in the antagonism to Slavery. It was easy to enlist Woman in this; it was impossible not to enlist her. But that Cause turned out to be a great scholar. He was a terrible metaphysician. He was a jurist, a poet, a divine. Was never a University of Oxford or Göttingen that made such students. It took a man from the plough and made him acute, eloquent, and wise, to the silencing of the doctors. There was nothing it did not pry into, no right it did not explore, no wrong it did not expose. And it has, among its other effects, given Woman a feeling of public duty and an added self-respect.

¶ One truth leads in another by the hand; one right is an accession of strength to take more. And the times are marked by the new attitude of Woman; urging, by argument and by association, her rights of all kinds,—in short, to one half of the world;—as the right to education, to avenues of employment, to equal rights of property, to equal rights in marriage, to the exercise of the professions and of suffrage.

¶ Of course, this conspicuousness had its inconveniences. But it is cheap wit that has been spent on this subject; from Aristophanes, in whose comedies I confess my dulness to find good joke, to Rabelais, in whom it is monstrous exaggeration of temperament, and not borne out by anything in nature,—down to English Comedy, and, in our day, to Tennyson, and the American newspapers. In all, the body of the joke is one, namely, to charge women with temperament; to describe them as victims of temperament; and is identical with Mahomet's opinion that women have not a sufficient moral or intellectual force to control the perturbations of their physical structure. These were all drawings of morbid anatomy, and such satire as might be written on the tenants of a hospital or on an asylum for idiots. Of course it

would be easy for women to retaliate in kind, by painting men from the dogs and gorillas that have worn our shape. That they have not, is an eulogy on their taste and self-respect. The good easy world took the joke which it liked. There is always the want of thought; there is always credulity. There are plenty of people who believe women to be incapable of anything but to cook, incapable of interest in affairs. There are plenty of people who believe that the world is governed by men of dark complexions, that affairs are only directed by such, and do not see the use of contemplative men, or how ignoble would be the world that wanted them. And so without the affection of women.

¶ But for the general charge: no doubt it is well founded. They are victims of the finer temperament. They have tears, and gayeties, and faintings, and glooms and devotion to trifles. Nature's end, of maternity for twenty years, was of so supreme importance that it was to be secured at all events, even to the sacrifice of the highest beauty. They are more personal. Men taunt them that, whatever they do, say, read or write, they are thinking of themselves and their set. Men are not to the same degree temperamented, for there are multitudes of men who live to objects quite out of them, as to politics, to trade, to letters or an art, unhindered by any influence of constitution.

¶ The answer that lies, silent or spoken, in the minds of well-meaning persons, to the new claims, is this: that though their mathematical justice is not to be denied, yet the best women do not wish these things; they are asked for by people who intellectually seek them, but who have not the support or sympathy of the truest woman; and that, if the laws and customs were modified in the manner proposed, it would embarrass and pain gentle and lovely persons with duties which they would find irksome and distasteful. Very likely. Providence is always surprising us with new and unlikely instruments. But perhaps it is because these people have been deprived of education, fine companions, opportunities, such as they wished,—because they feel the same rudeness and disadvantage which offends you—that they have been stung to say, "It is too late for us to be polished and fashioned into beauty, but, at least, we will see that the whole race of women shall not suffer as we have suffered."

¶ They have an unquestionable right to their own property. And if a woman demand votes, offices and political equality with men, as among the Shakers an Elder and Elderess are of equal power,—and among the Quakers,—it must not be refused. It is very cheap wit that finds it so droll that a woman should vote. Educate and refine society to the highest point,—bring together a cultivated society of both sexes, in a drawing-room, and consult and decide by voices on a question of taste or on a question of right, and is there any absurdity or any practical difficulty in obtaining their authentic opinions? If not, then there need be none in a hundred companies, if you educate them and accustom them to judge. And, for the effect of it, I can say, for one, that all my points would sooner be carried in the State if women voted. On the questions that are important,—whether the government shall be in one person, or whether representative, or whether democratic; whether men shall be holden in bondage, or shall be roasted alive and eaten, as in Typee, or shall be hunted with bloodhounds, as in this country; whether men shall be hanged for stealing, or hanged at all; whether the unlimited sale of cheap liquors shall be allowed;—they would give, I suppose, as intelligent a vote as the voters of Boston or New York.

¶ We may ask, to be sure,—Why need you vote? If new power is here, of a character which solves old tough questions, which puts me and all the rest in the wrong, tries and condemns our religion, customs, laws, and opens new careers to our young receptive men and women, you can well leave voting to the old dead people. Those whom you

teach, and those whom you half teach, will fast enough make themselves considered and strong with their new insight, and votes will follow from all the dull.

¶ The objection to their voting is the same as is urged, in the lobbies of legislatures, against clergymen who take an active part in politics;—that if they are good clergymen they are unacquainted with the expediencies of politics, and if they become good politicians they are worse clergymen. So of women, that they cannot enter this arena without being contaminated and unsexed.

¶ Here are two or three objections: first, a want of practical wisdom; second, a too purely ideal view; and, third, danger of contamination. For their want of intimate knowledge of affairs, I do not think this ought to disqualify them from voting at any town-meeting which I ever attended. I could heartily wish the objection were sound. But if any man will take the trouble to see how our people vote,—how many gentlemen are willing to take on themselves the trouble of thinking and determining for you, and, standing at the door of the polls, give every innocent citizen his ticket as he comes in, informing him that this is the vote of his party; and how the innocent citizen, without further demur, goes and drops it in the ballot-box,—I cannot but think he will agree that most women might vote as wisely.

¶ For the other point, of their not knowing the world, and aiming at abstract right without allowance for circumstances,—that is not a disqualification, but a qualification. Human society is made up of partialities. Each citizen has an interest and a view of his own, which, if followed out to the extreme, would leave no room for any other citizen. One man is timid and another rash; one would change nothing, and the other is pleased with nothing; one wishes schools, another armies, one gunboats, another public gardens. Bring all these biases together and something is done in favor of them all.

WOMEN are the civilizers of mankind. What is civilization? I answer, the power of good women.

¶ Every one is a half vote, but the next elector behind him brings the other or corresponding half in his hand: a reasonable result is had. Now there is no lack, I am sure, of the expediency, or of the interests of trade or of imperative class interests being neglected. There is no lack of votes representing the physical wants; and if in your city the uneducated emigrant vote numbers thousands, representing a brutal ignorance and mere animal wants, it is to be corrected by an educated and religious vote, representing the wants and desires of honest and refined persons. If the wants, the passions, the vices, are allowed a full vote through the hands of a half-brutal intemperate population, I think it but fair that the virtues, the aspirations should be allowed a full vote, as an offset, through the purest part of the people.

¶ As for the unsexing and contamination,—that only accuses our existing politics, shows how barbarous we are, —that our policies are so crooked, made up of things not to be spoken, to be understood only by wink and nudge; this man to be coaxed, that man to be bought, and that other to be duped. It is easy to see that there is contamination enough, but it rots the men now, and fills the air with stench. Come out of that: it is like a dance-cellar. The fairest names in this country in litera-

ture, in law, have gone into Congress and come out dishonored. And when I read the list of men of intellect, of refined pursuits, giants in law, or eminent scholars, or of social distinction, leading men of wealth and enterprise in the commercial community, and see what they have voted for and suffered to be voted for, I think no community was ever so politely and elegantly betrayed.

¶ I do not think it yet appears that women wish this equal share in public affairs. But it is they and not we that are to determine it. Let the laws be purged of every barbarous remainder, every barbarous impediment to women. Let the public donations for education be equally shared by them, let them enter a school as freely as a church, let them have and hold and give their property as men do theirs;—and in a few years it will easily appear whether they wish a voice in making the laws that are to govern them. If you do refuse them a vote, you will also refuse to tax them, —according to our Teutonic principle, No representation, no tax.

¶ All events of history are to be regarded as growths and offshoots of the expanding mind of the race, and this appearance of new opinions, their currency and force in many minds, is itself the wonderful fact. For whatever is popular is important, shows the spontaneous sense of the hour. The aspiration of this century will be the code of the next. It holds of high and distant causes, of the same influences that make the sun and moon. When new opinions appear, they will be entertained and respected, by every fair mind, according to their reasonableness, and not according to their convenience, or their fitness to shock our customs. But let us deal with them greatly; let them make their way by the upper road, and not by the way of manufacturing public opinion, which lapses continually into expediency, and makes charlatans. All that is spontaneous is irresistible, and forever it is individual force that interests.

I need not repeat to you—your own solitude will suggest it—that a masculine woman is not strong, but a lady is. The loneliest thought, the purest prayer, is rushing to be the history of a thousand years.

¶ Let us have the true woman, the adorner, the hospitable, the religious heart, and no lawyer need be called in to write stipulations, the cunning clauses of provision, the strong investitures;—for woman moulds the lawgiver and writes the law. But I ought to say, I think it impossible to separate the interests and education of the sexes. Improve and refine the men, and you do the same by the women, whether you will or no. Every woman being the wife or the daughter of a man,—wife, daughter, sister, mother, of a man, she can never be very far from his ear, never not of his counsel, if she has really something to urge that is good in itself and agreeable to nature. Slavery it is that makes slavery; freedom, freedom. The slavery of women happened when the men were slaves of kings. The melioration of manners brought their melioration of course. It could not be otherwise, and hence the new desire of better laws. For there are always a certain number of passionately loving fathers, brothers, husbands and sons who put their might into the endeavor to make a daughter, a wife, or a mother happy in the way that suits best. Woman should find in man her guardian. Silently she looks for that, and when she finds that he is not, as she instantly does, she betakes her to her own defences, and does the best she can. But when he is her guardian, fulfilled with all nobleness, knows and accepts his duties as her brother, all goes well for both.

¶ The new movement is only a tide shared by the spirits of man and woman; and you may proceed in the faith that whatever the woman's heart is prompted to desire, the man's mind is simultaneously prompted to accomplish.

THE FORTUNE OF THE REPUBLIC

IT is a rule that holds in economy as well as in hydraulics that you must have a source higher than your tap. The mills, the shops, the theatre and the caucus, the college and the church, have all found out this secret. The sailors sail by chronometers that do not lose two or three seconds in a year, ever since Newton explained to Parliament that the way to improve navigation was to get good watches, and to offer public premiums for a better time-keeper than any then in use. The manufacturers rely on turbines of hydraulic perfection; the carpet-mill, on mordants and dyes which exhaust the skill of the chemist; the calico print, on designers of genius who draw the wages of artists, not of artisans. Wedgwood, the eminent potter, bravely took the sculptor Flaxman to counsel, who said, "Send to Italy, search the museums for the forms of old Etruscan vases, urns, waterpots, domestic and sacrificial vessels of all kinds." They built great works and called their manufacturing village Etruria. Flaxman, with his Greek taste, selected and combined the loveliest forms, which were executed in English clay; sent boxes of these as gifts to every court of Europe, and formed the taste of the world. It was a renaissance of the breakfast-table and china-closet. The brave manufacturers made their fortune. The jewellers imitated the revived models in silver and gold.

¶ The theatre avails itself of the best talent of poet, of painter, and of amateur of taste, to make the *ensemble* of dramatic effect. The marine insurance office has its mathematical counsellor to settle averages; the life-assurance, its table of annuities. The wine-merchant has his analyst and taster, the more exquisite the better. He has also, I fear, his debts to the chemist as well as to the vineyard.

OUR modern wealth stands on a few staples. What is cotton? One plant out of some two hundred thousand known to the botanist, vastly the larger part of which are reckoned weeds. What is a weed? A plant whose virtues have not yet been discovered.

¶ Our modern wealth stands on a few staples, and the interest nations took in our war was exasperated by the importance of the cotton trade. And what is cotton? One plant out of some two hundred thousand known to the botanist, vastly the larger part of which are reckoned weeds. What is a weed? A plant whose virtues have not yet been discovered, — every one of the two hundred thousand probably yet to be of utility in the arts. As Bacchus of the vine, Ceres of the wheat, as Arkwright and Whitney were the demi-gods of cotton, so prolific Time will yet bring an inventor to every plant. There is not a property in Nature but a mind is born to seek and find it. For it is not the plants or the animals, innumerable as they are, nor the whole magazine of material nature that can give the sum of power, but the infinite applicability of these things in the hands of thinking man, every new application being equivalent to a new material.

¶ Our sleepy civilization, ever since Roger Bacon and Monk Schwartz invented gunpowder, has built its whole art of war, all fortification by land and sea, all drill and military education, on that one compound,—all is an extension of a gun-barrel,—and is very scornful about bows and arrows, and reckons

Greeks and Romans and Middle Ages little better than Indians and bow-and-arrow times. As if the earth, water, gases, lightning and caloric had not a million energies, the discovery of any one of which could change the art of war again, and put an end to war by the exterminating forces man can apply.

¶ Now, if this is true in all the useful and in the fine arts, that the direction must be drawn from a superior source or there will be no good work, does it hold less in our social and civil life?

¶ In our popular politics you may note that each aspirant who rises above the crowd, however at first making his obedient apprenticeship in party tactics, if he have sagacity, soon learns that it is by no means by obeying the vulgar weathercock of his party, the resentments, the fears and whims of it, that real power is gained, but that he must often face and resist the party, and abide by his resistance, and put them in fear; that the only title to their permanent respect, and to a larger following, is to see for himself what is the real public interest, and to stand for that;—that is a principle, and all the cheering and hissing of the crowd must by and by accommodate itself to it. Our times easily afford you very good examples.

¶ The law of water and all fluids is true of wit. Prince Metternich said, "Revolutions begin in the best heads and run steadily down to the populace." It is a very old observation; not truer because Metternich said it, and not less true.

¶ There have been revolutions which were not in the interest of feudalism and barbarism, but in that of society. And these are distinguished not by the numbers of the combatants nor the numbers of the slain, but by the motive. No interest now attaches to the wars of York and Lancaster, to the wars of German, French and Spanish emperors, which were only dynastic wars, but to those in which a principle was involved. These are read with passionate interest and never lose their pathos by time. When the cannon is aimed by ideas, when men with religious convictions are behind it, when men die for what they live for, and the mainspring that works daily urges them to hazard all, then the cannon articulates its explosions with the voice of a man, then the rifle seconds the cannon and the fowling-piece the rifle, and the women make the cartridges, and all shoot at one mark; then gods join in the combat; then poets are born, and the better code of laws at last records the victory.

¶ Now the culmination of these triumphs of humanity—and which did virtually include the extinction of slavery—is the planting of America.

¶ At every moment some one country more than any other represents the sentiment and the future of mankind. None will doubt that America occupies this place in the opinion of nations, as is proved by the fact of the vast immigration into this country from all the nations of Western and Central Europe. And when the adventurers have planted themselves and looked about, they send back all the money they can spare to bring their friends.

¶ Meantime they find this country just passing through a great crisis in its history, as necessary as lactation or dentition or puberty to the human individual. We are in these days settling for ourselves and our descendants questions which, as they shall be determined in one way or the other, will make the peace and prosperity or the calamity of the next ages. The questions of Education, of Society, of Labor, the direction of talent, of character, the nature and habits of the American, may well occupy us, and more the question of Religion.

¶ The new conditions of mankind in America are really favorable to progress, the removal of absurd restrictions and antique inequalities. The mind is always better the more it is used, and here it is kept in practice. The humblest is daily challenged to give his opinion on practical questions, and while civil and social freedom exists, nonsense even has a favorable effect. Cant is good to provoke common sense. . . . The trance-

mediums, the rebel paradoxes, exasperate the common sense. The wilder the paradox, the more sure is Punch to put it in the pillory.

¶ The lodging the power in the people, as in republican forms, has the effect of holding things closer to common sense; for a court or an aristocracy, which must always be a small minority, can more easily run into follies than a republic, which has too many observers —each with a vote in his hand—to allow its head to be turned by any kind of nonsense: since hunger, thirst, cold, the cries of children and debt are always holding the masses hard to the essential duties.

¶ One hundred years ago the American people attempted to carry out the bill of political rights to an almost ideal perfection. They have made great strides in that direction since. They are now proceeding, instructed by their success and by their many failures, to carry out, not the bill of rights, but the bill of human duties.

¶ And look what revolution that attempt involves. Hitherto government has been that of the single person or of the aristocracy. In this country the attempt to resist these elements, it is asserted, must throw us into the government not quite of mobs, but in practice of an inferior class of professional politicians, who by means of newspapers and caucuses really thrust their unworthy minority into the place of the old aristocracy on the one side, and of the good, industrious, well-taught but unambitious population on the other, win the posts of power and give their direction to affairs. Hence liberal congresses and legislatures ordain, to the surprise of the people, equivocal, interested and vicious measures. The men themselves are suspected and charged with lobbying and being lobbied. No measure is attempted for itself, but the opinion of the people is courted in the first place, and the measures are perfunctorily carried through as secondary. We do not choose our own candidate, no, nor any other man's first choice,—but only the available candidate, whom, perhaps, no man loves. We do not speak what we think, but grope after the practicable and available. Instead of character, there is a studious exclusion of character. The people are feared and flattered. They are not reprimanded. The country is governed in bar-rooms, and in the mind of bar-rooms. The low can best win the low, and each aspirant for power vies with his rival which can stoop lowest, and depart widest from himself.

¶ The partisan on moral, even on religious questions, will choose a proven rogue who can answer the tests, over an honest, affectionate, noble gentleman; the partisan ceasing to be a man that he may be a sectarian.

¶ The spirit of our political economy is low and degrading. The precious metals are not so precious as they are esteemed. Man exists for his own sake, and not to add a laborer to the state. The spirit of our political action, for the most part, considers nothing less than the sacredness of man. Party sacrifices man to the measure.

¶ We have seen the great party of property and education in the country drivelling and huckstering away, for views of party fear or advantage, every principle of humanity and the dearest hopes of mankind; the trustees of power only energetic when mischief could be done, imbecile as corpses when evil was to be prevented.

¶ Our great men succumb so far to the forms of the day as to peril their integrity for the sake of adding to the weight of their personal character the authority of office, or making a real government titular. Our politics are full of adventurers, who having by education and social innocence a good repute in the state, break away from the law of honesty and think they can afford to join the devil's party. 'T is odious, these offenders in high life. You rally to the support of old charities and the cause of literature, and there, to be sure, are these brazen faces. In this innocence you are puzzled how to meet them; must shake hands with them, under protest. We feel toward them as the

minister about the Cape Cod farm,—in the old time when the minister was still invited, in the spring, to make a prayer for the blessing of a piece of land,—the good pastor being brought to the spot, stopped short: "No, this land does not want a prayer, this land wants manure."

"'T is virtue which they want, and wanting it,
Honor no garment to their backs can fit."

¶ Parties keep the old names, but exhibit a surprising fugacity in creeping out of one snake-skin into another of equal ignominy and lubricity, and the grasshopper on the turret of Faneuil Hall gives a proper hint of the men below.

¶ Everything yields. The very glaciers are viscous, or relegate into conformity, and the stiffest patriots falter and compromise; so that *will* cannot be depended on to save us.

¶ How rare are acts of will! We are all living according to custom; we do as other people do, and shrink from an act of our own. Every such act makes a man famous, and we can all count the few cases—half a dozen in our time—when a public man ventured to act as he thought without waiting for orders or for public opinion. John Quincy Adams was a man of an audacious independence that always kept the public curiosity alive in regard to what he might do. None could predict his word, and a whole congress could not gainsay it when it was spoken. General Jackson was a man of will, and his phrase on one memorable occasion, "I will take the responsibility," is a proverb ever since.

¶ The American marches with a careless swagger to the height of power, very heedless of his own liberty or of other peoples', in his reckless confidence that he can have all he wants, risking all the prized charters of the human race, bought with battles and revolutions and religion, gambling them all away for a paltry selfish gain.

¶ He sits secure in the possession of his vast domain, rich beyond all experience in resources, sees its inevitable force unlocking itself in elemental order day by day, year by year; looks from his coal-fields, his wheat-bearing prairies, his gold-mines, to his two oceans on either side, and feels the security that there can be no famine in a country reaching through so many latitudes, no want that cannot be supplied, no danger from any excess of importation of art or learning into a country of such native strength, such immense digestive power.

¶ In proportion to the personal ability of each man, he feels the invitation and career which the country opens to him. He is easily fed with wheat and game, with Ohio wine, but his brain is also pampered by finer draughts, by political power and by the power in the railroad board, in the mills, or the banks. This elevates his spirits, and gives, of course, an easy self-reliance that makes him self-willed and unscrupulous.

¶ I think this levity is a reaction on the people from the extraordinary advantages and invitations of their condition. When we are most disturbed by their rash and immoral voting, it is not malignity, but recklessness. They are careless of politics, because they do not entertain the possibility of being seriously caught in meshes of legislation. They feel strong and irresistible. They believe that what they have enacted they can repeal if they do not like it. But one may run a risk once too often. They stay away from the polls, saying that one vote can do no good! Or they take another step, and say "One vote can do no harm!" and vote for something which they do not approve, because their party or set votes for it. Of course this puts them in the power of any party having a steady interest to promote which does not conflict manifestly with the pecuniary interest of the voters. But if they should come to be interested in themselves and in their career, they would no more stay away from the election than from their own counting-room or the house of their friend.

¶ The people are right-minded enough on ethical questions, but they must pay their debts, and must have the means of living well, and not pinching. So it is

useless to rely on them to go to a meeting, or to give a vote, if any check from this must-have-the-money side arises. If a customer looks grave at their newspaper, or damns their member of Congress, they take another newspaper, and vote for another man. They must have money, for a certain style of living fast becomes necessary; they must take wine at the hotel, first, for the look of it, and second, for the purpose of sending the bottle to two or three gentlemen at the table; and presently because they have got the taste, and do not feel that they have dined without it.

¶ The record of the election now and then alarms people by the all but unanimous choice of a rogue and a brawler. But how was it done? What lawless mob burst into the polls and threw in these hundreds of ballots in defiance of the magistrates? This was done by the very men you know,—the mildest, most sensible, best-natured people. The only account of this is, that they have been scared or warped into some association in their mind of the candidate with the interest of their trade or of their property.

¶ Whilst each cabal urges its candidate, and at last brings, with cheers and street demonstrations, men whose names are a knell to all hope of progress, the good and wise are hidden in their active retirements, and are quite out of question.

"These we must join to wake, for these are of the strain
That justice dare defend, and will the age maintain."

¶ Yet we know, all over this country, men of integrity, capable of action and of affairs, with the deepest sympathy in all that concerns the public, mortified by the national disgrace, and quite capable of any sacrifice except of their honor.

¶ Faults in the working appear in our system, as in all, but they suggest their own remedies. After every practical mistake out of which any disaster grows, the people wake and correct it with energy. And any disturbances in politics, in civil or foreign wars, sober them, and instantly show more virtue and conviction in the popular vote. In each new threat of faction the ballot has been, beyond expectation, right and decisive.

HOW rare are acts of will! We are all living according to custom; we do as other people do, and shrink from an act of our own. Every such act makes a man famous, and we can all count the few cases—half a dozen in our time—when a public man ventured to act as he thought without waiting for orders or for public opinion.

¶ It is ever an inspiration, God only knows whence; a sudden, undated perception of eternal right coming into and correcting things that were wrong; a perception that passes through thousands as readily as through one.

¶ The gracious lesson taught by science to this country is that the history of Nature from first to last is incessant advance from less to more, from rude to finer organization, the globe of matter thus conspiring with the principle of undying hope in man. Nature works in immense time, and spends individuals and races prodigally to prepare new individuals and races. The lower kinds are one after one extinguished; the higher forms come in. The history of civilization, or the refining of certain races to wonderful power of performance, is analogous; but the best civilization yet is only valuable as a ground of hope.

¶ Ours is the country of poor men. Here is practical democracy; here is the human race poured out over the continent to do itself justice; all mankind in its shirt-sleeves; not grimacing like poor rich men in cities, pretending to be rich, but unmistakably taking off its coat to hard work, when labor is sure to pay. This through all the country. For really,

though you see wealth in the capitals, it is only a sprinkling of rich men in the cities and at sparse points; the bulk of the population is poor. In Maine, nearly every man is a lumberer. In Massachusetts, every twelfth man is a shoemaker, and the rest, millers, farmers, sailors, fishermen.

¶ Well, the result is, instead of the doleful experience of the European economist, who tells us, "In almost all countries the condition of the great body of the people is poor and miserable," here that same great body has arrived at a sloven plenty,—ham and corn-cakes, tight roof and coals enough have been attained; an unbuttoned comfort, not clean, not thoughtful, far from polished, without dignity in his repose; the man awkward and restless if he have not something to do, but honest and kind for the most part, understanding his own rights and stiff to maintain them, and disposed to give his children a better education than he received.

¶ The steady improvement of the public schools in the cities and the country enables the farmer or laborer to secure a precious primary education. It is rare to find a born American who cannot read and write. The facility with which clubs are formed by young men for discussion of social, political and intellectual topics secures the notoriety of the questions.

¶ Our institutions, of which the town is the unit, are all educational, for responsibility educates fast. The town-meeting is, after the high-school, a higher school. The legislature, to which every good farmer goes once on trial, is a superior academy.

¶ The result appears in the power of invention, the freedom of thinking, in the readiness for reforms, eagerness for novelty, even for all the follies of false science; in the antipathy to secret societies, in the predominance of the democratic party in the politics of the Union, and in the voice of the public even when irregular and vicious,—the voice of mobs, the voice of lynch law, —because it is thought to be, on the whole, the verdict, though badly spoken, of the greatest number.

¶ All this forwardness and self-reliance, cover self-government; proceed on the belief that as the people have made a government they can make another; that their union and law are not in their memory, but in their blood and condition. If they unmake a law, they can easily make a new one. In Mr. Webster's imagination the American Union was a huge Prince Rupert's drop, which will snap into atoms if so much as the smallest end be shivered off. Now the fact is quite different from this. The people are loyal, law-abiding. They prefer order, and have no taste for misrule and uproar.

¶ America was opened after the feudal mischief was spent, and so the people made a good start. We began well. No inquisition here, no kings, no nobles, no dominant church. Here heresy has lost its terrors. We have eight or ten religions in every large town, and the most that comes of it is a degree or two on the thermometer of fashion; a pew in a particular church gives an easier entrance to the subscription ball.

¶ We began with freedom, and are defended from shocks now for a century by the facility with which through popular assemblies every necessary measure of reform can instantly be carried. A congress is a standing insurrection, and escapes the violence of accumulated grievance. As the globe keeps its identity by perpetual change, so our civil system, by perpetual appeal to the people and acceptance of its reforms.

¶ The government is acquainted with the opinions of all classes, knows the leading men in the middle class, knows the leaders of the humblest class. The President comes near enough to these; if he does not, the caucus does, the primary ward and town-meeting, and what is important does reach him.

¶ The men, the women, all over this land shrill their exclamations of impatience and indignation at what is short-coming or is unbecoming in the government,—at the want of humanity, of morality,—ever on broad

grounds of general justice, and not on the class-feeling which narrows the perception of English, French, German people at home.

¶ In this fact, that we are a nation of individuals, that we have a highly intellectual organization, that we can see and feel moral distinctions, and that on such an organization sooner or later the moral laws must tell, to such ears must speak,—in this is our hope. For if the prosperity of this country has been merely the obedience of man to the guiding of Nature,—of great rivers and prairies,—yet is there fate above fate, if we choose to spread this language; or if there is fate in corn and cotton, so is there fate in thought,—this, namely, that the largest thought and the widest love are born to victory, and must prevail.

¶ The revolution is the work of no man, but the eternal effervescence of Nature. It never did not work. And we say that revolutions beat all the insurgents, be they never so determined and politic; that the great interests of mankind, being at every moment through ages in favor of justice and the largest liberty, will always, from time to time, gain on the adversary and at last win the day. Never country had such a fortune, as men call fortune, as this, in its geography, its history, and in its majestic possibilities.

¶ We have much to learn, much to correct,—a great deal of lying vanity. The spread eagle must fold his foolish wings and be less of a peacock; must keep his wings to carry the thunderbolt when he is commanded. We must realize our rhetoric and our rituals. Our national flag is not affecting, as it should be, because it does not represent the population of the United States, but some Baltimore or Chicago or Cincinnati or Philadelphia caucus; not union or justice, but selfishness and cunning. If we never put on the liberty-cap until we were freemen by love and self-denial, the liberty-cap would mean something. I wish to see America not like the old powers of the earth, grasping, exclusive and narrow, but a benefactor such as no country ever was, hospitable to all nations, legislating for all nationalities. Nations were made to help each other as much as families were; and all advancement is by ideas, and not by brute force or mechanic force.

¶ In this country, with our practical understanding, there is, at present, a great sensualism, a headlong devotion to trade and to the conquest of the continent,—to each man as large a share of the same as he can carve for himself,—an extravagant confidence in our talent and activity, which becomes, whilst successful, a scornful materialism,—but with the fault, of course, that it has no depth, no reserved force whereon to fall back when a reverse comes.

¶ That repose which is the ornament and ripeness of man is not American. That repose which indicates a faith in the laws of the universe,—a faith that they will fulfil themselves, and are not to be impeded, transgressed or accelerated. Our people are too slight and vain. They are easily elated and easily depressed. See how fast they extend the fleeting fabric of their trade,—not at all considering the remote reaction and bankruptcy, but with the same abandonment to the moment and the facts of the hour as the Esquimau who sells his bed in the morning. Our people act on the moment, and from external impulse. They all lean on some other, and this superstitiously, and not from insight of his merit. They follow a fact; they follow success, and not skill. Therefore, as soon as the success stops and the admirable man blunders, they quit him; already they remember that they long ago suspected his judgment, and they transfer the repute of judgment to the next prosperous person who has not yet blundered. Of course this levity makes them as easily despond. It seems as if history gave no account of any society in which despondency came so readily to heart as we see it and feel it in ours. Young men at thirty and even earlier lose all spring and vivacity, and if they fail in their first enterprise throw up the game.

¶ The source of mischief is the extreme difficulty with which men are roused from the torpor of every day. Blessed is all that agitates the mass, breaks up this torpor, and begins motion. *Corpora non agunt nisi soluta;* the chemical rule is true in mind. Contrast, change, interruption, are necessary to new activity and new combinations.

¶ If a temperate wise man should look over our American society, I think the first danger that would excite his alarm would be the European influences on this country. We buy much of Europe that does not make us better men; and mainly the expensiveness which is ruining that country. We import trifles, dancers, singers, laces, books of patterns, modes, gloves and cologne, manuals of Gothic architecture, steam-made ornaments. America is provincial. It is an immense Halifax. See the secondariness and aping of foreign and English life, that runs through this country, in building, in dress, in eating, in books. Every village, every city, has its architecture, its costume, its hotel, its private house, its church, from England.

OURS is the country of poor men. Here is practical democracy; here is the human race poured out over the continent to do itself justice; all mankind in its shirt-sleeves; not grimacing like poor rich men in cities, pretending to be rich, but unmistakably taking off its coat to hard work, when labor is sure to pay.

¶ Our politics threaten her. Her manners threaten us. Life is grown and growing so costly that it threatens to kill us. A man is coming, here as there, to value himself on what he can buy. Worst of all, his expense is not his own, but a far-off copy of Osborne House or the Elysée. The tendency of this is to make all men alike; to extinguish individualism and choke up all the channels of inspiration from God in man. We lose our invention and descend into imitation. A man no longer conducts his own life. It is manufactured for him. The tailor makes your dress; the baker your bread; the upholsterer, from an imported book of patterns, your furniture; the Bishop of London your faith.

¶ In the planters of this country, in the seventeenth century, the conditions of the country, combined with the impatience of arbitrary power which they brought from England, forced them to a wonderful personal independence and to a certain heroic planting and trading. Later this strength appeared in the solitudes of the West, where a man is made a hero by the varied emergencies of his lonely farm, and neighborhoods must combine against the Indians, or the horse-thieves, or the river rowdies, by organizing themselves into committees of vigilance. Thus the land and sea educate the people, and bring out presence of mind, self-reliance, and hundred-handed activity. These are the people for an emergency. They are not to be surprised, and can find a way out of any peril. This rough and ready force becomes them, and makes them fit citizens and civilizers. But if we found them clinging to English traditions, which are graceful enough at home, as the English Church, and entailed estates, and distrust of popular election, we should feel this reactionary, and absurdly out of place.

¶ Let the passion for America cast out the passion for Europe. Here let there be what the earth waits for,—exalted manhood. What this country longs for is personalities, grand persons, to counteract its materialities. For it is the rule of the universe that corn shall serve man, and not man corn.

¶ They who find America insipid—they for whom London and Paris have spoiled their own homes—can be spared to return to those cities. I not only see

a career at home for more genius than we have, but for more than there is in the world.

¶ The class of which I speak make themselves merry without duties. They sit in decorated club-houses in the cities, and burn tobacco and play whist; in the country they sit idle in stores and bar-rooms, and burn tobacco, and gossip and sleep. They complain of the flatness of American life; "America has no illusions, no romance." They have no perception of its destiny. They are not Americans.

¶ The felon is the logical extreme of the epicure and coxcomb. Selfish luxury is the end of both, though in one it is decorated with refinements, and in the other brutal. But my point now is, that this spirit is not American.

I WISH to see America not like the old powers of the earth, grasping, exclusive and narrow, but a benefactor such as no country ever was, hospitable to all nations, legislating for all nationalities. Nations were made to help each other as much as families were; and all advancement is by ideas, and not by brute force or mechanic force.

¶ Our young men lack idealism. A man for success must not be pure idealist, then he will practically fail; but he must have ideas, must obey ideas, or he might as well be the horse he rides on. A man does not want to be sun-dazzled, sun-blind; but every man must have glimmer enough to keep him from knocking his head against the walls. And it is in the interest of civilization and good society and friendship, that I dread to hear of well-born, gifted and amiable men, that they have this indifference, disposing them to this despair.

¶ Of no use are the men who study to do exactly as was done before, who can never understand that to-day is a new day. There never was such a combination as this of ours, and the rules to meet it are not set down in any history. We want men of original perception and original action, who can open their eyes wider than to a nationality,—namely, to considerations of benefit to the human race,—can act in the interest of civilization; men of elastic, men of moral mind, who can live in the moment and take a step forward. Columbus was no backward-creeping crab, nor was Martin Luther, nor John Adams, nor Patrick Henry, nor Thomas Jefferson; and the Genius or Destiny of America is no log or sluggard, but a man incessantly advancing, as the shadow on the dial's face, or the heavenly body by whose light it is marked.

¶ The flowering of civilization is the finished man, the man of sense, of grace, of accomplishment, of social power,—the gentleman. What hinders that he be born here? The new times need a new man, the complemental man, whom plainly this country must furnish. Freer swing his arms; farther pierce his eyes; more forward and forthright his whole build and rig than the Englishman's, who, we see, is much imprisoned in his backbone.

¶ 'T is certain that our civilization is yet incomplete, it has not ended nor given sign of ending in a hero. 'T is a wild democracy; the riot of mediocrities and dishonesties and fudges. Ours is the age of the omnibus, of the third person plural, of Tammany Hall. Is it that Nature has only so much vital force, and must dilute it if it is to be multiplied into millions? The beautiful is never plentiful. Then Illinois and Indiana, with their spawning loins, must needs be ordinary.

¶ It is not a question whether we shall be a multitude of people. No, that has been conspicuously decided already; but whether we shall be the new nation, the guide and lawgiver of all nations, as having clearly chosen and firmly held the simplest and best rule of political society.

¶ Now, if the spirit which years ago armed this country against rebellion, and put forth such gigantic energy in the charity of the Sanitary Commission, could be waked to the conserving and creating duty of making the laws just and humane, it were to enroll a great constituency of religious, self-respecting, brave, tender, faithful obeyers of duty, lovers of men, filled with loyalty to each other, and with the simple and sublime purpose of carrying out in private and in public action the desire and need of mankind.

¶ Here is the post where the patriot should plant himself; here the altar where virtuous young men, those to whom friendship is the dearest covenant, should bind each other to loyalty; where genius should kindle its fires and bring forgotten truth to the eyes of men.

¶ It is not possible to extricate yourself from the questions in which your age is involved. Let the good citizen perform the duties put on him here and now. It is not by heads reverted to the dying Demosthenes, or to Luther, or to Wallace, or to George Fox, or to George Washington, that you can combat the dangers and dragons that beset the United States at this time. I believe this cannot be accomplished by dunces or idlers, but requires docility, sympathy, and religious receiving from higher principles; for liberty, like religion, is a short and hasty fruit, and like all power subsists only by new rallyings on the source of inspiration.

¶ Power can be generous. The very grandeur of the means which offer themselves to us should suggest grandeur in the direction of our expenditure. If our mechanic arts are unsurpassed in usefulness, if we have taught the river to make shoes and nails and carpets, and the bolt of heaven to write our letters like a Gillot pen, let these wonders work for honest humanity, for the poor, for justice, genius and the public good. Let us realize that this country, the last found, is the great charity of God to the human race.

¶ America should affirm and establish that in no instance shall the guns go in advance of the present right. We shall not make *coups d'état* and afterwards explain and pay, but shall proceed like William Penn, or whatever other Christian or humane person who treats with the Indian or the foreigner, on principles of honest trade and mutual advantage. We can see that the Constitution and the law in America must be written on ethical principles, so that the entire power of the spiritual world shall hold the citizen loyal, and repel the enemy as by force of nature. It should be mankind's bill of rights, or Royal Proclamation of the Intellect ascending the throne, announcing its good pleasure that now, once for all, the world shall be governed by common sense and law of morals.

¶ The end of all political struggle is to establish morality as the basis of all legislation. 'T is not free institutions, 't is not a democracy that is the end,—no, but only the means. Morality is the object of government. We want a state of things in which crime will not pay; a state of things which allows every man the largest liberty compatible with the liberty of every other man.

¶ Humanity asks that government shall not be ashamed to be tender and paternal, but that democratic institutions shall be more thoughtful for the interests of women, for the training of children, and for the welfare of sick and unable persons, and serious care of criminals, than was ever any the best government of the Old World.

¶ The genius of the country has marked out our true policy,—opportunity. Opportunity of civil rights, of education, of personal power, and not less of wealth; doors wide open. If I could have it,—free trade with all the world without toll or custom-houses, invitation as we now make to every nation, to every race and skin, white men, red men, yellow men, black men; hospitality of fair field and equal laws to all. Let them compete, and success to the strongest, the wisest and the best. The land is wide enough, the soil has bread for all.

¶ I hope America will come to have its pride in being a nation of servants, and not of the served. How can men have any other ambition where the reason has not suffered a disastrous eclipse? Whilst every man can say I serve,—to the whole extent of my being I apply my faculty to the service of mankind in my especial place,—he therein sees and shows a reason for his being in the world, and is not a moth or incumbrance in it.

¶ The distinction and end of a soundly constituted man is his labor. Use is inscribed on all his faculties. Use is the end to which he exists. As the tree exists for its fruit, so a man for his work. A fruitless plant, an idle animal, does not stand in the universe. They are all toiling, however secretly or slowly, in the province assigned them, and to a use in the economy of the world; the higher and more complex organizations to higher and more catholic service. And man seems to play, by his instincts and activity, a certain part that even tells on the general face of the planet, drains swamps, leads rivers into dry countries for their irrigation, perforates forests and stony mountain chains with roads, hinders the inroads of the sea on the continent, as if dressing the globe for happier races.

¶ On the whole, I know that the cosmic results will be the same, whatever the daily events may be. Happily we are under better guidance than of statesmen. Pennsylvania coal-mines and New York shipping and free labor, though not idealists, gravitate in the ideal direction. Nothing less large than justice can keep them in good temper. Justice satisfies everybody, and justice alone. No monopoly must be foisted in, no weak party or nationality sacrificed, no coward compromise conceded to a strong partner. Every one of these is the seed of vice, war and national disorganization. It is our part to carry out to the last the ends of liberty and justice. We shall stand, then, for vast interests; north and south, east and west will be present to our minds, and our vote will be as if they voted, and we shall know that our vote secures the foundations of the state, good will, liberty and security of traffic and of production, and mutual increase of good will in the great interests.

¶ Our helm is given up to a better guidance than our own; the course of events is quite too strong for any helmsman, and our little wherry is taken in tow by the ship of the great Admiral which knows the way, and has the force to draw men and states and planets to their good.

¶ Such and so potent is this high method by which the Divine Providence sends the chiefest benefits under the mask of calamities, that I do not think we shall by any perverse ingenuity prevent the blessing.

¶ In seeing this guidance of events, in seeing this felicity without example that has rested on the Union thus far, I find new confidence for the future.

¶ I could heartily wish that our will and endeavor were more active parties to the work. But I see in all directions the light breaking. Trade and government will not alone be the favored aims of mankind, but every useful, every elegant art, every exercise of the imagination, the height of reason, the noblest affection, the purest religion will find their home in our institutions, and write our laws for the benefit of men.

MISCELLANIES

Letter to President Martin Van Buren

SIR: The seat you fill places you in a relation of credit and nearness to every citizen. By right and natural position, every citizen is your friend. Before any acts contrary to his own judgment or interest have repelled the affections of any man, each may look with trust and living anticipation to your government. Each has the highest right to call your attention to such subjects as are of a public nature, and properly belong to the chief magistrate; and the good magistrate will feel a joy in meeting such confidence. In this belief and at the instance of a few of my friends and neighbors, I crave of your patience a short hearing for their sentiments and my own: and the circumstance that my name will be utterly unknown to you will only give the fairer chance to your equitable construction of what I have to say.

¶ Sir, my communication respects the sinister rumors that fill this part of the country concerning the Cherokee people. The interest always felt in the aboriginal population—an interest naturally growing as that decays—has been heightened in regard to this tribe. Even in our distant State some good rumor of their worth and civility has arrived. We have learned with joy their improvement in the social arts. We have read their newspapers. We have seen some of them in our schools and colleges. In common with the great body of the American people, we have witnessed with sympathy the painful labors of these red men to redeem their own race from the doom of eternal inferiority, and to borrow and domesticate in the tribe the arts and customs of the Caucasian race. And notwithstanding the unaccountable apathy with which of late years the Indians have been sometimes abandoned to their enemies, it is not to be doubted that it is the good pleasure and the understanding of all humane persons in the Republic, of the men and the matrons sitting in the thriving independent families all over the land, that they shall be duly cared for; that they shall taste justice and love from all to whom we have delegated the office of dealing with them.

¶ The newspapers now inform us that, in December, 1835, a treaty contracting for the exchange of all the Cherokee territory was pretended to be made by an agent on the part of the United States with some persons appearing on the part of the Cherokees; that the fact afterwards transpired that these deputies did by no means represent the will of the nation; and that, out of eighteen thousand souls composing the nation, fifteen thousand six hundred and sixty-eight have protested against the so-called treaty. It now appears that the government of the United States choose to hold the Cherokees to this sham treaty, and are proceeding to execute the same. Almost the entire Cherokee Nation stand up and say, "This is not our act. Behold us. Here are we. Do not mistake that handful of deserters for us;" and the American President and the Cabinet, the Senate and the House of Representatives, neither hear these men nor see them, and are contracting to put this active nation into carts and boats, and to drag them over mountains and rivers to a wilderness at a vast distance beyond the Mississippi. And a paper purporting to be an army order fixes a month from this day as the hour for this doleful removal.

¶ In the name of God, sir, we ask you if this be so. Do the newspapers rightly inform us? Men and women with pale and perplexed faces meet one another in the streets and churches here, and ask if this be so. We have inquired if this be a gross misrepresentation from the party opposed to the government and anxious to blacken it with the people. We have looked in the newspapers of

different parties and find a horrid confirmation of the tale. We are slow to believe it. We hoped the Indians were misinformed, and that their remonstrance was premature, and will turn out to be a needless act of terror.

¶ The piety, the principle that is left in the United States, if only in its coarsest form, a regard to the speech of men,—forbid us to entertain it as a fact. Such a dereliction of all faith and virtue, such a denial of justice, and such deafness to screams for mercy were never heard of in times of peace and in the dealing of a nation with its own allies and wards, since the earth was made. Sir, does this government think that the people of the United States are become savage and mad? From their mind are the sentiments of love and a good nature wiped clean out? The soul of man, the justice, the mercy that is the heart's heart in all men, from Maine to Georgia, does abhor this business.

¶ In speaking thus the sentiments of my neighbors and my own, perhaps I overstep the bounds of decorum. But would it not be a higher indecorum coldly to argue a matter like this? We only state the fact that a crime is projected that confounds our understandings by its magnitude,—a crime that really deprives us as well as the Cherokees of a country? for how could we call the conspiracy that should crush these poor Indians our government, or the land that was cursed by their parting and dying imprecations our country, any more? You, sir, will bring down that renowned chair in which you sit into infamy if your seal is set to this instrument of perfidy; and the name of this nation, hitherto the sweet omen of religion and liberty, will stink to the world.

¶ You will not do us the injustice of connecting this remonstrance with any sectional and party feeling. It is in our hearts the simplest commandment of brotherly love. We will not have this great and solemn claim upon national and human justice huddled aside under the flimsy plea of its being a party act. Sir, to us the questions upon which the government and the people have been agitated during the past year, touching the prostration of the currency and of trade, seem but motes in comparison. These hard times, it is true, have brought the discussion home to every farmhouse and poor man's house in this town; but it is the chirping of grasshoppers beside the immortal question whether justice shall be done by the race of civilized to the race of savage man,—whether all the attributes of reason, of civility, of justice, and even of mercy, shall be put off by the American people, and so vast an outrage upon the Cherokee Nation and upon human nature shall be consummated.

¶ One circumstance lessens the reluctance with which I intrude at this time on your attention my conviction that the government ought to be admonished of a new historical fact, which the discussion of this question has disclosed, namely, that there exists in a great part of the Northern people a gloomy diffidence in the *moral* character of the government.

¶ On the broaching of this question, a general expression of despondency, of disbelief that any good will accrue from a remonstrance on an act of fraud and robbery, appeared in those men to whom we naturally turn for aid and counsel. Will the American government steal? Will it lie? Will it kill?—We ask triumphantly. Our counsellors and old statesmen here say that ten years ago they would have staked their lives on the affirmation that the proposed Indian measures could not be executed; that the unanimous country would put them down. And now the steps of this crime follow each other so fast, at such fatally quick time, that the millions of virtuous citizens, whose agents the government are, have no place to interpose, and must shut their eyes until the last howl and wailing of these tormented villages and tribes shall afflict the ear of the world.

¶ I will not hide from you, as an indication of the alarming distrust, that a letter addressed as mine is, and suggesting to the mind of the Executive the

plain obligations of man, has a burlesque character in the apprehensions of some of my friends. I, sir, will not beforehand treat you with the contumely of this distrust. I will at least state to you this fact, and show you how plain and humane people, whose love would be honor, regard the policy of the government, and what injurious inferences they draw as to the minds of the governors. A man with your experience in affairs must have seen cause to appreciate the futility of opposition to the moral sentiment. However feeble the sufferer and however great the oppressor, it is in the nature of things that the blow should recoil upon the aggressor. For God is in the sentiment, and it cannot be withstood. The potentate and the people perish before it; but with it, and as its executor, they are omnipotent.

¶ I write thus, sir, to inform you of the state of mind these Indian tidings have awakened here, and to pray with one voice more that you, whose hands are strong with the delegated power of fifteen millions of men, will avert with that might the terrific injury which threatens the Cherokee tribe.

¶ With great respect, sir, I am your fellow citizen,

RALPH WALDO EMERSON.

The Assault Upon Mr. Sumner

MR. CHAIRMAN: I sympathize heartily with the spirit of the resolutions. The events of the last few years and months and days have taught us the lessons of centuries. I do not see how a barbarous community and a civilized community can constitute one state. I think we must get rid of slavery, or we must get rid of freedom. Life has not parity of value in the free state and in the slave state. In one, it is adorned with education, with skilful labor, with arts, with long prospective interests, with sacred family ties, with honor and justice. In the other, life is a fever; man is an animal, given to pleasure, frivolous, irritable, spending his days in hunting and practising with deadly weapons to defend himself against his slaves and against his companions brought up in the same idle and dangerous way. Such people live for the moment, they have properly no future, and readily risk on every passion a life which is of small value to themselves or to others. Many years ago, when Mr. Webster was challenged in Washington to a duel by one of these madcaps, his friends came forward with prompt good sense and said such a thing was not to be thought of; Mr. Webster's life was the property of his friends and of the whole country, and was not to be risked on the turn of a vagabond's ball. Life and life are incommensurate. The whole state of South Carolina does not now offer one or any number of persons who are to be weighed for a moment in the scale with such a person as the meanest of them all has now struck down. The very conditions of the game must always be,—the worst life staked against the best. It is the best whom they desire to kill. It is only when they cannot answer your reasons, that they wish to knock you down. If, therefore, Massachusetts could send to the Senate a better man than Mr. Sumner, his death would be only so much the more quick and certain. Now, as men's bodily strength, or skill with knives and guns, is not usually in proportion to their knowledge and mother-wit, but oftener in the inverse ratio, it will only do to send foolish persons to Washington, if you wish them to be safe.

¶ The outrage is the more shocking from the singularly pure character of its victim. Mr. Sumner's position is exceptional in its honor. He had not taken his degrees in the caucus and in hack politics. It is notorious that, in the long time when his election was pending, he refused to take a single step to secure it. He would not so much as go up to the state house to shake hands with this or that person whose good will was reckoned important by his friends. He was elected. It was a homage to character and talent. In Congress, he did not rush into party position. He sat long

silent and studious. His friends, I remember, were told that they would find Sumner a man of the world like the rest; ' 't is quite impossible to be at Washington and not bend; he will bend as the rest have done.' Well, he did not bend. He took his position and kept it. He meekly bore the cold shoulder from some of his New England colleagues, the hatred of his enemies, the pity of the indifferent, cheered by the love and respect of good men with whom he acted; and has stood for the North, a little in advance of all the North, and therefore without adequate support. He has never faltered in his maintenance of justice and freedom. He has gone beyond the large expectation of his friends in his increasing ability and his manlier tone. I have heard that some of his political friends tax him with indolence or negligence in refusing to make electioneering speeches, or otherwise to bear his part in the labor which party organization requires. I say it to his honor. But more to his honor are the faults which his enemies lay to his charge. I think, sir, if Mr. Sumner had any vices, we should be likely to hear of them. They have fastened their eyes like microscopes for five years on every act, word, manner and movement, to find a flaw,—and with what result? His opponents accuse him neither of drunkenness nor debauchery, nor job, nor speculation, nor rapacity, nor personal aims of any kind. No; but with what? Why, beyond this charge, which it is impossible was ever sincerely made, that he broke over the proprieties of debate, I find him accused of publishing his opinion of the Nebraska conspiracy in a letter to the people of the United States, with discourtesy. Then, that he is an abolitionist; as if every sane human being were not an abolitionist, or a believer that all men should be free. And the third crime he stands charged with, is, that his speeches were written before they were spoken; which, of course, must be true in Sumner's case, as it was true of Webster, of Adams, of Calhoun, of Burke, of Chatham, of Demosthenes; of every first-rate speaker that ever lived. It is the high compliment he pays to the intelligence of the Senate and of the country. When the same reproach was cast on the first orator of ancient times by some caviller of his day, he said, "I should be ashamed to come with one unconsidered word before such an assembly." Mr. Chairman, when I think of these most small faults as the worst which party hatred could allege, I think I may borrow the language which Bishop Burnet applied to Sir Isaac Newton, and say that Charles Sumner "has the whitest soul I ever knew."

¶ Well, sir, this noble head, so comely and so wise, must be the target for a pair of bullies to beat with clubs. The murderer's brand shall stamp their foreheads wherever they may wander in the earth. But I wish, sir, that the high respects of this meeting shall be expressed to Mr. Sumner; that a copy of the resolutions that have been read may be forwarded to him. I wish that he may know the shudder of terror which ran through all this community on the first tidings of this brutal attack. Let him hear that every man of worth in New England loves his virtues; that every mother thinks of him as the protector of families; that every friend of freedom thinks him the friend of freedom. And if our arms at this distance cannot defend him from assassins, we confide the defence of a life so precious to all honorable men and true patriots, and to the Almighty Maker of men.

Affairs in Kansas

I REGRET, with all this company, the absence of Mr. Whitman of Kansas, whose narrative was to constitute the interest of this meeting. Mr. Whitman is not here; but knowing, as we all do, why he is not, what duties kept him at home, he is more than present. His vacant chair speaks for him. For quite other reasons, I had been wiser to have stayed at home, unskilled as I am to address a political meeting, but it is impossible for the most recluse to extricate himself from the questions of the times.

¶ There is this peculiarity about the case of Kansas, that all the right is on one side. We hear the screams of hunted wives and children answered by the howl of the butchers. The testimony of the telegraphs from St. Louis and the border confirm the worst details. The printed letters of border ruffians avow the facts. When pressed to look at the cause of the mischief in the Kansas laws, the President falters and declines the discussion; but his supporters in the Senate, Mr. Cass, Mr. Geyer, Mr. Hunter, speak out, and declare the intolerable atrocity of the code. It is a maxim that all party spirit produces the incapacity to receive natural impressions from facts; and our recent political history has abundantly borne out the maxim. But these details that have come from Kansas are so horrible, that the hostile press have but one word in reply, namely, that it is all exaggeration, 't is an Abolition lie. Do the Committee of Investigation say that the outrages have been overstated? Does their dismal catalogue of private tragedies show it? Do the private letters? Is it an exaggeration, that Mr. Hopps of Somerville, Mr. Hoyt of Deerfield, Mr. Jennison of Groton, Mr. Phillips of Berkshire, have been murdered? That Mr. Robinson of Fitchburg has been imprisoned? Rev. Mr. Nute of Springfield seized, and up to this time we have no tidings of his fate?

¶ In these calamities under which they suffer, and the worst which threaten them, the people of Kansas ask for bread, clothes, arms and men, to save them alive, and enable them to stand against these enemies of the human race. They have a right to be helped, for they have helped themselves.

¶ This aid must be sent, and this is not to be doled out as an ordinary charity; but bestowed up to the magnitude of the want, and, as has been elsewhere said, "on the scale of a national action." I think we are to give largely, lavishly, to these men. And we must prepare to do it. We must learn to do with less, live in a smaller tenement, sell our apple-trees, our acres, our pleasant houses. I know people who are making haste to reduce their expenses and pay their debts, not with a view to new accumulations, but in preparation to save and earn for the benefit of the Kansas emigrants.

¶ We must have aid from individuals, —we must also have aid from the state. I know that the last legislature refused that aid. I know that lawyers hesitate on technical grounds, and wonder what method of relief the legislature will apply. But I submit that, in a case like this, where citizens of Massachusetts, legal voters here, have emigrated to national territory under the sanction of every law, and are then set on by highwaymen, driven from their new homes, pillaged, and numbers of them killed and scalped, and the whole world knows that this is no accidental brawl, but a systematic war to the knife, and in defiance of all laws and liberties,— I submit that the governor and legislature should neither slumber nor sleep till they have found out how to send effectual aid and comfort to these poor farmers, or else should resign their seats to those who can. But first let them hang the halls of the state-house with black crape, and order funeral service to be said for the citizens whom they were unable to defend.

¶ We stick at the technical difficulties. I think there never was a people so choked and stultified by forms. We adore the forms of law, instead of making them vehicles of wisdom and justice. I like the primary assembly. I own I have little esteem for governments. I esteem them only good in the moment when they are established. I set the private man first. He only who is able to stand alone is qualified to be a citizen. Next to the private man, I value the primary assembly, met to watch the government and to correct it. That is the theory of the American State, that it exists to execute the will of the citizens, is always responsible to them, and is always to be changed when it does not. First, the private citizen, then the primary assembly, and the government last.

¶ In this country for the last few years the government has been the chief obstruction to the common weal. Who doubts that Kansas would have been very well settled, if the United States had let it alone? The government armed and led the ruffians against the poor farmers. I do not know any story so gloomy as the politics of this country for the last twenty years, centralizing ever more manifestly round one spring, and that a vast crime, and ever more plainly, until it is notorious that all promotion, power and policy are dictated from one source, — illustrating the fatal effects of a false position to demoralize legislation and put the best people always at a disadvantage; —one crime always present, always to be varnished over, to find fine names for; and we free statesmen, as accomplices to the guilt, ever in the power of the grand offender.

I HAVE little esteem for governments. I set the private man first. He only who is able to stand alone is qualified to be a citizen. Next to the private man, I value the primary assembly, met to watch the government and to correct it.

¶ Language has lost its meaning in the universal cant. *Representative Government* is really misrepresentative; *Union* is a conspiracy against the Northern States which the Northern States are to have the privilege of paying for; the *adding of Cuba and Central America* to the slave marts is *enlarging the area of Freedom. Manifest Destiny, Democracy, Freedom,* fine names for an ugly thing. They call it otto of rose and lavender, —I call it bilge-water. They call it Chivalry and Freedom; I call it the stealing all the earnings of a poor man and the earnings of his little girl and boy, and the earnings of all that shall come from him, his children's children forever.

¶ But this is Union, and this is Democracy; and our poor people, led by the nose by these fine words, dance and sing, ring bells and fire cannon, with every new link of the chain which is forged for their limbs by the plotters in the Capitol.

¶ What are the results of law and union? There is no Union. Can any citizen of Massachusetts travel in honor through Kentucky and Alabama and speak his mind? Or can any citizen of the Southern country who happens to think kidnapping a bad thing, say so? Let Mr. Underwood of Virginia answer. Is it to be supposed that there are no men in Carolina who dissent from the popular sentiment now reigning there? It must happen, in the variety of human opinions, that there are dissenters. They are silent as the grave. Are there no women in that country,— women, who always carry the conscience of a people? Yet we have not heard one discordant whisper.

¶ In the free states, we give a snivelling support to slavery. The judges give cowardly interpretations to the law, in direct opposition to the known foundation of all law, that *every immoral statute is void.* And here of Kansas, the President says: "Let the complainants go to the courts;" though he knows that when the poor plundered farmer comes to the court, he finds the ringleader who has robbed him dismounting from his own horse, and unbuckling his knife to sit as his judge.

¶ The President told the Kansas Committee that the whole difficulty grew from "the factious spirit of the Kansas people respecting institutions which they need not have concerned themselves about." A very remarkable speech from a Democratic President to his fellow citizens, that they are not to concern themselves with institutions which they

alone are to create and determine. The President is a lawyer, and should know the statutes of the land. But I borrow the language of an eminent man, used long since, with far less occasion: "If that be law, let the ploughshare be run under the foundations of the Capitol;" —and if that be Government, extirpation is the only cure.

¶ I am glad to see that the terror at disunion and anarchy is disappearing. Massachusetts, in its heroic day, had no government—was an anarchy. Every man stood on his own feet, was his own governor; and there was no breach of peace from Cape Cod to Mount Hoosac. California, a few years ago, by the testimony of all people at that time in the country, had the best government that ever existed. Pans of gold lay drying outside of every man's tent, in perfect security. The land was measured into little strips of a few feet wide, all side by side. A bit of ground that your hand could cover was worth one or two hundred dollars, on the edge of your strip; and there was no dispute. Every man throughout the country was armed with knife and revolver, and it was known that instant justice would be administered to each offence, and perfect peace reigned. For the Saxon man, when he is well awake, is not a pirate but a citizen, all made of hooks and eyes, and links himself naturally to his brothers, as bees hook themselves to one another and to their queen in a loyal swarm.

¶ But the hour is coming when the strongest will not be strong enough. A harder task will the new revolution of the nineteenth century be than was the revolution of the eighteenth century. I think the American Revolution bought its glory cheap. If the problem was new, it was simple. If there were few people, they were united, and the enemy three thousand miles off. But now, vast property, gigantic interests, family connections, webs of party, cover the land with a network that immensely multiplies the dangers of war.

¶ Fellow citizens, in these times full of the fate of the Republic, I think the towns should hold town meetings, and resolve themselves into Committees of Safety, go into permanent sessions, adjourning from week to week, from month to month. I wish we could send the sergeant-at-arms to stop every American who is about to leave the country. Send home every one who is abroad, lest they should find no country to return to. Come home and stay at home, while there is a country to save. When it is lost it will be time enough then for any who are luckless enough to remain alive to gather up their clothes and depart to some land where freedom exists.

John Brown

Boston Speech

MR. CHAIRMAN, and FELLOW CITIZENS: I share the sympathy and sorrow which have brought us together. Gentlemen who have preceded me have well said that no wall of separation could here exist. This commanding event which has brought us together, eclipses all others which have occurred for a long time in our history, and I am very glad to see that this sudden interest in the hero of Harper's Ferry has provoked an extreme curiosity in all parts of the Republic, in regard to the details of his history. Every anecdote is eagerly sought, and I do not wonder that gentlemen find traits of relation readily between him and themselves. One finds a relation in the church, another in the profession, another in the place of his birth. He was happily a representative of the American Republic. Captain John Brown is a farmer, the fifth in descent from Peter Brown, who came to Plymouth in the Mayflower, in 1620. All the six have been farmers. His grandfather, of Simsbury, in Connecticut, was a captain in the Revolution. His father, largely interested as a raiser of stock, became a contractor to supply the army with beef, in the war of 1812, and our Captain John Brown, then a boy, with his father was present and witnessed the surrender of General Hull. He cherishes

a great respect for his father, as a man of strong character, and his respect is probably just. For himself, he is so transparent that all men see him through. He is a man to make friends wherever on earth courage and integrity are esteemed, the rarest of heroes, a pure idealist, with no by-ends of his own. Many of you have seen him, and every one who has heard him speak has been impressed alike by his simple, artless goodness, joined with his sublime courage. He joins that perfect Puritan faith which brought his fifth ancestor to Plymouth Rock with his grandfather's ardor in the Revolution. He believes in two articles,—two instruments, shall I say?—the Golden Rule and the Declaration of Independence; and he used this expression in conversation here concerning them, "Better that a whole generation of men, women and children should pass away by a violent death than that one word of either should be violated in this country." There is a Unionist,—there is a strict constructionist for you. He believes in the Union of the States, and he conceives that the only obstruction to the Union is Slavery, and for that reason, as a patriot, he works for its abolition. The governor of Virginia has pronounced his eulogy in a manner that discredits the moderation of our timid parties. His own speeches to the court have interested the nation in him. What magnanimity, and what innocent pleading, as of childhood! You remember his words: "If I had interfered in behalf of the rich, the powerful, the intelligent, the so-called great, or any of their friends, parents, wives or children, it would all have been right. But I believe that to have interfered as I have done, for the despised poor, was not wrong, but right."

¶ It is easy to see what a favorite he will be with history, which plays such pranks with temporary reputations. Nothing can resist the sympathy which all elevated minds must feel with Brown, and through them the whole civilized world; and if he must suffer, he must drag official gentlemen into an immortality most undesirable, of which they have already some disagreeable forebodings. Indeed, it is the *reductio ad absurdum* of Slavery, when the governor of Virginia is forced to hang a man whom he declares to be a man of the most integrity, truthfulness and courage he has ever met. Is that the kind of man the gallows is built for? It were bold to affirm that there is within that broad commonwealth, at this moment, another citizen as worthy to live, and as deserving of all public and private honor, as this poor prisoner.

¶ But we are here to think of relief for the family of John Brown. To my eyes, that family looks very large and very needy of relief. It comprises his brave fellow sufferers in the Charlestown Jail; the fugitives still hunted in the mountains of Virginia and Pennsylvania; the sympathizers with him in all the states; and, I may say, almost every man who loves the Golden Rule and the Declaration of Independence, like him, and who sees what a tiger's thirst threatens him in the malignity of public sentiment in the slave states. It seems to me that a common feeling joins the people of Massachusetts with him.

¶ I said John Brown was an idealist. He believed in his ideas to that extent that he existed to put them all into action; he said "he did not believe in moral suasion, he believed in putting the thing through." He saw how deceptive the forms are. We fancy, in Massachusetts, that we are free; yet it seems the government is quite unreliable. Great wealth, great population, men of talent in the executive, on the bench,—all the forms right,—and yet, life and freedom are not safe. Why? Because the judges rely on the forms, and do not, like John Brown, use their eyes to see the fact behind the forms. They assume that the United States can protect its witness or its prisoner. And in Massachusetts that is true, but the moment he is carried out of the bounds of Massachusetts, the United States, it is notorious, afford no protection at all; the government, the judges, are an enven-

omed party, and give such protection as they give in Utah to honest citizens, or in Kansas; such protection as they gave to their own Commodore Paulding, when he was simple enough to mistake the formal instructions of his government for their real meaning. The state judges fear collision between their two allegiances; but there are worse evils than collision, namely, the doing substantial injustice. A good man will see that the use of a judge is to secure good government, and where the citizen's weal is imperilled by abuse of the federal power, to use that arm which can secure it, viz., the local government. Had that been done on certain calamitous occasions, we should not have seen the honor of Massachusetts trailed in the dust, stained to all ages, once and again, by the ill-timed formalism of a venerable bench. If judges cannot find law enough to maintain the sovereignty of the state, and to protect the life and freedom of every inhabitant not a criminal, it is idle to compliment them as learned and venerable. What avails their learning or veneration? At a pinch, they are no more use than idiots. After the mischance they wring their hands, but they had better never have been born. A Vermont judge, Hutchinson, who has the Declaration of Independence in his heart; a Wisconsin judge, who knows that laws are for the protection of citizens against kidnappers, is worth a court-house full of lawyers so idolatrous of forms as to let go the substance. Is any man in Massachusetts so simple as to believe that when a United States Court in Virginia, now, in its present reign of terror, sends to Connecticut, or New York, or Massachusetts, for a witness, it wants him for a witness? No; it wants him for a party; it wants him for meat to slaughter and eat. And your *habeas corpus* is, in any way in which it has been, or, I fear, is likely to be used, a nuisance, and not a protection; for it takes away his right reliance on himself, and the natural assistance of his friends and fellow citizens, by offering him a form which is a piece of paper.

¶ But I am detaining the meeting on matters which others understand better. I hope, then, that, in administering relief to John Brown's family, we shall remember all those whom his fate concerns, all who are in sympathy with him, and not forget to aid him in the best way, by securing freedom and independence in Massachusetts.

John Brown

Salem Speech

MR. CHAIRMAN: I have been struck with one fact, that the best orators who have added their praise to his fame,—and I need not go out of this house to find the purest eloquence in the country,—have one rival who comes off a little better, and that is JOHN BROWN. Everything that is said of him leaves people a little dissatisfied; but as soon as they read his own speeches and letters they are heartily contented,—such is the singleness of purpose which justifies him to the head and the heart of all. Taught by this experience, I mean, in the few remarks I have to make, to cling to his history, or let him speak for himself.

¶ John Brown, the founder of liberty in Kansas, was born in Torrington, Litchfield County, Connecticut, in 1800. When he was five years old his father emigrated to Ohio, and the boy was there set to keep sheep and to look after cattle and dress skins; he went bareheaded and barefooted, and clothed in buckskin. He said that he loved rough play, could never have rough play enough; could not see a seedy hat without wishing to pull it off. But for this it needed that the playmates should be equal; not one in fine clothes and the other in buckskin; not one his own master, hale and hearty, and the other watched and whipped. But it chanced that in Pennsylvania, where he was sent by his father to collect cattle, he fell in with a boy whom he heartily liked and whom he looked upon as his superior. This boy was a slave; he saw him beaten with an iron shovel, and other-

wise maltreated; he saw that this boy had nothing better to look forward to in life, whilst he himself was petted and made much of; for he was much considered in the family where he then stayed, from the circumstance that this boy of twelve years had conducted alone a drove of cattle a hundred miles. But the colored boy had no friend, and no future. This worked such indignation in him that he swore an oath of resistance to slavery as long as he lived. And thus his enterprise to go into Virginia and run off five hundred or a thousand slaves was not a piece of spite or revenge, a plot of two years or of twenty years, but the keeping of an oath made to heaven and earth forty-seven years before. Forty-seven years at least, though I incline to accept his own account of the matter at Charlestown, which makes the date a little older, when he said, "This was all settled millions of years before the world was made."

¶ He grew up a religious and manly person, in severe poverty; a fair specimen of the best stock of New England; having that force of thought and that sense of right which are the warp and woof of greatness. Our farmers were Orthodox Calvinists, mighty in the Scriptures; had learned that life was a preparation, a "probation," to use their word, for a higher world, and was to be spent in loving and serving mankind.

¶ Thus was formed a romantic character absolutely without any vulgar trait; living to ideal ends, without any mixture of self-indulgence or compromise, such as lowers the value of benevolent and thoughtful men we know; abstemious, refusing luxuries, not sourly and reproachfully, but simply as unfit for his habit; quiet and gentle as a child in the house. And, as happens usually to men of romantic character, his fortunes were romantic. Walter Scott would have delighted to draw his picture and trace his adventurous career. A shepherd and herdsman, he learned the manners of animals, and knew the secret signals by which animals communicate. He made his hard bed on the mountains with them; he learned to drive his flock through thickets all but impassable; he had all the skill of a shepherd by choice of breed and by wise husbandry to obtain the best wool, and that for a course of years. And the anecdotes preserved show a far-seeing skill and conduct which, in spite of adverse accidents, should secure, one year with another, an honest reward, first to the farmer, and afterwards to the dealer. If he kept sheep, it was with a royal mind; and if he traded in wool, he was a merchant prince, not in the amount of wealth, but in the protection of the interests confided to him.

¶ I am not a little surprised at the easy effrontery with which political gentlemen, in and out of Congress, take it upon them to say that there are not a thousand men in the North who sympathize with John Brown. It would be far safer and nearer the truth to say that all people, in proportion to their sensibility and self-respect, sympathize with him. For it is impossible to see courage, and disinterestedness, and the love that casts out fear, without sympathy. All women are drawn to him by their predominance of sentiment. All gentlemen, of course, are on his side. I do not mean by "gentlemen," people of scented hair and perfumed handkerchiefs, but men of gentle blood and generosity, "fulfilled with all nobleness," who, like the Cid, give the outcast leper a share of their bed; like the dying Sidney, pass the cup of cold water to the dying soldier who needs it more. For what is the oath of gentle blood and knighthood? What but to protect the weak and lowly against the strong oppressor?

¶ Nothing is more absurd than to complain of this sympathy, or to complain of a party of men united in opposition to slavery. As well complain of gravity, or the ebb of the tide. Who makes the abolitionist? The slaveholder. The sentiment of mercy is the natural recoil which the laws of the universe provide to protect mankind

from destruction by savage passions. And our blind statesmen go up and down, with committees of vigilance and safety, hunting for the origin of this new heresy. They will need a very vigilant committee indeed to find its birthplace, and a very strong force to root it out. For the arch-abolitionist, older than Brown, and older than the Shenandoah Mountains, is Love, whose other name is Justice, which was before Alfred, before Lycurgus, before slavery, and will be after it.

Theodore Parker

AT the death of a good and admirable person we meet to console and animate each other by the recollection of his virtues.

¶ I have the feeling that every man's biography is at his own expense. He furnishes not only the facts but the report. I mean that all biography is autobiography. It is only what he tells of himself that comes to be known and believed. In Plutarch's lives of Alexander and Pericles, you have the secret whispers of their confidence to their lovers and trusty friends. For it was each report of this kind that impressed those to whom it was told in a manner to secure its being told everywhere to the best, to those who speak with authority to their own times and therefore to ours. For the political rule is a cosmical rule, that if a man is not strong in his own district, he is not a good candidate elsewhere.

¶ He whose voice will not be heard here again could well afford to tell his experiences; they were all honorable to him, and were part of the history of the civil and religious liberty of his times. Theodore Parker was a son of the soil, charged with the energy of New England, strong, eager, inquisitive of knowledge, of a diligence that never tired, upright, of a haughty independence, yet the gentlest of companions; a man of study, fit for a man of the world; with decided opinions and plenty of power to state them; rapidly pushing his studies so far as to leave few men qualified to sit as his critics. He elected his part of duty, or accepted nobly that assigned him in his rare constitution. Wonderful acquisition of knowledge, a rapid wit that heard all, and welcomed all that came, by seeing its bearing. Such was the largeness of his reception of facts and his skill to employ them that it looked as if he were some president of council to whom a score of telegraphs were ever bringing in reports; and his information would have been excessive, but for the noble use he made of it ever in the interest of humanity. He had a strong understanding, a logical method, a love for facts, a rapid eye for their historic relations, and a skill in stripping them of traditional lustres. He had a sprightly fancy, and often amused himself with throwing his meaning into pretty apologues; yet we can hardly ascribe to his mind the poetic element, though his scholarship had made him a reader and quoter of verses. A little more feeling of the poetic significance of his facts would have disqualified him for some of his severer offices to his generation. The old religions have a charm for most minds which it is a little uncanny to disturb. 'T is sometimes a question, shall we not leave them to decay without rude shocks? I remember that I found some harshness in his treament both of Greek and of Hebrew antiquity, and sympathized with the pain of many good people in his auditory, whilst I acquitted him, of course, of any wish to be flippant. He came at a time when, to the irresistible march of opinion, the forms still retained by the most advanced sects showed loose and lifeless, and he, with something less of affectionate attachment to the old, or with more vigorous logic, rejected them. 'T is objected to him that he scattered too many illusions. Perhaps more tenderness would have been graceful; but it is vain to charge him with perverting the opinions of the new generation.

¶ The opinions of men are organic. Simply, those came to him who found themselves expressed by him. And had they not met his enlightened mind, in

which they beheld their own opinions combined with zeal in every cause of love and humanity, they would have suspected their opinions and suppressed them, and so sunk into melancholy or malignity—a feeling of loneliness and hostility to what was reckoned respectable. 'T is plain to me that he has achieved a historic immortality here; that he has so woven himself in these few years into the history of Boston, that he can never be left out of your annals. It will not be in the acts of city councils, nor of obsequious mayors; nor in the state-house, the proclamations of governors, with their failing virtue —failing them at critical moments— that coming generations will study what really befell; but in the plain lessons of Theodore Parker in this Music Hall, in Faneuil Hall, or in legislative committee rooms, that the true temper and authentic record of these days will be read. The next generation will care little for the chances of elections that govern governors now, it will care little for fine gentlemen who behaved shabbily; but it will read very intelligently in his rough story, fortified with exact anecdotes, precise with names and dates, what part was taken by each actor; who threw himself into the cause of humanity and came to the rescue of civilization at a hard pinch, and who blocked its course.

¶ The vice charged against America is the want of sincerity in leading men. It does not lie at his door. He never kept back the truth for fear to make an enemy. But, on the other hand, it was complained that he was bitter and harsh, that his zeal burned with too hot a flame. It is so difficult, in evil times, to escape this charge! for the faithful preacher most of all. It was his merit, like Luther, Knox and Latimer, and John Baptist, to speak tart truth, when that was peremptory and when there were few to say it. But his sympathy for goodness was not less energetic. One fault he had, he overestimated his friends,—I may well say it,—and sometimes vexed them with the importunity of his good opinion, whilst they knew better the ebb which follows unfounded praise. He was capable, it must be said, of the most unmeasured eulogies on those he esteemed, especially if he had any jealousy that they did not stand with the Boston public as highly as they ought. His commanding merit as a reformer is this, that he insisted beyond all men in pulpits—I cannot think of one rival—that the essence of Christianity is its practical morals; it is there for use, or it is nothing; and if you combine it with sharp trading, or with ordinary city ambitions to gloze over municipal corruptions, or private intemperance, or successful fraud, or immoral politics, or unjust wars, or the cheating of Indians, or the robbery of frontier nations, or leaving your principles at home to follow on the high seas or in Europe a supple complaisance to tyrants,—it is a hypocrisy, and the truth is not in you; and no love of religious music or of dreams of Swedenborg, or praise of John Wesley, or of Jeremy Taylor, can save you from the Satan which you are.

HIS commanding merit as a reformer is this, that he insisted beyond all men in pulpits—I cannot think of one rival—that the essence of Christianity is its practical morals; it is there for use, or it is nothing.

¶ His ministry fell on a political crisis also; on the years when Southern slavery broke over its old banks, made new and vast pretensions, and wrung from the weakness or treachery of Northern people fatal concessions in the Fugitive Slave Bill and the repeal of

the Missouri Compromise. Two days, bitter in the memory of Boston, the days of the rendition of Sims and of Burns, made the occasion of his most remarkable discourses. He kept nothing back. In terrible earnest he denounced the public crime, and meted out to every official, high and low, his due portion. By the incessant power of his statement, he made and held a party. It was his great service to freedom. He took away the reproach of silent consent that would otherwise have lain against the indignant minority, by uttering in the hour and place wherein these outrages were done, the stern protest.

¶ But whilst I praise this frank speaker, I have no wish to accuse the silence of others. There are men of good powers who have so much sympathy that they must be silent when they are not in sympathy. If you don't agree with them, they know they only injure the truth by speaking. Their faculties will not play them true, and they do not wish to squeak and gibber, and so they shut their mouths. I can readily forgive this, only not the other, the false tongue which makes the worse appear the better cause. There were, of course, multitudes to censure and defame this truth-speaker. But the brave know the brave. Fops, whether in hotels or churches, will utter the fop's opinion, and faintly hope for the salvation of his soul; but his manly enemies, who despised the fops, honored him; and it is well known that his great hospitable heart was the sanctuary to which every soul conscious of an earnest opinion came for sympathy—alike the brave slave-holder and the brave slave-rescuer. These met in the house of this honest man—for every sound heart loves a responsible person, one who does not in generous company say generous things, and in mean company base things, but says one thing, now cheerfully, now indignantly, but always because he must, and because he sees that, whether he speak or refrain from speech, this is said over him; and history, nature and all souls testify to the same.

¶ Ah, my brave brother! it seems as if, in a frivolous age, our loss were immense, and your place cannot be supplied. But you will already be consoled in the transfer of your genius, knowing well that the nature of the world will affirm to all men, in all times, that which for twenty-five years you valiantly spoke; that the winds of Italy murmur the same truth over your grave; the winds of America over these bereaved streets; that the sea which bore your mourners home affirms it, the stars in their courses, and the inspirations of youth; whilst the polished and pleasant traitors to human rights, with perverted learning and disgraced graces, rot and are forgotten with their double tongue saying all that is sordid for the corruption of man.

¶ The sudden and singular eminence of Mr. Parker, the importance of his name and influence, are the verdict of his country to his virtues. We have few such men to lose; amiable and blameless at home, feared abroad as the standard-bearer of liberty, taking all the duties he could grasp, and more, refusing to spare himself, he has gone down in early glory to his grave, to be a living and enlarging power, wherever learning, wit, honest valor and independence are honored.

American Civilization

USE, labor of each for all, is the health and virtue of all beings. *Ich dien*, I serve, is a truly royal motto. And it is the mark of nobleness to volunteer the lowest service, the greatest spirit only attaining to humility. Nay, God is God because he is the servant of all. Well, now here comes this conspiracy of slavery,—they call it an institution, I call it a destitution,—this stealing of men and setting them to work, stealing their labor, and the thief sitting idle himself; and for two or three ages it has lasted, and has yielded a certain quantity of rice, cotton and sugar. And, standing on this doleful experience, these people have endeavored to reverse the natural sentiments

of mankind, and to pronounce labor disgraceful, and the well-being of a man to consist in eating the fruit of other men's labor. Labor: a man coins himself into his labor; turns his day, his strength, his thought, his affection into some product which remains as the visible sign of his power; and to protect that, to secure that to him, to secure his past self to his future self, is the object of all government. There is no interest in any country so imperative as that of labor; it covers all, and constitutions and governments exist for that,—to protect and insure it to the laborer. All honest men are daily striving to earn their bread by their industry. And who is this who tosses his empty head at this blessing in disguise, the constitution of human nature, and calls labor vile, and insults the faithful workman at his daily toil? I see for such madness no hellebore,—for such calamity no solution but servile war and the Africanization of the country that permits it.

AMERICA is another word for Opportunity. Our whole history appears like a last effort of the Divine Providence in behalf of the human race.

¶ At this moment in America the aspects of political society absorb attention. In every house, from Canada to the Gulf, the children ask the serious father,—"What is the news of the war to-day, and when will there be better times?" The boys have no new clothes, no gifts, no journeys; the girls must go without new bonnets; boys and girls find their education, this year, less liberal and complete. All the little hopes that heretofore made the year pleasant are deferred. The state of the country fills us with anxiety and stern duties. We have attempted to hold together two states of civilization: a higher state, where labor and the tenure of land and the right of suffrage are democratical; and a lower state, in which the old military tenure of prisoners or slaves, and of power and land in a few hands, makes an oligarchy: we have attempted to hold these two states of society under one law. But the rude and early state of society does not work well with the later, nay, works badly, and has poisoned politics, public morals and social intercourse in the Republic, now for many years.

¶ The times put this question, Why cannot the best civilization be extended over the whole country, since the disorder of the less-civilized portion menaces the existence of the country? Is this secular progress we have described, this evolution of man to the highest powers, only to give him sensibility, and not to bring duties with it? Is he not to make his knowledge practical? to stand and to withstand? Is not civilization heroic also? Is it not for action? has it not a will? "There are periods," said Niebuhr, "when something much better than happiness and security of life is attainable." We live in a new and exceptionable age. America is another word for Opportunity. Our whole history appears like a last effort of the Divine Providence in behalf of the human race; and a literal, slavish following of precedents, as by a justice of the peace, is not for those who at this hour lead the destinies of this people. The evil you contend with has taken alarming proportions, and you still content yourself with parrying the blows it aims, but, as if enchanted, abstain from striking at the cause.

¶ If the American people hesitate, it is not for want of warning or advices. The telegraph has been swift enough to announce our disasters. The journals

have not suppressed the extent of the calamity. Neither was there any want of argument or of experience. If the war brought any surprise to the North, it was not the fault of sentinels on the watch-tower, who had furnished full details of the designs, the muster and the means of the enemy. Neither was anything concealed of the theory or practice of slavery. To what purpose make more big books of these statistics? There are already mountains of facts, if any one wants them. But people do not want them. They bring their opinion into the world. If they have a comatose tendency in the brain, they are pro-slavery while they live; if of a nervous sanguineous temperament, they are abolitionists. Then interests were never persuaded. Can you convince the shoe interest, or the iron interest, or the cotton interest, by reading passages from Milton or Montesquieu? You wish to satisfy people that slavery is bad economy. Why, the Edinburgh Review pounded on that string, and made out its case, forty years ago. A democratic statesman said to me, long since, that, if he owned the state of Kentucky, he would manumit all the slaves, and be a gainer by the transaction. Is this new? No, everybody knows it. As a general economy it is admitted. But there is no one owner of the state, but a good many small owners. One man owns land and slaves; another owns slaves only. Here is a woman who has no other property,—like a lady in Charleston I knew of, who owned fifteen sweeps and rode in her carriage. It is clearly a vast inconvenience to each of these to make any change, and they are fretful and talkative, and all their friends are; and those less interested are inert, and, from want of thought, averse to innovation. It is like free trade, certainly the interest of nations, but by no means the interest of certain towns and districts, which tariff feeds fat; and the eager interest of the few overpowers the apathetic general conviction of the many. Banknotes rob the public, but are such a daily convenience that we silence our scruples and make believe they are gold. So imposts are the cheap and right taxation, but, by the dislike of people to pay out a direct tax, governments are forced to render life costly by making them pay twice as much, hidden in the price of tea and sugar.

LABOR: a man coins himself into his labor; turns his day, his strength, his thought, his affection into some product which remains as the visible sign of his power; and to protect that, to secure that to him, to secure his past self to his future self, is the object of all government.

¶ In this national crisis, it is not argument that we want, but that rare courage which dares commit itself to a principle, believing that Nature is its ally, and will create the instruments it requires, and more than make good any petty and injurious profit which it may disturb. There never was such a combination as this of ours, and the rules to meet it are not set down in any history. We want men of original perception and original action, who can open their eyes wider than to a nationality, namely, to considerations of benefit to the human race, can act in the interest of civilization. Government must not be a parish clerk, a justice of the peace. It has, of necessity, in any crisis of the state, the absolute powers of a dictator. The existing administration is entitled to the utmost candor. It is to be thanked for its angelic virtue, compared with any executive experiences with which we have been familiar. But the times will not allow us to indulge in compliment. I wish I saw in the people that inspiration which, if government would not obey the same, would

leave the government behind and create on the moment the means and executors it wanted. Better the war should more dangerously threaten us,—should threaten fracture in what is still whole, and punish us with burned capitals and slaughtered regiments, and so exasperate the people to energy, exasperate our nationality. There are Scriptures written invisibly on men's hearts, whose letters do not come out until they are enraged. They can be read by war-fires, and by eyes in the last peril.

¶ We cannot but remember that there have been days in American history, when, if the free states had done their duty, slavery had been blocked by an immovable barrier, and our recent calamities forever precluded. The free states yielded, and every compromise was surrender and invited new demands. Here again is a new occasion which heaven offers to sense and virtue. It looks as if we held the fate of the fairest possession of mankind in our hands, to be saved by our firmness or to be lost by hesitation.

¶ The one power that has legs long enough and strong enough to wade across the Potomac offers itself at this hour; the one strong enough to bring all the civility up to the height of that which is best, prays now at the door of Congress for leave to move. Emancipation is the demand of civilization. That is a principle; everything else is an intrigue. This is a progressive policy, puts the whole people in healthy, productive, amiable position, puts every man in the South in just and natural relations with every man in the North, laborer with laborer.

¶ I shall not attempt to unfold the details of the project of emancipation. It has been stated with great ability by several of its leading advocates. I will only advert to some leading points of the argument, at the risk of repeating the reasons of others. The war is welcome to the Southerner; a chivalrous sport to him, like hunting, and suits his semi-civilized condition. On the climbing scale of progress, he is just up to war, and has never appeared to such advantage as in the last twelvemonth. It does not suit us. We are advanced some ages on the war-state,—to trade, art and general cultivation. His laborer works for him at home, so that he loses no labor by the war. All our soldiers are laborers; so that the South, with its inferior numbers, is almost on a footing in effective war-population with the North. Again, as long as we fight without any affirmative step taken by the government, any word intimating forfeiture in the rebel states of their old privileges under the law, they and we fight on the same side, for slavery. Again, if we conquer the enemy,—what then? We shall still have to keep him under, and it will cost as much to hold him down as it did to get him down. Then comes the summer, and the fever will drive the soldiers home; next winter we must begin at the beginning, and conquer him over again. What use then to take a fort, or a privateer, or get possession of an inlet, or to capture a regiment of rebels?

FREE trade is certainly the interest of nations, but by no means the interest of certain towns and districts, which tariff feeds fat; and the eager interest of the few overpowers the apathetic general conviction of the many.

¶ But one weapon we hold which is sure. Congress can, by edict, as a part of the military defence which it is the duty of Congress to provide, abolish slavery, and pay for such slaves as we ought to pay for. Then the slaves near our armies will come to us; those in the interior will know in a week what their

rights are, and will, where opportunity offers, prepare to take them. Instantly, the armies that now confront you must run home to protect their estates, and must stay there, and your enemies will disappear.

¶ There can be no safety until this step is taken. We fancy that the endless debate, emphasized by the crime and by the cannons of this war, has brought the free states to some conviction that it can never go well with us whilst this mischief of slavery remains in our politics, and that by concert or by might we must put an end to it. But we have too much experience of the futility of an easy reliance on the momentary good dispositions of the public. There does exist, perhaps, a popular will that the Union shall not be broken,—that our trade, and therefore our laws, must have the whole breadth of the continent, and from Canada to the Gulf. But since this is the rooted belief and will of the people, so much the more are they in danger, when impatient of defeats, or impatient of taxes, to go with a rush for some peace; and what kind of peace shall at that moment be easiest attained, they will make concessions for it,—will give up the slaves, and the whole torment of the past half-century will come back to be endured anew.

¶ Neither do I doubt, if such a composition should take place, that the Southerners will come back quietly and politely, leaving their haughty dictation. It will be an era of good feelings. There will be a lull after so loud a storm; and, no doubt, there will be discreet men from that section who will earnestly strive to inaugurate more moderate and fair administration of the government, and the North will for a time have its full share and more, in place and counsel. But this will not last;—not for want of sincere good will in sensible Southerners, but because Slavery will again speak through them its harsh necessity. It cannot live but by injustice, and it will be unjust and violent to the end of the world.

¶ The power of Emancipation is this, that it alters the atomic social constitution of the Southern people. Now, their interest is in keeping out white labor; then, when they must pay wages, their interest will be to let it in, to get the best labor, and, if they fear their blacks, to invite Irish, German and American laborers. Thus, whilst Slavery makes and keeps disunion, Emancipation removes the whole objection to union. Emancipation at one stroke elevates the poor-white of the South, and identifies his interest with that of the Northern laborer.

¶ Now, in the name of all that is simple and generous, why should not this great right be done? Why should not America be capable of a second stroke for the well-being of the human race, as eighty or ninety years ago she was for the first,—of an affirmative step in the interests of human civility, urged on her, too, not by any romance of sentiment, but by her own extreme perils? It is very certain that the statesman who shall break through the cobwebs of doubt, fear and petty cavil that lie in the way, will be greeted by the unanimous thanks of mankind. Men reconcile themselves very fast to a bold and good measure when once it is taken, though they condemned it in advance. A week before the two captive commissioners were surrendered to England, every one thought it could not be done: it would divide the North. It was done, and in two days all agreed it was the right action. And this action, which costs so little (the parties injured by it being such a handful that they can very easily be indemnified), rids the world, at one stroke, of this degrading nuisance, the cause of war and ruin to nations. This measure at once puts all parties right. This is borrowing, as I said, the omnipotence of a principle. What is so foolish as the terror lest the blacks should be made furious by freedom and wages? It is denying these that is the outrage, and makes the danger from the blacks. But justice satisfies everybody, —white man, red man, yellow man and black man. All like wages, and the appetite grows by feeding.

¶ But this measure, to be effectual, must come speedily. The weapon is slipping out of our hands. "Time," say the Indian Scriptures, "drinketh up the essence of every great and noble action which ought to be performed, and which is delayed in the execution."

¶ I hope it is not a fatal objection to this policy that it is simple and beneficent thoroughly, which is the tribute of a moral action. An unprecedented material prosperity has not tended to make us Stoics or Christians. But the laws by which the universe is organized reappear at every point, and will rule it. The end of all political struggle is to establish morality as the basis of all legislation. It is not free institutions, it is not a republic, it is not a democracy, that is the end,—no, but only the means. Morality is the object of government. We want a state of things in which crime shall not pay. This is the consolation on which we rest in the darkness of the future and the afflictions of to-day, that the government of the world is moral, and does forever destroy what is not. It is the maxim of natural philosophers that the natural forces wear out in time all obstacles, and take place: and it is the maxim of history that victory always falls at last where it ought to fall; or, there is perpetual march and progress to ideas. But in either case, no link of the chain can drop out. Nature works through her appointed elements; and ideas must work through the brains and the arms of good and brave men, or they are no better than dreams.

¶ Since the above pages were written, President Lincoln has proposed to Congress that the government shall cooperate with any state that shall enact a gradual abolishment of slavery. In the recent series of national successes, this message is the best. It marks the happiest day in the political year. The American Executive ranges itself for the first time on the side of freedom. If Congress has been backward, the President has advanced. This state-paper is the more interesting that it appears to be the President's individual act, done under a strong sense of duty. He speaks his own thought in his own style. All thanks and honor to the Head of the State! The message has been received throughout the country with praise, and, we doubt not, with more pleasure than has been spoken. If Congress accords with the President, it is not yet too late to begin the emancipation; but we think it will always be too late to make it gradual. All experience agrees that it should be immediate. More and better than the President has spoken shall, perhaps, the effect of this message be,—but, we are sure, not more or better than he hoped in his heart, when, thoughtful of all the complexities of his position, he penned these cautious words.

The Emancipation Proclamation

IN so many arid forms which states encrust themselves with, once in a century, if so often, a poetic act and record occur. These are the jets of thought into affairs, when, roused by danger or inspired by genius, the political leaders of the day break the else insurmountable routine of class and local legislation, and take a step forward in the direction of catholic and universal interests. Every step in the history of political liberty is a sally of the human mind into the untried Future, and has the interest of genius, and is fruitful in heroic anecdotes. Liberty is a slow fruit. It comes, like religion, for short periods, and in rare conditions, as if awaiting a culture of the race which shall make it organic and permanent. Such moments of expansion in modern history were the Confession of Augsburg, the plantation of America, the English Commonwealth of 1648, the Declaration of American Independence in 1776, the British emancipation of slaves in the West Indies, the passage of the Reform Bill, the repeal of the Corn-Laws, the Magnetic Ocean Telegraph, though yet imperfect, the passage of the Homestead Bill in the last Congress, and now, eminently, President Lincoln's Proclamation on the

twenty-second of September. These are acts of great scope, working on a long future and on permanent interests, and honoring alike those who initiate and those who receive them. These measures provoke no noisy joy, but are received into a sympathy so deep as to apprise us that mankind are greater and better than we know. At such times it appears as if a new public were created to greet the new event. It is as when an orator, having ended the compliments and pleasantries with which he conciliated attention, and having run over the superficial fitness and commodities of the measure he urges, suddenly, lending himself to some happy inspiration, announces with vibrating voice the grand human principles involved;—the bravos and wits who greeted him loudly thus far are surprised and overawed; a new audience is found in the heart of the assembly,—an audience hitherto passive and unconcerned, now at last so searched and kindled that they come forward, every one a representative of mankind, standing for all nationalities.

¶ The extreme moderation with which the President advanced to his design,—his long-avowed expectant policy, as if he chose to be strictly the executive of the best public sentiment of the country, waiting only till it should be unmistakably pronounced,—so fair a mind that none ever listened so patiently to such extreme varieties of opinion,—so reticent that his decision has taken all parties by surprise, whilst yet it is just the sequel of his prior acts,—the firm tone in which he announces it, without inflation or surplusage,—all these have bespoken such favor to the act that, great as the popularity of the President has been, we are beginning to think that we have underestimated the capacity and virtue which the Divine Providence has made an instrument of benefit so vast. He has been permitted to do more for America than any other American man. He is well entitled to the most indulgent construction. Forget all that we thought shortcomings, every mistake, every delay. In the extreme embarrassments of his part, call these endurance, wisdom, magnanimity; illuminated, as they now are, by this dazzling success.

¶ When we consider the immense opposition that has been neutralized or converted by the progress of the war (for it is not long since the President anticipated the resignation of a large number of officers in the army, and the secession of three states, on the promulgation of this policy),—when we see how the great stake which foreign nations hold in our affairs has recently brought every European power as a client into this court, and it became every day more apparent what gigantic and what remote interests were to be affected by the decision of the President,—one can hardly say the deliberation was too long. Against all timorous counsels he had the courage to seize the moment; and such was his position, and such the felicity attending the action, that he has replaced government in the good graces of mankind. "Better is virtue in the sovereign than plenty in the season," say the Chinese. 'T is wonderful what power is, and how ill it is used, and how its ill use makes life mean, and the sunshine dark. Life in America had lost much of its attraction in the later years. The virtues of a good magistrate undo a world of mischief, and, because Nature works with rectitude, seem vastly more potent than the acts of bad governors, which are ever tempered by the good nature in the people, and the incessant resistance which fraud and violence encounter. The acts of good governors work a geometrical ratio, as one midsummer day seems to repair the damage of a year of war.

¶ A day which most of us dared not hope to see, an event worth the dreadful war, worth its costs and uncertainties, seems now to be close before us. October, November, December will have passed over beating hearts and plotting brains: then the hour will strike, and all men of African descent who have faculty enough to find their way to our lines are assured of the protection of American law.

¶ It is by no means necessary that this measure should be suddenly marked by

any signal results on the negroes or on the rebel masters. The force of the act is that it commits the country to this justice,—that it compels the innumerable officers, civil, military, naval, of the Republic to range themselves on the line of this equity. It draws the fashion to this side. It is not a measure that admits of being taken back. Done, it cannot be undone by a new administration. For slavery overpowers the disgust of the moral sentiment only through immemorial usage. It cannot be introduced as an improvement of the nineteenth century. This act makes that the lives of our heroes have not been sacrificed in vain. It makes a victory of our defeats. Our hurts are healed; the health of the nation is repaired. With a victory like this, we can stand many disasters. It does not promise the redemption of the black race; that lies not with us: but it relieves it of our opposition. The President by this act has paroled all the slaves in America; they will no more fight against us: and it relieves our race once for all of its crime and false position. The first condition of success is secured in putting ourselves right. We have recovered ourselves from our false position, and planted ourselves on a law of Nature:—

> "If that fail,
> The pillared firmament is rottenness,
> And earth's base built on stubble."

The government has assured itself of the best constituency in the world: every spark of intellect, every virtuous feeling, every religious heart, every man of honor, every poet, every philosopher, the generosity of the cities, the health of the country, the strong arms of the mechanic, the endurance of farmers, the passionate conscience of women, the sympathy of distant nations,—all rally to its support.

EVERY step in the history of political liberty is a sally of the human mind into the untried Future. Liberty is a slow fruit. It comes, like religion, for short periods, and in rare conditions.

¶ Of course, we are assuming the firmness of the policy thus declared. It must not be a paper proclamation. We confide that Mr. Lincoln is in earnest, and as he has been slow in making up his mind, has resisted the importunacy of parties and of events to the latest moment, he will be as absolute in his adhesion. Not only will he repeat and follow up his stroke, but the nation will add its irresistible strength. If the ruler has duties, so has the citizen. In times like these, when the nation is imperilled, what man can, without shame, receive good news from day to day without giving good news of himself? What right has any one to read in the journals tidings of victories, if he has not bought them by his own valor, treasure, personal sacrifice, or by service as good in his own department? With this blot removed from our national honor, this heavy load lifted off the national heart, we shall not fear henceforward to show our faces among mankind. We shall cease to be hypocrites and pretenders, but what we have styled our free institutions will be such.

¶ In the light of this event the public distress begins to be removed. What if the brokers' quotations show our stocks discredited, and the gold dollar costs one hundred and twenty-seven cents? These tables are fallacious. Every acre in the free states gained substantial value on the twenty-second of September. The cause of disunion and war has been reached and begun to be removed. Every man's house-lot and garden are relieved of the malaria which the purest winds and strongest sunshine could not pene-

trate and purge. The territory of the Union shines to-day with a lustre which every European emigrant can discern from far; a sign of inmost security and permanence. Is it feared that taxes will check immigration? That depends on what the taxes are spent for. If they go to fill up this yawning Dismal Swamp, which engulfed armies and populations, and created plague, and neutralized hitherto all the vast capabilities of this continent,—then this taxation, which makes the land wholesome and habitable, and will draw all men unto it, is the best investment in which property-holder ever lodged his earnings.

¶ Whilst we have pointed out the opportuneness of the Proclamation, it remains to be said that the President had no choice. He might look wistfully for what variety of courses lay open to him; every line but one was closed up with fire. This one, too, bristled with danger, but through it was the sole safety. The measure he has adopted was imperative. It is wonderful to see the unseasonable senility of what is called the Peace Party, through all its masks, blinding their eyes to the main feature of the war, namely, its inevitableness. The war existed long before the cannonade of Sumter, and could not be postponed. It might have begun otherwise or elsewhere, but war was in the minds and bones of the combatants, it was written on the iron leaf, and you might as easily dodge gravitation. If we had consented to a peaceable secession of the rebels, the divided sentiment of the border states made peaceable secession impossible, the insatiable temper of the South made it impossible, and the slaves on the border, wherever the border might be, were an incessant fuel to rekindle the fire. Give the Confederacy New Orleans, Charleston, and Richmond, and they would have demanded St. Louis and Baltimore. Give them these, and they would have insisted on Washington. Give them Washington, and they would have assumed the army and navy, and, through these, Philadelphia, New York, and Boston. It looks as if the battle-field would have been at least as large in that event as it is now. The war was formidable, but could not be avoided. The war was and is an immense mischief, but brought with it the immense benefit of drawing a line and rallying the free states to fix it impassably,—preventing the whole force of Southern connection and influence throughout the North from distracting every city with endless confusion, detaching that force and reducing it to handfuls, and, in the progress of hostilities, disinfecting us of our habitual proclivity, through the affection of trade and the traditions of the Democratic party, to follow Southern leading.

¶ These necessities which have dictated the conduct of the federal government are overlooked especially by our foreign critics. The popular statement of the opponents of the war abroad is the impossibility of our success. "If you could add," say they, "to your strength the whole army of England, of France and of Austria, you could not coerce eight millions of people to come under this government against their will." This is an odd thing for an Englishman, a Frenchman or an Austrian to say, who remembers Europe of the last seventy years,—the condition of Italy, until 1859,—of Poland, since 1793,—of France, of French Algiers,—of British Ireland, and British India. But granting the truth, rightly read, of the historical aphorism, that "the people always conquer," it is to be noted that, in the Southern States, the tenure of land and the local laws, with slavery, give the social system not a democratic but an aristocratic complexion; and those states have shown every year a more hostile and aggressive temper, until the instinct of self-preservation forced us into the war. And the aim of the war on our part is indicated by the aim of the President's Proclamation, namely, to break up the false combination of Southern society, to destroy the piratic feature in it which makes it our enemy only as it is the enemy of the human race, and so allow its reconstruction on a just and healthful basis. Then new affinities will act, the old repulsion will cease, and, the cause

of war being removed. Nature and trade may be trusted to establish a lasting peace.

¶ We think we cannot overstate the wisdom and benefit of this act of the government. The malignant cry of the Secession press within the free states, and the recent action of the Confederate Congress, are decisive as to its efficiency and correctness of aim. Not less so is the silent joy which has greeted it in all generous hearts, and the new hope it has breathed into the world. It was well to delay the steamers at the wharves until this edict could be put on board. It will be an insurance to the ship as it goes plunging through the sea with glad tidings to all people. Happy are the young, who find the pestilence cleansed out of the earth, leaving open to them an honest career. Happy the old, who see Nature purified before they depart. Do not let the dying die: hold them back to this world, until you have charged their ear and heart with this message to other spiritual societies, announcing the melioration of our planet:—

"Incertainties now crown themselves assured,
And Peace proclaims olives of endless age."

¶ Meantime that ill-fated, much-injured race which the Proclamation respects will lose somewhat of the dejection sculptured for ages in their bronzed countenance, uttered in the wailing of their plaintive music,—a race naturally benevolent, docile, industrious, and whose very miseries sprang from their great talent for usefulness, which, in a more moral age, will not only defend their independence, but will give them a rank among nations.

LINCOLN is in earnest. He will be absolute in his adhesion. Not only will he repeat and follow up his stroke, but the nation will add its irresistible strength.

Abraham Lincoln

WE meet under the gloom of a calamity which darkens down over the minds of good men in all civil society, as the fearful tidings travel over sea, over land, from country to country, like the shadow of an uncalculated eclipse over the planet. Old as history is, and manifold as are its tragedies, I doubt if any death has caused so much pain to mankind as this has caused, or will cause, on its announcement; and this, not so much because nations are by modern arts brought so closely together, as because of the mysterious hopes and fears which, in the present day, are connected with the name and institutions of America.

¶ In this country, on Saturday, every one was struck dumb, and saw at first only deep below deep, as he meditated on the ghastly blow. And perhaps, at this hour, when the coffin which contains the dust of the President sets forward on its long march through mourning states, on its way to his home in Illinois, we might well be silent, and suffer the awful voices of the time to thunder to us. Yes, but that first despair was brief: the man was not so to be mourned. He was the most active and hopeful of men; and his work had not perished: but acclamations of praise for the task he had accomplished burst out into a song of triumph, which even tears for his death cannot keep down.

¶ The President stood before us as a man of the people. He was thoroughly American, had never crossed the sea, had never been spoiled by English insularity or French dissipation; a quite native, aboriginal man, as an acorn from the oak; no aping of foreigners, no frivo-

lous accomplishments, Kentuckian born, working on a farm, a flatboatman, a captain in the Black Hawk War, a country lawyer, a representative in the rural legislature of Illinois;—on such modest foundations the broad structure of his fame was laid. How slowly, and yet by happily prepared steps, he came to his place. All of us remember—it is only a history of five or six years—the surprise and the disappointment of the country at his first nomination by the convention at Chicago. Mr. Seward, then in the culmination of his good fame, was the favorite of the Eastern States. And when the new and comparatively unknown name of Lincoln was announced (notwithstanding the report of the acclamations of that convention), we heard the result coldly and sadly. It seemed too rash, on a purely local reputation, to build so grave a trust in such anxious times; and men naturally talked of the chances in politics as incalculable. But it turned out not to be chance. The profound good opinion which the people of Illinois and of the West had conceived of him, and which they had imparted to their colleagues, that they also might justify themselves to their constituents at home, was not rash, though they did not begin to know the riches of his worth.

¶ A plain man of the people, an extraordinary fortune attended him. He offered no shining qualities at the first encounter; he did not offend by superiority. He had a face and manner which disarmed suspicion, which inspired confidence, which confirmed good will. He was a man without vices. He had a strong sense of duty, which it was very easy for him to obey. Then, he had what farmers call a long head; was excellent in working out the sum for himself; in arguing his case and convincing you fairly and firmly. Then, it turned out that he was a great worker; had prodigious faculty of performance; worked easily. A good worker is so rare; everybody has some disabling quality. In a host of young men that start together and promise so many brilliant leaders for the next age, each fails on trial; one by bad health, one by conceit, or by love of pleasure, or lethargy, or an ugly temper,—each has some disqualifying fault that throws him out of the career. But this man was sound to the core, cheerful, persistent, all right for labor, and liked nothing so well.

¶ Then, he had a vast good nature, which made him tolerant and accessible to all; fair-minded, leaning to the claim of the petitioner; affable, and not sensible to the affliction which the innumerable visits paid to him when President would have brought to any one else. And how this good nature became a noble humanity, in many a tragic case which the events of the war brought to him, every one will remember; and with what increasing tenderness he dealt when a whole race was thrown on his compassion. The poor negro said of him, on an impressive occasion, "Massa Linkum am eberywhere."

¶ Then his broad good humor, running easily into jocular talk, in which he delighted and in which he excelled, was a rich gift to this wise man. It enabled him to keep his secret; to meet every kind of man and every rank in society; to take off the edge of the severest decisions; to mask his own purpose and sound his companion; and to catch with true instinct the temper of every company he addressed. And, more than all, it is to a man of severe labor, in anxious and exhausting crises, the natural restorative, good as sleep, and is the protection of the overdriven brain against rancor and insanity.

¶ He is the author of a multitude of good sayings, so disguised as pleasantries that it is certain they had no reputation at first but as jests; and only later, by the very acceptance and adoption they find in the mouths of millions, turn out to be the wisdom of the hour. I am sure if this man had ruled in a period of less facility of printing, he would have become mythological in a very few years, like Æsop or Pilpay, or one of the Seven Wise Masters, by his fables and proverbs. But the weight and penetration of many passages in his letters, messages and speeches, hidden now

by the very closeness of their application to the moment, are destined hereafter to wide fame. What pregnant definitions; what unerring common sense; what foresight; and, on great occasion, what lofty, and more than national, what humane tone! His brief speech at Gettysburg will not easily be surpassed by words on any recorded occasion. This, and one other American speech, that of John Brown to the court that tried him, and a part of Kossuth's speech at Birmingham, can only be compared with each other, and with no fourth.

¶ His occupying the chair of state was a triumph of the good sense of mankind, and of the public conscience. This middle-class country had got a middle-class president, at last. Yes, in manners and sympathies, but not in powers, for his powers were superior. This man grew according to the need. His mind mastered the problem of the day; and as the problem grew, so did his comprehension of it. Rarely was man so fitted to the event. In the midst of fears and jealousies, in the Babel of counsels and parties, this man wrought incessantly with all his might and all his honesty, laboring to find what the people wanted, and how to obtain that. It cannot be said there is any exaggeration of his worth. If ever a man was fairly tested, he was. There was no lack of resistance, nor of slander, nor of ridicule. The times have allowed no state secrets; the nation has been in such ferment, such multitudes had to be trusted, that no secret could be kept. Every door was ajar, and we know all that befell.

¶ Then, what an occasion was the whirlwind of the war. Here was place for no holiday magistrate, no fair-weather sailor; the new pilot was hurried to the helm in a tornado. In four years,—four years of battle-days,—his endurance, his fertility of resources, his magnanimity, were sorely tried and never found wanting. There, by his courage, his justice, his even temper, his fertile counsel, his humanity, he stood a heroic figure in the centre of a heroic epoch. He is the true history of the American people in his time. Step by step he walked before them; slow with their slowness, quickening his march by theirs, the true representative of this continent; an entirely public man; father of his country, the pulse of twenty millions throbbing in his heart, the thought of their minds articulated by his tongue.

BY his courage, his justice, his even temper, his fertile counsel, his humanity, Lincoln stood a heroic figure in the centre of a heroic epoch. He is the true history of the American people in his time: the pulse of twenty millions throbbing in his heart, the thought of their minds articulated by his tongue.

¶ Adam Smith remarks that the axe, which in Houbraken's portraits of British kings and worthies is engraved under those who have suffered at the block, adds a certain lofty charm to the picture. And who does not see, even in this tragedy so recent, how fast the terror and ruin of the massacre are already burning into glory around the victim? Far happier this fate than to have lived to be wished away; to have watched the decay of his own faculties; to have seen—perhaps even he—the proverbial ingratitude of statesmen; to have seen mean men preferred. Had he not lived long enough to keep the greatest promise that ever man made to his fellow men,—the practical abolition of slavery? He had seen Tennessee, Missouri and Maryland emancipate their slaves. He had seen Savannah, Charleston and Richmond surrender; had seen the main army of the rebellion lay down its arms. He had conquered the public opinion of Canada, England and France. Only Washington can compare with him in fortune.

¶ And what if it should turn out, in the unfolding of the web, that he had reached the term; that this heroic deliverer could no longer serve us; that the rebellion had touched its natural conclusion, and what remained to be done required new and uncommitted hands,—a new spirit born out of the ashes of the war; and that Heaven, wishing to show the world a completed benefactor, shall make him serve his country even more by his death than by his life? Nations, like kings, are not good by facility and complaisance. "The kindness of kings consists in justice and strength." Easy good nature has been the dangerous foible of the Republic, and it was necessary that its enemies should outrage it, and drive us to unwonted firmness, to secure the salvation of this country in the next ages.

¶ The ancients believed in a serene and beautiful Genius which ruled in the affairs of nations; which, with a slow but stern justice, carried forward the fortunes of certain chosen houses, weeding out single offenders or offending families, and securing at last the firm prosperity of the favorites of Heaven. It was too narrow a view of the Eternal Nemesis. There is a serene Providence which rules the fate of nations, which makes little account of time, little of one generation or race, makes no account of disasters, conquers alike by what is called defeat or by what is called victory, thrusts aside enemy and obstruction, crushes everything immoral as inhuman, and obtains the ultimate triumph of the best race by the sacrifice of everything which resists the moral laws of the world. It makes its own instruments, creates the man for the time, trains him in poverty, inspires his genius, and arms him for his task. It has given every race its own talent, and ordains that only that race which combines perfectly with the virtues of all shall endure.

Harvard Commemoration Speech

MR. CHAIRMAN, AND GENTLEMEN: With whatever opinion we come here, I think it is not in man to see, without a feeling of pride and pleasure, a tried soldier, the armed defender of the right. I think that in these last years all opinions have been affected by the magnificent and stupendous spectacle which Divine Providence has offered us of the energies that slept in the children of this country,—that slept and have awakened. I see thankfully those that are here, but dim eyes in vain explore for some who are not.

¶ The old Greek Heraclitus said, "War is the Father of all things." He said it, no doubt, as science, but we of this day can repeat it as political and social truth. War passes the power of all chemical solvents, breaking up the old adhesions, and allowing the atoms of society to take a new order. It is not the Government, but the War, that has appointed the good generals, sifted out the pedants, put in the new and vigorous blood. The War has lifted many other people besides Grant and Sherman into their true places. Even Divine Providence, we may say, always seems to work after a certain military necessity. Every nation punishes the General who is not victorious. It is a rule in games of chance that the cards beat all the players, and revolutions disconcert and outwit all the insurgents.

¶ The revolutions carry their own points, sometimes to the ruin of those who set them on foot. The proof that war also is within the highest right, is a marked benefactor in the hands of the Divine Providence, is its *morale*. The war gave back integrity to this erring and immoral nation. It charged with power, peaceful, amiable men, to whose life war and discord were abhorrent. What an infusion of character went out from this and other colleges! What an infusion of character down to the ranks! The experience has been uniform that it is the gentle soul that makes the firm hero after all. It is easy to recall the mood in which our young men, snatched from every peaceful pursuit, went to the war. Many of them had never handled a gun. They said, "It is not in me to resist. I go because I must. It is a duty which I shall never forgive

myself if I decline. I do not know that I can make a soldier. I may be very clumsy. Perhaps I shall be timid; but you can rely on me. Only one thing is certain, I can well die, but I cannot afford to misbehave."

¶ In fact the infusion of culture and tender humanity from these scholars and idealists who went to the war in their own despite—God knows they had no fury for killing their old friends and countrymen—had its signal and lasting effect. It was found that enthusiasm was a more potent ally than science and munitions of war without it. "It is a principle of war," said Napoleon, "that when you can use the thunderbolt you must prefer it to the cannon." Enthusiasm was the thunderbolt. Here in this little Massachusetts, in smaller Rhode Island, in this little nest of New England republics it flamed out when the guilty gun was aimed at Sumter.

¶ Mr. Chairman, standing here in Harvard College, the parent of all the colleges; in Massachusetts, the parent of all the North; when I consider her influence on the country as a principal planter of the Western States, and now, by her teachers, preachers, journalists and books, as well as by traffic and production, the diffuser of religious, literary and political opinion;—and when I see how irresistible the convictions of Massachusetts are in these swarming populations,—I think the little state bigger than I knew. When her blood is up, she has a fist big enough to knock down an empire. And her blood was roused. Scholars changed the black coat for the blue. A single company in the Forty-fourth Massachusetts Regiment contained thirty-five sons of Harvard. You all know as well as I the story of these dedicated men, who knew well on what duty they went,—whose fathers and mothers said of each slaughtered son, "We gave him up when he enlisted." One mother said, when her son was offered the command of the first negro regiment, "If he accepts it, I shall be as proud as if I had heard that he was shot." These men, thus tender, thus high-bred, thus peaceable, were always in the front and always employed. They might say, with their forefathers the old Norse Vikings, "We sung the mass of lances from morning until evening." And in how many cases it chanced, when the hero had fallen, they who came by night to his funeral, on the morrow returned to the war-path to show his slayers the way to death!

¶ Ah! young brothers, all honor and gratitude to you,—you, manly defenders, Liberty's and Humanity's bodyguard! We shall not again disparage America, now that we have seen what men it will bear. We see—we thank you for it—a new era, worth to mankind all the treasure and all the lives it has cost; yes, worth to the world the lives of all this generation of American men, if they had been demanded.

Editor's Address

THE American people are fast opening their own destiny. The material basis is of such extent that no folly of man can quite subvert it; for the territory is a considerable fraction of the planet, and the population neither loath nor inexpert to use their advantages. Add, that this energetic race derive an unprecedented material power from the new arts, from the expansions effected by public schools, cheap postage and a cheap press, from the telescope, the telegraph, the railroad, steamship, steam-ferry, steam-mill; from domestic architecture, chemical agriculture, from ventilation, from ice, ether, caoutchouc, and innumerable inventions and manufactures.

¶ A scholar who has been reading of the fabulous magnificence of Assyria and Persia, of Rome and Constantinople, leaves his library and takes his seat in a railroad-car, where he is importuned by newsboys with journals still wet from Liverpool and Havre, with telegraphic despatches not yet fifty minutes old from Buffalo and Cincinnati. At the screams of the steam-whistle, the train quits city and suburbs, darts away into the interior, drops every man at his estate as it whirls along, and shows our

traveller what tens of thousands of powerful and weaponed men, science-armed and society-armed, sit at large in this ample region, obscure from their numbers and the extent of the domain. He reflects on the power which each of these plain republicans can employ; how far these chains of intercourse and travel reach, interlock and ramify; what levers, what pumps, what exhaustive analyses are applied to Nature for the benefit of masses of men. Then he exclaims, What a negro-fine royalty is that of Jamschid and Solomon! What a substantial sovereignty does my townsman possess! A man who has a hundred dollars to dispose of—a hundred dollars over his bread—is rich beyond the dreams of the Cæsars.

ONE would say there is nothing colossal in the country but its geography. We hearken in vain for any profound voice speaking to the American heart, cheering timid good men, animating the youth, consoling the defeated, and intelligently announcing duties which clothe life with joy, and endear the face of land and sea to men.

¶ Keep our eyes as long as we can on this picture, we cannot stave off the ulterior question,—the famous question of Cineas to Pyrrhus,—the WHERE TO of all this power and population, these surveys and inventions, this taxing and tabulating, mill-privilege, roads, and mines. The aspect this country presents is a certain maniacal activity, an immense apparatus of cunning machinery which turns out, at last, some Nuremberg toys. Has it generated, as great interests do, any intellectual power? Where are the works of the imagination—the surest test of a national genius? At least as far as the purpose and genius of America is yet reported in any book, it is a sterility and no genius.

¶ One would say there is nothing colossal in the country but its geography and its material activities; that the moral and intellectual effects are not on the same scale with the trade and production. There is no speech heard but that of auctioneers, newsboys, and the caucus. Where is the great breath of the New World, the voice of aboriginal nations opening new eras with hymns of lofty cheer? Our books and fine arts are imitations; there is a fatal incuriosity and disinclination in our educated men to new studies and the interrogation of Nature. We have taste, critical talent, good professors, good commentators, but a lack of male energy. What more serious calamity can befall a people than a constitutional dulness and limitation? The moral influence of the intellect is wanting. We hearken in vain for any profound voice speaking to the American heart, cheering timid good men, animating the youth, consoling the defeated, and intelligently announcing duties which clothe life with joy, and endear the face of land and sea to men. It is a poor consideration that the country wit is precocious, and, as we say, practical; that political interests on so broad a scale as ours are administered by little men with some saucy village talent, by deft partisans, good cipherers; strict economists, quite empty of all superstition.

¶ Conceding these unfavorable appearances, it would yet be a poor pedantry to read the fates of this country from these narrow data. On the contrary, we are persuaded that moral and material values are always commensurate. Every material organization exists to a moral end, which makes the reason of its existence. Here are no books, but who can see the continent with its inland and surrounding waters, its temperate climates, its west-wind breathing vigor through all the year, its confluence of races so favorable to the highest energy, and the infinite glut of their production, without putting new queries to Destiny

as to the purpose for which this muster of nations and this sudden creation of enormous values is made?

¶ This is equally the view of science and of patriotism. We hesitate to employ a word so much abused as *patriotism*, whose true sense is almost the reverse of its popular sense. We have no sympathy with that boyish egotism, hoarse with cheering for one side, for one state, for one town: the right patriotism consists in the delight which springs from contributing our peculiar and legitimate advantages to the benefit of humanity. Every foot of soil has its proper quality; the grape on two sides of the same fence has new flavors; and so every acre on the globe, every family of men, every point of climate, has its distinguishing virtues. Certainly then this country does not lie here in the sun causeless; and though it may not be easy to define its influence, men feel already its emancipating quality in the careless self-reliance of the manners, in the freedom of thought, in the direct roads by which grievances are reached and redressed, and even in the reckless and sinister politics, not less than in purer expressions. Bad as it is, this freedom leads onward and upward,—to a Columbia of thought and art, which is the last and endless end of Columbus's adventure.

¶ Lovers of our country, but not always approvers of the public counsels, we should certainly be glad to give good advice in politics. We have not been able to escape our national and endemic habit, and to be liberated from interest in the elections and in public affairs. Nor have we cared to disfranchise ourselves. We are more solicitous than others to make our politics clear and healthful, as we believe politics to be nowise accidental or exceptional, but subject to the same laws with trees, earths and acids. We see that reckless and destructive fury which characterizes the lower classes of American society, and which is pampered by hundreds of profligate presses. The young intriguers who drive in bar-rooms and town-meetings the trade of politics, sagacious only to seize the victorious side, have put the country into the position of an overgrown bully, and Massachusetts finds no heart or head to give weight and efficacy to her contrary judgment. In hours when it seemed only to need one just word from a man of honor to have vindicated the rights of millions, and to have given a true direction to the first steps of a nation, we have seen the best understandings of New England, the trusted leaders of her counsels, constituting a sniveling and despised opposition, clapped on the back by comfortable capitalists from all sections, and persuaded to say, We are too old to stand for what is called a New England sentiment any longer. Rely on us for commercial representatives, but for questions of ethics—who knows what markets may be opened? We are not well, we are not in our seats, when justice and humanity are to be spoken for.

IN the rapid decay of what was called religion, timid and unthinking people fancy a decay of the hope of man. But the health which we call Virtue is an equipoise which easily redresses itself, and resembles those rocking stones which a child's finger can move, and a weight of many hundred tons cannot overthrow.

¶ We have a bad war, many victories, each of which converts the country into an immense chanticleer; and a very insincere political opposition. The country needs to be extricated from its delirium at once. Public affairs are chained in the same law with private; the retributions of armed states are not less sure and signal than those which come to private felons. The facility of majorities is no protection from the natural

sequence of their own acts. Men reason badly, but Nature and Destiny are logical.

¶ But, whilst we should think our pains well bestowed if we could cure the infatuation of statesmen, and should be sincerely pleased if we could give a direction to the Federal politics, we are far from believing politics the primal interest of men. On the contrary, we hold that the laws and governors cannot possess a commanding interest for any but vacant or fanatical people; for the reason that this is simply a formal and superficial interest; and men of a solid genius are only interested in substantial things.

¶ The State, like the individual, should rest on an ideal basis. Not only man but Nature is injured by the imputation that man exists only to be fattened with bread, but he lives in such connection with Thought and Fact that his bread is surely involved as one element thereof, but is not its end and aim. So the insight which commands the laws and conditions of the true polity precludes forever all interest in the squabbles of parties. As soon as men have tasted the enjoyment of learning, friendship and virtue, for which the State exists, the prizes of office appear polluted, and their followers outcasts.

¶ A journal that would meet the real wants of this time must have a courage and power sufficient to solve the problems which the great groping society around us, stupid with perplexity, is dumbly exploring. Let it now show its astuteness by dodging each difficult question and arguing diffusely every point on which men are long ago unanimous. Can it front this matter of Socialism, to which the names of Owen and Fourier have attached, and dispose of that question? Will it cope with the allied questions of Government, Nonresistance, and all that belongs under that category? Will it measure itself with the chapter on Slavery, in some sort the special enigma of the time, as it has provoked against it a sort of inspiration and enthusiasm singular in modern history? There are literary and philosophical reputations to settle. The name of Swedenborg has in this very time acquired new honors, and the current year has witnessed the appearance, in their first English translation, of his manuscripts. Here is an unsettled account in the book of Fame; a nebula to dim eyes, but which great telescopes may yet resolve into a magnificent system. Here is the standing problem of Natural Science, and the merits of her great interpreters to be determined; the encyclopædical Humboldt, and the intrepid generalizations collected by the author of the Vestiges of Creation. Here is the balance to be adjusted between the exact French school of Cuvier, and the genial catholic theorists, Geoffroy St.-Hilaire, Goethe, Davy and Agassiz. Will it venture into the thin and difficult air of that school where the secrets of structure are discussed under the topics of mesmerism and the twilights of demonology?

¶ What will easily seem to many a far higher question than any other is that which respects the embodying of the Conscience of the period. Is the age we live in unfriendly to the highest powers; to that blending of the affections with the poetic faculty which has distinguished the Religious Ages? We have a better opinion of the economy of Nature than to fear that those varying phases which humanity presents ever leave out any of the grand springs of human action. Mankind for the moment seem to be in search of a religion. The Jewish *cultus* is declining; the Divine, or, as some will say, the truly Human, hovers, now seen, now unseen, before us. This period of peace, this hour when the jangle of contending churches is hushing or hushed, will seem only the more propitious to those who believe that man need not fear the want of religion, because they know his religious constitution,—that he must rest on the moral and religious sentiments, as the motion of bodies rests on geometry. In the rapid decay of what was called religion, timid and unthinking people fancy a decay of the hope of man. But the moral and religious sentiments meet

us everywhere, alike in markets as in churches. A God starts up behind cotton bales also. The conscience of man is regenerated as is the atmosphere, so that society cannot be debauched. The health which we call Virtue is an equipoise which easily redresses itself, and resembles those rocking stones which a child's finger can move, and a weight of many hundred tons cannot overthrow.

¶ With these convictions, a few friends of good letters have thought fit to associate themselves for the conduct of a new journal. We have obeyed the custom and convenience of the time in adopting this form of a Review, as a mould into which all metal most easily runs. But the form shall not be suffered to be an impediment. The name might convey the impression of a book of criticism, and that nothing is to be found here which was not written expressly for the Review; but good readers know that inspired pages are not written to fill a space, but for inevitable utterance; and to such our journal is freely and solicitously open, even though everything else be excluded. We entreat the aid of every lover of truth and right, and let these principles entreat for us. We rely on the talents and industry of good men known to us, but much more on the magnetism of truth, which is multiplying and educating advocates for itself and friends for us. We rely on the truth for and against ourselves.

Address to Kossuth

SIR,—The fatigue of your many public visits, in such unbroken succession as may compare with the toils of a campaign, forbid us to detain you long. The people of this town share with their countrymen the admiration of valor and perseverance; they, like their compatriots, have been hungry to see the man whose extraordinary eloquence is seconded by the splendor and the solidity of his actions. But, as it is the privilege of the people of this town to keep a hallowed mound which has a place in the story of the country; as Concord is one of the monuments of freedom; we knew beforehand that you could not go by us; you could not take all your steps in the pilgrimage of American liberty, until you had seen with your eyes the ruins of the bridge where a handful of brave farmers opened our Revolution. Therefore, we sat and waited for you.

¶ And now, Sir, we are heartily glad to see you, at last, in these fields. We set no more value than you do on cheers and huzzas. But we think that the graves of our heroes around us throb to-day to a footstep that sounded like their own:—

> "The mighty tread
> Brings from the dust the sound of liberty."

¶ Sir, we have watched with attention your progress through the land, and the varying feeling with which you have been received, and the unvarying tone and countenance which you have maintained. We wish to discriminate in our regard. We wish to reserve our honor for actions of the noblest strain. We please ourselves that in you we meet one whose temper was long since tried in the fire, and made equal to all events; a man so truly in love with the greatest future, that he cannot be diverted to any less.

¶ It is our republican doctrine, too, that the wide variety of opinions is an advantage. I believe I may say of the people of this country at large, that their sympathy is more worth, because it stands the test of party. It is not a blind wave; it is a living soul contending with living souls. It is, in every expression, antagonized. No opinion will pass but must stand the tug of war. As you see, the love you win is worth something; for it has been argued through; its foundation searched; it has proved sound and whole; it may be avowed; it will last, and it will draw all opinion to itself.

¶ We have seen, with great pleasure, that there is nothing accidental in your attitude. We have seen that you are organically in that cause you plead. The man of Freedom, you are also the man of Fate. You do not elect, but you

are elected by God and your genius to the task. We do not, therefore, affect to thank you. We only see in you the angel of freedom, crossing sea and land; crossing parties, nationalities, private interests and self-esteems; dividing populations where you go, and drawing to your part only the good. We are afraid that you are growing popular, Sir; you may be called to the dangers of prosperity. But, hitherto, you have had in all centuries and in all parties only the men of heart. I do not know but you will have the million yet. Then, may your strength be equal to your day. But remember, Sir, that everything great and excellent in the world is in minorities.

¶ Far be from us, Sir, any tone of patronage; we ought rather to ask yours. We know the austere condition of liberty—that it must be reconquered over and over again; yea, day by day; that it is a state of war; that it is always slipping from those who boast it to those who fight for it: and you, the foremost soldier of freedom in this age, —it is for us to crave your judgment; who are we that we should dictate to you? You have won your own. We only affirm it. This country of workingmen greets in you a worker. This republic greets in you a republican. We only say, "Well done, good and faithful."—You have earned your own nobility at home. We admit you *ad eundem* (as they say at College). We admit you to the same degree, without new trial. We suspend all rules before so paramount a merit. You may well sit a doctor in the college of liberty. You have achieved your right to interpret our Washington. And I speak the sense not only of every generous American, but the law of mind, when I say that it is not those who live idly in the city called after his name, but those who, all over the world, think and act like him, who can claim to explain the sentiment of Washington.

¶ Sir, whatever obstruction from selfishness, indifference, or from property (which always sympathizes with possession) you may encounter, we congratulate you that you have known how to convert calamities into powers, exile into a campaign, present defeat into lasting victory. For this new crusade which you preach to willing and to unwilling ears in America is a seed of armed men. You have got your story told in every palace and log hut and prairie camp, throughout this continent. And, as the shores of Europe and America approach every month, and their politics will one day mingle, when the crisis arrives it will find us all instructed beforehand in the rights and wrongs of Hungary, and parties already to her freedom.

Address at the Consecration of Sleepy Hollow Cemetery

CITIZENS AND FRIENDS: The committee to whom was confided the charge of carrying out the wishes of the town in opening the cemetery, having proceeded so far as to enclose the ground, and cut the necessary roads, and having laid off as many lots as are likely to be wanted at present, have thought it fit to call the inhabitants together, to show you the ground, now that the new avenues make its advantages appear; and to put it at your disposition.

¶ They have thought that the taking possession of this field ought to be marked by a public meeting and religious rites: and they have requested me to say a few words which the serious and tender occasion inspires.

¶ And this concourse of friendly company assures me that they have rightly interpreted your wishes. [Here followed, in the address, about three pages of matter which Mr. Emerson used later in his essay on Immortality, which may be found in the volume *Letters and Social Aims*, beginning on page 825, "The credence of men," etc., and ending on page 826 with the sentence, "Meantime the true disciples saw, through the letters, the doctrine of eternity which dissolved the poor corpse and nature also, and gave grandeur to the passing hour."]

¶ In these times we see the defects of our old theology; its inferiority to our habit of thoughts. Men go up and down; Science is popularized; the irresistible democracy—shall I call it?—of chemistry, of vegetation, which recomposes for new life every decomposing particle,—the race never dying, the individual never spared,—have impressed on the mind of the age the futility of these old arts of preserving. We give our earth to earth. We will not jealously guard a few atoms under immense marbles, selfishly and impossibly sequestering it from the vast circulations of Nature, but, at the same time, fully admitting the divine hope and love which belong to our nature, wishing to make one spot tender to our children, who shall come hither in the next century to read the dates of these lives.

¶ Our people accepting this lesson from science, yet touched by the tenderness which Christianity breathes, have found a mean in the consecration of gardens. A simultaneous movement has, in a hundred cities and towns in this country, selected some convenient piece of undulating ground with pleasant woods and waters; every family chooses its own clump of trees; and we lay the corpse in these leafy colonnades.

¶ A grove of trees,—what benefit or ornament is so fair and great? they make the landscape; they keep the earth habitable; their roots run down, like cattle, to the water-courses; their heads expand to feed the atmosphere. The life of a tree is a hundred and a thousand years; its decays ornamental; its repairs self-made: they grow when we sleep, they grew when we were unborn. Man is a moth among these longevities. He plants for the next millennium. Shadows haunt them; all that ever lived about them cling to them. You can almost see behind these pines the Indian with bow and arrow lurking yet exploring the traces of the old trail.

¶ Modern taste has shown that there is no ornament, no architecture alone, so sumptuous as well disposed woods and waters, where art has been employed only to remove superfluities, and bring out the natural advantages. In cultivated grounds one sees the picturesque and opulent effect of the familiar shrubs, barberry, lilac, privet and thorns, when they are disposed in masses, and in large spaces. What work of man will compare with the plantation of a park? It dignifies life. It is a seat for friendship, counsel, taste and religion. I do not wonder that they are the chosen badge and point of pride of European nobility. But how much more are they needed by us, anxious, overdriven Americans, to stanch and appease that fury of temperament which our climate bestows!

¶ This tract fortunately lies adjoining to the Agricultural Society's ground, to the New Burial Ground, to the Court House and the Town House, making together a large block of public ground, permanent property of the town and county,—all the ornaments of either adding so much value to all.

¶ I suppose all of us will readily admit the value of parks and cultivated grounds to the pleasure and education of the people, but I have heard it said here that we would gladly spend for a park for the living, but not for a cemetery; a garden for the living, a home of thought and friendship. Certainly the living need it more than the dead; indeed, to speak precisely, it is given to the dead for the reaction of benefit on the living. But if the direct regard to the living be thought expedient, that is also in your power. This ground is happily so divided by Nature as to admit of this relation between the Past and the Present. In the valley where we stand will be the Monuments. On the other side of the ridge, towards the town, a portion of the land is in full view of the cheer of the village and is out of sight of the Monuments; it admits of being reserved for secular purposes; for games,—not such as the Greeks honored the dead with, but for games of education; the distribution of school prizes; the meeting of teachers; patriotic eloquence, the utterance of the principles of national liberty to private, social, literary or religious fraternities.

Here we may establish that most agreeable of all museums, and agreeable to the temper of our times,—an *Arboretum*,—wherein may be planted, by the taste of every citizen, one tree, with its name recorded in a book; every tree that is native to Massachusetts, or will grow in it; so that every child may be shown growing, side by side, the eleven oaks of Massachusetts; and the twenty willows; the beech, which we have allowed to die out of the eastern counties; and here the vast firs of California and Oregon.

¶ This spot for twenty years has borne the name of *Sleepy Hollow*. Its seclusion from the village in its immediate neighborhood had made it to all the inhabitants an easy retreat on a Sabbath day, or a summer twilight, and it was inevitably chosen by them when the design of a new cemetery was broached, if it did not suggest the design, as the fit place for their final repose. In all the multitudes of woodlands and hillsides, which within a few years have been laid out with a similar design, I have not known one so fitly named. *Sleepy Hollow*. In this quiet valley, as in the palm of Nature's hand, we shall sleep well when we have finished our day. What is the Earth itself but a surface scooped into nooks and caves of slumber—according to the Eastern fable, a bridge full of holes, into one or other of which all the passengers sink to silence? Nay, when I think of the mystery of life, its round of illusions, our ignorance of its beginning or its end, the speed of the changes of that glittering dream we call existence,—I think sometimes that the vault of the sky arching there upward, under which our busy being is whirled, is only a Sleepy Hollow, with path of Suns, instead of footpaths; and Milky Ways, for truck-roads.

¶ The ground has the peaceful character that belongs to this town;—no lofty crags, no glittering cataracts;—but I hold that every part of Nature is handsome when not deformed by bad Art. Bleak sea-rocks and sea-downs and blasted heaths have their own beauty; and though we make much ado in our praises of Italy or Andes, Nature makes not so much difference. The morning, the moonlight, the spring day, are magical painters, and can glorify a meadow or a rock.

¶ But we must look forward also, and make ourselves a thousand years old; and when these acorns, that are falling at our feet, are oaks overshadowing our children in a remote century, this mute green bank will be full of history: the good, the wise and great will have left their names and virtues on the trees; heroes, poets, beauties, sanctities, benefactors, will have made the air timeable and articulate.

¶ And hither shall repair, to this modest spot of God's earth, every sweet and friendly influence; the beautiful night and beautiful day will come in turn to sit upon the grass. Our use will not displace the old tenants. The well-beloved birds will not sing one song the less, the high-holding woodpecker, the meadow-lark, the oriole, robin, purple finch, bluebird, thrush and red-eyed warbler, the heron, the bittern will find out the hospitality and protection from the gun of this asylum, and will seek the waters of the meadow; and in the grass, and by the pond, the locust, the cricket and the hyla, shall shrilly play.

¶ We shall bring hither the body of the dead, but how shall we catch the escaped soul? Here will burn for us, as the oath of God, the sublime belief. I have heard that death takes us away from ill things, not from good. I have heard that when we pronounce the name of man, we pronounce the belief of immortality. All great natures delight in stability; all great men find eternity affirmed in the promise of their faculties. Why is the fable of the Wandering Jew agreeable to men, but because they want more time and land to execute their thoughts in? Life is not long enough for art, nor long enough for friendship. The evidence from intellect is as valid as the evidence from love. The being that can share a thought and feeling so sublime as confidence in truth is no mushroom. Our dissatisfaction with any other solution is the blazing evidence of immortality.

Robert Burns

MR. PRESIDENT, AND GENTLEMEN: I do not know by what untoward accident it has chanced, and I forbear to inquire, that, in this accomplished circle, it should fall to me, the worst Scotsman of all, to receive your commands, and at the latest hour too, to respond to the sentiment just offered, and which indeed makes the occasion. But I am told there is no appeal, and I must trust to the inspirations of the theme to make a fitness which does not otherwise exist. Yet, Sir, I heartily feel the singular claims of the occasion. At the first announcement, from I know not whence, that the 25th of January was the hundredth anniversary of the birth of Robert Burns, a sudden consent warmed the great English race, in all its kingdoms, colonies and states, all over the world, to keep the festival. We are here to hold our parliament with love and poesy, as men were wont to do in the Middle Ages. Those famous parliaments might or might not have had more stateliness and better singers than we,—though that is yet to be known,—but they could not have better reason. I can only explain this singular unanimity in a race which rarely acts together, but rather after their watchword, Each for himself,—by the fact that Robert Burns, the poet of the middle class, represents in the mind of men to-day that great uprising of the middle class against the armed and privileged minorities, that uprising which worked politically in the American and French Revolutions, and which, not in governments so much as in education and social order, has changed the face of the world.

NOT Latimer, nor Luther struck more telling blows against false theology than did this brave singer. The Confession of Augsburg, the Declaration of Independence, the French Rights of Man, and the Marseillaise, are not more weighty documents in the history of freedom than the songs of Burns.

¶ In order for this destiny, his birth, breeding and fortunes were low. His organic sentiment was absolute independence, and resting as it should on a life of labor. No man existed who could look down on him. They that looked into his eyes saw that they might look down the sky as easily. His muse and teaching was common sense, joyful, aggressive, irresistible. Not Latimer, nor Luther struck more telling blows against false theology than did this brave singer. The Confession of Augsburg, the Declaration of Independence, the French Rights of Man, and the Marseillaise, are not more weighty documents in the history of freedom than the songs of Burns. His satire has lost none of its edge. His musical arrows yet sing through the air. He is so substantially a reformer that I find his grand plain sense in close chain with the greatest masters,—Rabelais, Shakspeare in comedy, Cervantes, Butler, and Burns. If I should add another name, I find it only in a living countryman of Burns.

¶ He is an exceptional genius. The people who care nothing for literature and poetry care for Burns. It was indifferent—they thought who saw him—whether he wrote verse or not: he could have done anything else as well. Yet how true a poet is he! And the poet, too, of poor men, of gray hodden and the guernsey coat and the blouse. He has given voice to all the experiences of common life; he has endeared the farmhouse and cottage, patches and poverty, beans and barley; ale, the poor man's wine; hardship; the fear of debt; the dear society of weans and wife, of brothers and sisters, proud of each other, knowing so few and finding amends for want and obscurity in books

and thoughts. What a love of Nature, and, shall I say it? of middle-class Nature. Not like Goethe, in the stars, or like Byron, in the ocean, or Moore, in the luxurious East, but in the homely landscape which the poor see around them,—bleak leagues of pasture and stubble, ice and sleet and rain and snow-choked brooks; birds, hares, field-mice, thistles and heather, which he daily knew. How many "Bonny Doons" and "John Anderson my jo's" and "Auld lang synes" all around the earth have his verses been applied to! And his love-songs still woo and melt the youths and maids; the farm-work, the country holiday, the fishing-cobble are still his debtors to-day.

¶ And as he was thus the poet of the poor, anxious, cheerful, working humanity, so had he the language of low life. He grew up in a rural district, speaking a *patois* unintelligible to all but natives, and he has made the Lowland Scotch a Doric dialect of fame. It is the only example in history of a language made classic by the genius of a single man. But more than this. He had that secret of genius to draw from the bottom of society the strength of its speech, and astonish the ears of the polite with these artless words, better than art, and filtered of all offence through his beauty. It seemed odious to Luther that the devil should have all the best tunes; he would bring them into the churches; and Burns knew how to take from fairs and gypsies, blacksmiths and drovers, the speech of the market and street, and clothe it with melody. But I am detaining you too long. The memory of Burns,—I am afraid heaven and earth have taken too good care of it to leave us anything to say. The west winds are murmuring it. Open the windows behind you, and hearken for the incoming tide, what the waves say of it. The doves perching always on the eaves of the Stone Chapel opposite, may know something about it. Every name in broad Scotland keeps his fame bright. The memory of Burns,—every man's, every boy's and girl's head carries snatches of his songs, and they say them by heart, and, what is strangest of all, never learned them from a book, but from mouth to mouth. The wind whispers them, the birds whistle them, the corn, barley, and bulrushes hoarsely rustle them, nay, the music-boxes at Geneva are framed and toothed to play them; the hand-organs of the Savoyards in all cities repeat them, and the chimes of bells ring them in the spires. They are the property and the solace of mankind.

Shakspeare

TIS not our fault if we have not made this evening's circle still richer than it is. We seriously endeavored, besides our brothers and our seniors, on whom the ordinary lead of literary and social action falls—and falls because of their ability—to draw out of their retirements a few rarer lovers of the muse—"seld-seen flamens"—whom this day seemed to elect and challenge. And it is to us a painful disappointment that Bryant and Whittier as guests, and our own Hawthorne,—with the best will to come,—should have found it impossible at last; and again, that a well-known and honored compatriot, who first in Boston wrote elegant verse, and on Shakspeare, and whose American devotion through forty or fifty years to the affairs of a bank, has not been able to bury the fires of his genius,—Mr. Charles Sprague,—pleads the infirmities of age as an absolute bar to his presence with us.

¶ We regret also the absence of our members Sumner and Motley.

¶ We can hardly think of an occasion where so little need be said. We are all content to let Shakspeare speak for himself. His fame is settled on the foundations of the moral and intellectual world. Wherever there are men, and in the degree in which they are civil—have power of mind, sensibility to beauty, music, the secrets of passion, and the liquid expression of thought, he has risen to his place as the first poet of the world.

¶ Genius is the consoler of our mortal condition, and Shakspeare taught us that the little world of the heart is vaster, deeper and richer than the spaces of astronomy. What shocks of surprise and sympathetic power, this battery, which he is, imparts to every fine mind that is born! We say to the young child in the cradle, "Happy, and defended against Fate! for here is Nature, and here is Shakspeare, waiting for you!"

¶ 'T is our metre of culture. He is a cultivated man—who can tell us something new of Shakspeare. All criticism is only a making of rules out of his beauties. He is as superior to his countrymen, as to all other countrymen. He fulfilled the famous prophecy of Socrates, that the poet most excellent in tragedy would be most excellent in comedy, and more than fulfilled it by making tragedy also a victorious melody which healed its own wounds. In short, Shakspeare is the one resource of our life on which no gloom gathers; the fountain of joy which honors him who tastes it; day without night; pleasure without repentance; the genius which, in unpoetic ages, keeps poetry in honor and, in sterile periods, keeps up the credit of the human mind.

¶ His genius has reacted on himself. Men were so astonished and occupied by his poems that they have not been able to see his face and condition, or say, who was his father and his brethren; or what life he led; and at the short distance of three hundred years he is mythical, like Orpheus and Homer, and we have already seen the most fantastic theories plausibly urged, as that Raleigh and Bacon were the authors of the plays.

¶ Yet we pause expectant before the genius of Shakspeare—as if his biography were not yet written; until the problem of the whole English race is solved.

¶ I see, among the lovers of this catholic genius, here present, a few, whose deeper knowledge invites me to hazard an article of my literary creed; that Shakspeare, by his transcendant reach of thought, so unites the extremes, that, whilst he has kept the theatre now for three centuries, and, like a street-bible, furnishes sayings to the market, courts of law, the senate, and common discourse,—he is yet to all wise men the companion of the closet. The student finds the solitariest place not solitary enough to read him; and so searching is his penetration, and such the charm of his speech, that he still agitates the heart in age as in youth, and will, until it ceases to beat.

GENIUS is the consoler of our mortal condition, and Shakspeare taught us that the little world of the heart is vaster, deeper and richer than the spaces of astronomy.

¶ Young men of a contemplative turn carry his sonnets in the pocket. With that book, the shade of any tree, a room in any inn, becomes a chapel or oratory in which to sit out their happiest hours. Later they find riper and manlier lessons in the plays.

¶ And secondly, he is the most robust and potent thinker that ever was. I find that it was not history, courts and affairs that gave him lessons, but he that gave grandeur and prestige to them. There never was a writer who, seeming to draw every hint from outward history, the life of cities and courts, owed them so little. You shall never find in this world the barons or kings he depicted. 'T is fine for Englishmen to say, they only knew history by Shakspeare. The palaces they compass earth and sea to enter, the magnificence and personages of royal and imperial abodes, are

shabby imitations and caricatures of his, —clumsy pupils of his instruction. There are no Warwicks, no Talbots, no Bolingbrokes, no Cardinals, no Harry Fifth, in real Europe, like his. The loyalty and royalty he drew were all his own. The real Elizabeths, Jameses and Louises were painted sticks before this magician.

¶ The unaffected joy of the comedy, —he lives in a gale,—contrasted with the grandeur of the tragedy, where he stoops to no contrivance, no pulpiting, but flies an eagle at the heart of the problem; where his speech is a Delphi, —the great Nemesis that he is and utters. What a great heart of equity is he! How good and sound and inviolable his innocency, that is never to seek, and never wrong, but speaks the pure sense of humanity on each occasion. He dwarfs all writers without a solitary exception. No egotism. The egotism of men is immense. It concealed Shakspeare for a century. His mind has a superiority such that the universities should read lectures on him, and conquer the unconquerable if they can.

¶ There are periods fruitful of great men; others, barren; or, as the world is always equal to itself, periods when the heat is latent,—others when it is given out.

¶ They are like the great wine years, —the vintage of 1847, is it, or 1835? —which are not only noted in the carte of the table d'hôte, but which, it is said, are always followed by new vivacity in the politics of Europe. His birth marked a great wine year when wonderful grapes ripened in the vintage of God, when Shakespeare and Galileo were born within a few months of each other, and Cervantes was his exact contemporary, and, in short space before and after, Montaigne, Bacon, Spenser, Raleigh and Jonson. Yet Shakspeare, not only by any inferiority of theirs, but simply by his colossal proportions, dwarfs the geniuses of Elizabeth as easily as the wits of Anne, or the poor slipshod troubadours of King René.

¶ In our ordinary experience of men there are some men so born to live well that, in whatever company they fall,— high or low,—they fit well, and lead it! but, being advanced to a higher class, they are just as much in their element as before, and easily command: and being again preferred to selecter companions, find no obstacle to ruling these as they did their earlier mates; I suppose because they have more humanity than talent, whilst they have quite as much of the last as any of the company. It would strike you as comic, if I should give my own customary examples of this elasticity, though striking enough to me. I could name in this very company—or not going far out of it—very good types, but in order to be parliamentary, Franklin, Burns and Walter Scott are examples of the rule; and king of men, by this grace of God also, is Shakspeare.

¶ The Pilgrims came to Plymouth in 1620. The plays of Shakspeare were not published until three years later. Had they been published earlier, our forefathers, or the most poetical among them, might have stayed at home to read them.

Humboldt

HUMBOLDT was one of those wonders of the world, like Aristotle, like Julius Cæsar, like the Admirable Crichton, who appear from time to time, as if to show us the possibilities of the human mind, the force and the range of the faculties,—a universal man, not only possessed of great particular talents, but they were symmetrical, his parts were well put together. As we know, a man's natural powers are often a sort of committee that slowly, one at a time, give their attention and action; but Humboldt's were all united, one electric chain, so that a university, a whole French Academy, travelled in his shoes. With great propriety, he named his sketch of the results of science Cosmos. There is no other such survey or surveyor. The wonderful Humboldt, with his solid centre and expanded wings, marches like an army, gathering

all things as he goes. How he reaches from science to science, from law to law, folding away moons and asteroids and solar systems in the clauses and parentheses of his encyclopædic paragraphs! There is no book like it; none indicating such a battalion of powers. You could not put him on any sea or shore but his instant recollection of every other sea or shore illuminated this. ¶ He was properly a man of the world; you could not lose him; you could not detain him; you could not disappoint him, for at any point on land or sea he found the objects of his researches. When he was stopped in Spain and could not get away, he turned round and interpreted their mountain system, explaining the past history of the continent of Europe. He belonged to that wonderful German nation, the foremost scholars in all history, who surpass all others in industry, space and endurance. A German reads a literature whilst we are reading a book. One of their writers warns his countrymen that it is not the Battle of Leipsic, but the Leipsic Fair Catalogue, which raises them above the French. I remember Cuvier tells us of fossil elephants; that Germany has furnished the greatest number;—not because there are more elephants in Germany,—oh no; but because in that empire there is no canton without some well-informed person capable of making researches and publishing interesting results. I know that we have been accustomed to think they were too good scholars, that because they reflect, they never resolve, that "in a crisis no plan-maker was to be found in the empire;" but we have lived to see now, for the second time in the history of Prussia, a statesman of the first class, with a clear head and an inflexible will.

Walter Scott

THE memory of Sir Walter Scott is dear to this Society, of which he was for ten years an honorary member. If only as an eminent antiquary who has shed light on the history of Europe and of the English race, he had high claims to our regard. But to the rare tribute of a centennial anniversary of his birthday, which we gladly join with Scotland, and indeed with Europe, to keep, he is not less entitled—perhaps he alone among literary men of this century is entitled—by the exceptional debt which all English-speaking men have gladly owed to his character and genius. I think no modern writer has inspired his readers with such affection to his own personality. I can well remember as far back as when The Lord of the Isles was first republished in Boston, in 1815,—my own and my school-fellows' joy in the book. Marmion and The Lay had gone before, but we were then learning to spell. In the face of the later novels, we still claim that his poetry is the delight of boys. But this means that when we reopen these old books we all consent to be boys again. We tread over our youthful grounds with joy. Critics have found them to be only rhymed prose. But I believe that many of those who read them in youth, when, later, they come to dismiss finally their school-days' library, will make some fond exception for Scott as for Byron.

¶ It is easy to see the origin of his poems. His own ear had been charmed by old ballads crooned by Scottish dames at firesides, and written down from their lips by antiquaries; and finding them now outgrown and dishonored by the new culture, he attempted to dignify and adapt them to the times in which he lived. Just so much thought, so much picturesque detail in dialogue or description as the old ballad required, so much suppression of details and leaping to the event, he would keep and use, but without any ambition to write a high poem after a classic model. He made no pretension to the lofty style of Spenser, or Milton, or Wordsworth. Compared with their purified songs, purified of all ephemeral color or material, his were *vers de société*. But he had the skill proper to *vers de société*, —skill to fit his verse to his topic, and not to write solemn pentameters alike on a hero or a spaniel. His good sense

probably elected the ballad to make his audience larger. He apprehended in advance the immense enlargement of the reading public, which almost dates from the era of his books,—which his books and Byron's inaugurated; and which, though until then unheard of, has become familiar to the present time.

¶ If the success of his poems, however large, was partial, that of his novels was complete. The tone of strength in Waverley at once announced the master, and was more than justified by the superior genius of the following romances, up to the Bride of Lammermoor, which almost goes back to Æschylus for a counterpart as a painting of Fate,—leaving on every reader the impression of the highest and purest tragedy.

¶ His power on the public mind rests on the singular union of two influences. By nature, by his reading and taste an aristocrat, in a time and country which easily gave him that bias, he had the virtues and graces of that class, and by his eminent humanity and his love of labor escaped its harm. He saw in the English Church the symbol and seal of all social order; in the historical aristocracy the benefits to the state which Burke claimed for it; and in his own reading and research such store of legend and renown as won his imagination to their cause. Not less his eminent humanity delighted in the sense and virtue and wit of the common people. In his own household and neighbors he found characters and pets of humble class, with whom he established the best relation,—small farmers and tradesmen, shepherds, fishermen, gypsies, peasant-girls, crones,—and came with these into real ties of mutual help and good will. From these originals he drew so genially his Jeanie Deans, his Dinmonts and Edie Ochiltrees, Caleb Balderstones and Fairservices, Cuddie Headriggs, Dominies, Meg Merrilies, and Jenny Rintherouts, full of life and reality; making these, too, the pivots on which the plots of his stories turn; and meantime without one word of brag of this discernment,—nay, this extreme sympathy reaching down to every beggar and beggar's dog, and horse and cow. In the number and variety of his characters he approaches Shakspeare. Other painters in verse or prose have thrown into literature a few type-figures; as Cervantes, De Foe, Richardson, Goldsmith, Sterne and Fielding; but Scott portrayed with equal strength and success every figure in his crowded company.

¶ His strong good sense saved him from the faults and foibles incident to poets,—from nervous egotism, sham modesty or jealousy. He played ever a manly part. With such a fortune and such a genius, we should look to see what heavy toll the Fates took of him, as of Rousseau or Voltaire, of Swift or Byron. But no: he had no insanity, or vice, or blemish. He was a thoroughly upright, wise and great-hearted man, equal to whatever event or fortune should try him. Disasters only drove him to immense exertion. What an ornament and safeguard is humor! Far better than wit for a poet and writer. It is a genius itself, and so defends from the insanities.

¶ Under what rare conjunction of stars was this man born, that, wherever he lived, he found superior men, passed all his life in the best company, and still found himself the best of the best! He was apprenticed at Edinburgh to a Writer to the Signet, and became a Writer to the Signet, and found himself in his youth and manhood and age in the society of Mackintosh, Horner, Jeffrey, Playfair, Dugald Stewart, Sydney Smith, Leslie, Sir William Hamilton, Wilson, Hogg, De Quincey,—to name only some of his literary neighbors, and, as soon as he died, all this brilliant circle was broken up.

Speech at the Banquet in Honor of the Chinese Embassy

MR. MAYOR: I suppose we are all of one opinion on this remarkable occasion of meeting the embassy sent from the oldest Empire in the world to the youngest Republic. All share the surprise and pleasure when the venerable Oriental dynasty—hitherto a romantic

legend to most of us—suddenly steps into the fellowship of nations. This auspicious event, considered in connection with the late innovations in Japan, marks a new era, and is an irresistible result of the science which has given us the power of steam and the electric elegraph. It is the more welcome for the surprise. We had said of China, as the old prophet said of Egypt, "Her strength is to sit still." Her people had such elemental conservatism that by some wonderful force of race and national manners, the wars and revolutions that occur in her annals have proved but momentary swells or surges on the pacific ocean of her history, leaving no trace. But in its immovability this race has claims. China is old, not in time only, but in wisdom, which is gray hair to a nation, —or, rather, truly seen, is eternal youth. As we know, China had the magnet centuries before Europe; and block-printing or stereotype, and lithography, and gunpowder, and vaccination, and canals; had anticipated Linnæus's nomenclature of plants; had codes, journals, clubs, hackney coaches, and, thirty centuries before New York, had the custom of New Year's calls of comity and reconciliation. I need not mention its useful arts,—its pottery indispensable to the world, the luxury of silks, and its tea, the cordial of nations. But I must remember that she has respectable remains of astronomic science, and historic records of forgotten time, that have supplied important gaps in the ancient history of the western nations. Then she has philosophers who cannot be spared. Confucius has not yet gathered all his fame. When Socrates heard that the oracle declared that he was the wisest of men, he said, it must mean that other men held that they were wise, but that he knew that he knew nothing. Confucius had already affirmed this of himself: and what we call the GOLDEN RULE of Jesus, Confucius had uttered in the same terms five hundred years before. His morals, though addressed to a state of society unlike ours, we read with profit to-day. His rare perception appears in his GOLDEN MEAN, his doctrine of Reciprocity, his unerring insight,—putting always the blame of our misfortunes on ourselves; as when to the governor who complained of thieves, he said, "If you, sir, were not covetous, though you should reward them for it, they would not steal." His ideal of greatness predicts Marcus Antoninus. At the same time, he abstained from paradox, and met the ingrained prudence of his nation by saying always, "Bend one cubit to straighten eight."

¶ China interests us at this moment in a point of politics. I am sure that gentlemen around me bear in mind the bill which the Hon. Mr. Jenckes of Rhode Island has twice attempted to carry through Congress, requiring that candidates for public offices shall first pass examinations on their literary qualifications for the same. Well, China has preceded us, as well as England and France, in this essential correction of a reckless usage; and the like high esteem of education appears in China in social life, to whose distinctions it is made an indispensable passport.

¶ It is gratifying to know that the advantages of the new intercourse between the two countries are daily manifest on the Pacific coast. The immigrants from Asia come in crowds. Their power of continuous labor, their versatility in adapting themselves to new conditions, their stoical economy, are unlooked-for virtues. They send back to their friends, in China, money, new products of art, new tools, machinery, new foods, etc., and are thus establishing a commerce without limit. I cannot help adding, after what I have heard to-night, that I have read in the journals a statement from an English source, that Sir Frederic Bruce attributed to Mr. Burlingame the merit of the happy reform in the relations of foreign governments to China. I am quite sure that I heard from Mr. Burlingame in New York, in his last visit to America, that the whole merit of it belonged to Sir Frederic Bruce. It appears that the ambassadors were emulous in their magnanimity. It is certainly the best guaranty for the interests of China and of humanity.

Remarks at the Meeting for Organizing the Free Religious Association

MR. CHAIRMAN: I hardly felt, in finding this house this morning, that I had come into the right hall. I came, as I supposed myself summoned, to a little committee meeting, for some practical end, where I should happily and humbly learn my lesson; and I supposed myself no longer subject to your call when I saw this house. I have listened with great pleasure to the lessons which we have heard. To many, to those last spoken, I have found so much in accord with my own thought that I have little left to say. I think that it does great honor to the sensibility of the committee that they have felt the universal demand in the community for just the movement they have begun, I say again, in the phrase used by my friend, that we began many years ago, —yes, and many ages before that. But I think the necessity very great, and it has prompted an equal magnanimity, that thus invites all classes, all religious men, whatever their connections, whatever their specialties, in whatever relation they stand to the Christian Church, to unite in a movement of benefit to men, under the sanction of religion. We are all very sensible—it is forced on us every day—of the feeling that churches are outgrown; that the creeds are outgrown; that a technical theology no longer suits us. It is not the ill will of people—no, indeed, but the incapacity for confining themselves there. The church is not large enough for the man; it cannot inspire the enthusiasm which is the parent of everything good in history, which makes the romance of history. For that enthusiasm you must have something greater than yourselves, and not less.

¶ The child, the young student, finds scope in his mathematics and chemistry or natural history, because he finds a truth larger than he is; finds himself continually instructed. But, in churches, every healthy and thoughtful mind finds itself in something less; it is checked, cribbed, confined. And the statistics of the American, the English and the German cities, showing that the mass of the population is leaving off going to church, indicate the necessity, which should have been foreseen, that the Church should always be new and extemporized, because it is eternal and springs from the sentiment of men, or it does not exist. One wonders sometimes that the churches still retain so many votaries, when he reads the histories of the Church. There is an element of childish infatuation in them which does not exalt our respect for man. Read in Michelet, that in Europe, for twelve or fourteen centuries, God the Father had no temple and no altar. The Holy Ghost and the Son of Mary were worshipped, and in the thirteenth century the First Person began to appear at the side of his Son, in pictures and in sculpture, for worship, but only through favor of his Son. These mortifying puerilities abound in religious history. But as soon as every man is apprised of the Divine Presence within his own mind, is apprised that the perfect law of duty corresponds with the laws of chemistry, of vegetation, of astronomy, as face to face in a glass; that the basis of duty, the order of society, the power of character, the wealth of culture, the perfection of taste, all draw their essence from this moral sentiment, then we have a religion that exalts, that commands all the social and all the private action.

¶ What strikes me in the sudden movement which brings together to-day so many separated friends,—separated but sympathetic,—and what I expected to find here, was some practical suggestions by which we were to reanimate and reorganize for ourselves the true Church, the pure worship. Pure doctrine always bears fruit in pure benefits. It is only by good works, it is only on the basis of active duty, that worship finds expression. What is best in the ancient religions was the sacred friendships between heroes, the Sacred Bands, and the relations of the Pythagorean disciples. Our Masonic institutions probably grew from the like origin. The close associa-

tion which bound the first disciples of Jesus is another example; and it were easy to find more. The soul of our late war, which will always be remembered as dignifying it, was, first, the desire to abolish slavery in this country, and secondly, to abolish the mischief of the war itself, by healing and saving the sick and wounded soldiers,—and this by the sacred bands of the Sanitary Commission. I wish that the various beneficent institutions which are springing up, like joyful plants of wholesomeness, all over this country, should all be remembered as within the sphere of this committee,—almost all of them are represented here,—and that within this little band that has gathered here to-day, should grow friendship. The interests that grow out of a meeting like this should bind us with new strength to the old eternal duties.

Speech at Second Annual Meeting of the Free Religious Association

FRIENDS: I wish I could deserve anything of the kind expression of my friend, the President, and the kind good will which the audience signifies, but it is not in my power to-day to meet the natural demands of the occasion, and, quite against my design and my will, I shall have to request the attention of the audience to a few written remarks, instead of the more extensive statement which I had hoped to offer them.

¶ I think we have disputed long enough. I think we might now relinquish our theological controversies to communities more idle and ignorant than we. I am glad that a more realistic church is coming to be the tendency of society, and that we are likely one day to forget our obstinate polemics in the ambition to excel each other in good works. I have no wish to proselyte any reluctant mind, nor, I think, have I any curiosity or impulse to intrude on those whose ways of thinking differ from mine. But as my friend, your presiding officer, has asked me to take at least some small part in this day's conversation, I am ready to give, as often before, the first simple foundation of my belief, that the Author of Nature has not left himself without a witness in any sane mind: that the moral sentiment speaks to every man the law after which the Universe was made; that we find parity, identity of design, through Nature, and benefit to be the uniform aim: that there is a force always at work to make the best better and the worst good. We have had not long since presented us by Max Müller a valuable paragraph from St. Augustine, not at all extraordinary in itself, but only as coming from that eminent Father in the Church, and at that age, in which St. Augustine writes: "That which is now called the Christian religion existed among the ancients, and never did not exist from the planting of the human race until Christ came in the flesh, at which time the true religion which already existed began to be called Christianity." I believe that not only Christianity is as old as the Creation,—not only every sentiment and precept of Christianity can be paralleled in other religious writings,—but more, that a man of religious susceptibility, and one at the same time conversant with many men,—say a much-travelled man,—can find the same idea in numberless conversations. The religious find religion wherever they associate. When I find in people narrow religion, I find also in them narrow reading. Nothing really is so self-publishing, so divulgatory, as thought. It cannot be confined or hid. It is easily carried; it takes no room; the knowledge of Europe looks out into Persia and India, and to the very Kaffirs. Every proverb, every fine text, every pregnant jest, travels across the line; and you will find it at Cape Town, or among the Tartars. We are all believers in natural religion; we all agree that the health and integrity of man is self-respect, self-subsistency, a regard to natural conscience. All education is to accustom him to trust himself, discriminate between his higher and lower thoughts, exert the timid faculties until they are robust, and thus train him to self-help, until he ceases to be an under-

ling, a tool, and becomes a benefactor. I think wise men wish their religion to be all of this kind, teaching the agent to go alone, not to hang on the world as a pensioner, a permitted person, but an adult, self-searching soul, brave to assist or resist a world: only humble and docile before the source of the wisdom he has discovered within him.

¶ As it is, every believer holds a different creed; that is, all the churches are churches of one member. All our sects have refined to the point of difference between them. The point of difference that still remains between churches, or between classes, is in the addition to the moral code, that is, to natural religion, of somewhat positive and historical. I think that to be, as Mr. Abbot has stated in his form, the one difference remaining. I object, of course, to the claim of mirculous dispensation,—certainly not to the *doctrine* of Christianity. This claim impairs, to my mind, the soundness of him who makes it, and indisposes us to his communion. This comes the wrong way; it comes from without, not within. This positive, historical, authoritative scheme is not consistent with our experience or our expectations. It is something not in Nature: it is contrary to that law of Nature which all wise men recognize; namely, never to require a larger cause than is necessary to the effect. George Fox, the Quaker, said that, though he read of Christ and God, he knew them only from the like spirit in his own soul. We want all the aids to our moral training. We cannot spare the vision nor the virtue of the saints; but let it be by pure sympathy, not with any personal or official claim. If you are childish, and exhibit your saint as a worker of wonders, a thaumaturgist, I am repelled. That claim takes his teachings out of logic and out of nature, and permits official and arbitrary senses to be grafted on the teachings. It is the praise of our New Testament that its teachings go to the honor and benefit of humanity,—that no better lesson has been taught or incarnated. Let it stand, beautiful and wholesome, with whatever is most like it in the teaching and practice of men; but do not attempt to elevate it out of humanity, by saying, "This was not a man," for then you confound it with the fables of every popular religion, and my distrust of the story makes me distrust the doctrine as soon as it differs from my own belief.

¶ Whoever thinks a story gains by the prodigious, by adding something out of nature, robs it more than he adds. It is no longer an example, a model; no longer a heart-stirring hero, but an exhibition, a wonder, an anomaly, removed out of the range of influence with thoughtful men. I submit that in sound frame of mind, we read or remember the religious sayings and oracles of other men, whether Jew or Indian, or Greek or Persian, only for friendship, only for joy in the social identity which they open to us, and that these words would have no weight with us if we had not the same conviction already. I find something stingy in the unwilling and disparaging admission of these foreign opinions—opinions from all parts of the world—by our churchmen, as if only to enhance by their dimness the superior light of Christianity. Meantime, observe, you cannot bring me too good a word, too dazzling a hope, too penetrating an insight from the Jews. I hail every one with delight, as showing the riches of my brother, my fellow soul, who could thus think and thus greatly feel. Zealots eagerly fasten their eyes on the differences between their creed and yours, but the charm of the study is in finding the agreements, the identities, in all the religions of men.

¶ I am glad to hear each sect complain that they do not now hold the opinions they are charged with. The earth moves, and the mind opens. I am glad to believe society contains a class of humble souls who enjoy the luxury of a religion that does not degrade; who think it the highest worship to expect of Heaven the most and the best; who do not wonder that there was a Christ, but that there were not a thousand; who have conceived an infinite hope for mankind; who believe that the history of Jesus is the history of every man, written large.

Address at the Opening of the Concord Free Public Library

THE people of Massachusetts prize the simple political arrangement of towns, each independent in its local government, electing its own officers, assessing its taxes, caring for its schools, its charities, its highways. That town is attractive to its native citizens and to immigrants which has a healthy site, good lands, good roads, good sidewalks, a good hotel; still more, if it have an adequate town hall, good churches, good preachers, good schools, and if it avail itself of the Act of the Legislature authorizing towns to tax themselves for the establishment of a public library. Happier, if it contain citizens who cannot wait for the slow growth of the population to make these advantages adequate to the desires of the people, but make costly gifts to education, civility and culture, as in the act we are met to witness and acknowledge to-day.

LITERATURE is the record of the best thoughts. Every attainment and discipline which increases a man's acquaintance with the invisible world lifts his being. Everything that gives him a new perception of beauty multiplies his pure enjoyments. A river of thought is always running out of the invisible world into the mind of man. Shall not they who received the largest streams spread abroad the healing waters?

¶ I think we cannot easily overestimate the benefit conferred. In the details of this munificence, we may all anticipate a sudden and lasting prosperity to this ancient town, in the benefit of a noble library, which adds by the beauty of the building, and its skilful arrangement, a quite new attraction,—making readers of those who are not readers,—making scholars of those who only read newspapers or novels until now; and whilst it secures a new and needed culture to our citizens, offering a strong attraction to strangers who are seeking a country home to sit down here. And I am not sure that when Boston learns the good deed of Mr. Munroe, it will not be a little envious, nor rest until it has annexed Concord to the city. Our founder has found the many admirable examples which have lately honored the country, of benefactors who have not waited to bequeath colleges and hospitals, but have themselves built them, reminding us of Sir Isaac Newton's saying, "that they who give nothing before their death, never in fact give at all."

¶ I think it is not easy to exaggerate the utility of the beneficence which takes this form. If you consider what has befallen you when reading a poem, or a history, or a tragedy, or a novel, even, that deeply interested you, — how you forgot the time of day, the persons sitting in the room, and the engagements for the evening, you will easily admit the wonderful property of books to make all towns equal: that Concord Library makes Concord as good as Rome, Paris or London, for the hour; —has the best of each of those cities in itself. Robinson Crusoe, could he have had a shelf of our books, could almost have done without his man Friday, or even the arriving ship.

¶ Every faculty casts itself into an art, and memory into the art of writing, that is, the book. The sedge *Papyrus*, which gave its name to our word paper, is of more importance to history than cotton, or silver, or gold. Its first use for writing is between three and four thousand years old, and though it hardly grows now in Egypt, where I lately looked for it in vain, I always remember with satisfaction that I saw that venerable plant in 1833, growing wild at Syracuse, in Sicily, near the fountain of Arethusa.

¶ The chairman of Mr. Munroe's trustees has told you how old is the foundation of our village library, and we think we can trace in our modest records a cor-

respondent effect of culture amidst our citizens. A deep religious sentiment is, in all times, an inspirer of the intellect, and that was not wanting here. The town was settled by a pious company of non-conformists from England, and the printed books of their pastor and leader, Rev. Peter Bulkeley, sometimes fellow of Saint John's College in Cambridge, England, testify the ardent sentiment which they shared. "There is no people," said he to his little flock of exiles, "but will strive to excel in something. What can we excel in if not in holiness? If we look to number, we are the fewest; if to strength, we are the weakest; if to wealth and riches, we are the poorest of all the people of God through the whole world. We cannot excel, nor so much as equal other people in these things, and if we come short in grace and holiness too, we are the most despicable people under heaven. Strive we therefore herein to excel, and suffer not this crown to be taken away from us."

¶ The religious bias of our founders had its usual effect to secure an education to read their Bible and hymn-book, and thence the step was easy for active minds to an acquaintance with history and with poetry. Peter Bulkeley sent his son John to the first class that graduated at Harvard College in 1642, and two sons to later classes. Major Simon Willard's son Samuel graduated at Harvard in 1659, and was for six years, from 1701 to 1707, vice-president of the college; and his son Joseph was president of the college from 1781 to 1804; and Concord counted fourteen graduates of Harvard in its first century, and its representation there increased with its gross population.

¶ I possess the manuscript journal of a lady, native of this town (and descended from three of its clergymen), who removed into Maine, where she possessed a farm and a modest income. She was much addicted to journeying and not less to reading, and whenever she arrived in a town where was a good minister who had a library, she would persuade him to receive her as a boarder, and would stay until she had looked over all his volumes which were to her taste. On a very cold day, she writes in her diary, "Life truly resembles a river—ever the same—never the same; and perhaps a greater variety of internal emotions would be felt by remaining with books in one place than pursuing the waves which are ever the same. Is the melancholy bird of night, covered with the dark foliage of the willow and cypress, less gratified than the gay lark amid the flowers and suns? I think that you never enjoy so much as in solitude with a book that meets the feelings," and in reference to her favorite authors, she adds, "The delight in others' superiority is my best gift from God."

MANY times the reading of a book has made the fortune of the man,—has decided his way of life. It makes friends. 'T is a tie between men to have been delighted with the same book. Every one of us is always in search of his friend, and when unexpectedly he finds a stranger enjoying the rare poet or thinker who is dear to his own solitude,—it is like finding a brother.

¶ Lemuel Shattuck, by his history of the town, has made all of us grateful to his memory as a careful student and chronicler; but events so important have occurred in the forty years since that book was published, that it now needs a second volume.

¶ Henry Thoreau we all remember as a man of genius, and of marked character, known to our farmers as the most skilful of surveyors, and indeed better acquainted with their forests and meadows and trees than themselves, but more widely known as the writer of some of the best books which have been written in this country, and which, I am persuaded, have not yet gathered half their

fame. He, too, was an excellent reader. No man would have rejoiced more than he in the event of this day. In a private letter to a lady, he writes, "Do you read any noble verses? For my part, they have been the only things I remembered, —or that which occasioned them,— when all things else were blurred and defaced. All things have put on mourning but they: for the elegy itself is some victorious melody in you, escaping from the wreck. It is a relief to read some true books wherein all are equally dead, equally alive. I think the best parts of Shakspeare would only be enhanced by the most thrilling and affecting events. I have found it so: and all the more, that they are not intended for consolation."

BOOKS are angels of entertainment, sympathy and provocation. With them many of us spend the most of our life, —these silent guides,—these tractable prophets, historians, and singers, whose embalmed life is the highest feat of art; who now cast their moonlight illumination over solitude, weariness and fallen fortunes.

¶ Nathaniel Hawthorne's residence in the Manse gave new interest to that house whose windows overlooked the retreat of the British soldiers in 1775, and his careful studies of Concord life and history are known wherever the English language is spoken.

¶ I know the word literature has in many ears a hollow sound. It is thought to be the harmless entertainment of a few fanciful persons, and not at all to be the interest of the multitude. To these objections, which proceed on the cheap notion that nothing but what grinds corn, roasts mutton and weaves cotton, is anything worth, I have little to say. There are utilitarians who prefer that Jesus should have wrought as a carpenter, and Saint Paul as a tent-maker. But literature is the record of the best thoughts. Every attainment and discipline which increases a man's acquaintance with the invisible world lifts his being. Everything that gives him a new perception of beauty multiplies his pure enjoyments. A river of thought is always running out of the invisible world into the mind of man. Shall not they who received the largest streams spread abroad the healing waters?

¶ It was the symbolical custom of the ancient Mexican priests, after the annual extinction of the household fires of their land, to procure in the temple fire from the sun, and thence distribute it as a sacred gift to every hearth in the nation. It is a just type of the service rendered to mankind by wise men. Homer and Plato and Pindar and Shakspeare serve many more than have heard their names. Thought is the most volatile of all things. It cannot be contained in any cup, though you shut the lid never so tight. Once brought into the world, it runs over the vessel which received it into all minds that love it. The very language we speak thinks for us by the subtle distinctions which already are marked for us by its words, and every one of these is the contribution of the wit of one and another sagacious man in all the centuries of time.

¶ Consider that it is our own state of mind at any time that makes our estimate of life and the world. If you sprain your foot, you will presently come to think that Nature has sprained hers. Everything begins to look so slow and inaccessible. And when you sprain your mind, by gloomy reflection on your failures and vexations, you come to have a bad opinion of life. Think how indigent Nature must appear to the blind, the deaf, and the idiot. Now if you can kindle the imagination by a new thought, by heroic histories, by uplifting poetry, instantly you expand,— are cheered, inspired, and become wise, and even prophetic. Music works this miracle for those who have a good ear;

what omniscience has music! so absolutely impersonal, and yet every sufferer feels his secret sorrow reached. Yet to a scholar the book is as good or better. There is no hour of vexation which on a little reflection will not find diversion and relief in the library. His companions are few: at the moment, he has none: but, year by year, these silent friends supply their place. Many times the reading of a book has made the fortune of the man,—has decided his way of life. It makes friends. 'T is a tie between men to have been delighted with the same book. Every one of us is always in search of his friend, and when unexpectedly he finds a stranger enjoying the rare poet or thinker who is dear to his own solitude, —it is like finding a brother. Dr. Johnson hearing that Adam Smith, whom he had once met, relished rhyme, said, "If I had known that, I should have hugged him."

¶ We expect a great man to be a good reader, or in proportion to the spontaneous power should be the assimilating power. There is a wonderful agreement among eminent men of all varieties of character and condition in their estimate of books. Julius Cæsar, when shipwrecked, and forced to swim for life, did not gather his gold, but took his Commentaries between his teeth and swam for the shore. Even the wild and warlike Arab Mahomet said, "Men are either learned or learning: the rest are blockheads." The great Duke of Marlborough could not encamp without his Shakspeare. The Duchess d'Abrantes, wife of Marshal Junot, tells us that Bonaparte, in hastening out of France to join his army in Germany, tossed his journals and books out of his travelling carriage as fast as he had read them, and strewed the highway with pamphlets. Napoleon's reading could not be large, but his criticism is sometimes admirable, as reported by Las Casas; and Napoleon was an excellent writer. Montesquieu, one of the greatest minds that France has produced, writes: "The love of study is in us almost the only eternal passion. All the others quit us in proportion as this miserable machine which gives them to us approaches its ruin. Study has been for me the sovereign remedy against the disgusts of life, never having had a chagrin which an hour of reading has not put to flight." Hear the testimony of Seldon, the oracle of the English House of Commons in Cromwell's time. "Patience is the chiefest fruit of study. A man, that strives to make himself a different thing from other men by much reading gains this chiefest good, that in all fortunes he hath something to entertain and comfort himself withal."

¶ I have found several humble men and women who gave as affectionate, if not as judicious testimony to their readings. One curious witness was that of a Shaker who, when showing me the houses of the Brotherhood, and a very modest bookshelf, said there was Milton's Paradise Lost, and some other books in the house, and added "that he knew where they were, but he took up a sound cross in not reading them."

¶ In 1618 (8th March) John Kepler came upon the discovery of the law connecting the mean distances of the planets with the periods of their revolution about the sun, that the squares of the times vary as the cubes of the distances. And he writes, "It is now eighteen months since I got the first glimpse of light,—three months since the dawn, —very few days since the unveiled sun, most admirable to gaze on, burst out upon me. Nothing holds me. I will indulge in my sacred fury. I will triumph over mankind by the honest confession that I have stolen the golden vases of the Egyptians to build up a tabernacle for my God far away from the confines of Egypt. If you forgive me, I rejoice; if you are angry, I can bear it: the die is cast; the book is written; to be read either now or by posterity. I care not which. It may well wait a century for a reader, since God has waited six thousand years for an observer like myself."

¶ In books I have the history or the energy of the past. Angels they are to us of entertainment, sympathy and

provocation. With them many of us spend the most of our life,—these silent guides,—these tractable prophets, historians, and singers, whose embalmed life is the highest feat of art; who now cast their moonlight illumination over solitude, weariness and fallen fortunes. You say, 't is a languid pleasure. Yes, but its tractableness, coming and going like a dog at our bidding, compensates the quietness, and contrasts with the slowness of fortune and the inaccessibleness of persons.

¶ You meet with a man of science, a good thinker or good wit,—but you do not know how to draw out of him that which he knows. But the book is a sure friend, always ready at your first leisure,—opens to the very page you desire, and shuts at your first fatigue,—as possibly your professor might not.

YOU meet with a man of science, a good thinker or good wit,—but you do not know how to draw out of him that which he knows. But the book is a sure friend, always ready at your first leisure,—opens to the very page you desire, and shuts at your first fatigue,—as possibly your professor might not.

¶ It is a tie between men to have read the same book, and it is a disadvantage not to have read the book your mates have read, or not to have read it at the same time, so that it may take the place in your culture it does in theirs, and you shall understand their allusions to it, and not give it more or less emphasis than they do. Yet the strong character does not need this sameness of culture. The imagination knows its own food in every pasture, and if it has not had the Arabian Nights, Prince Le Boo, or Homer or Scott, has drawn equal delight and terror from haunts and passages which you will hear of with envy.

¶ In saying these things for books, I do not for a moment forget that they are secondary, mere means, and only used in the off-hours, only in the pause, and, as it were, the sleep, or passive state of the mind. The intellect reserves all its rights. Instantly, when the mind itself wakes, all books, all past acts are forgotten, huddled aside as impertinent in the august presence of the creator. Their costliest benefit is that they set us free from themselves; for they wake the imagination and the sentiment,—and in their inspirations we dispense with books. Let me add then,—read proudly; put the duty of being read invariably on the author. If he is not read, whose fault is it? I am quite ready to be charmed,—but I shall not make believe I am charmed.

¶ But there is no end to the praise of books, to the value of the library. Who shall estimate their influence on our population where all the millions read and write? It is the joy of nations that man can communicate all his thoughts, discoveries and virtues to records that may last for centuries.

¶ But I am pleading a cause which in the event of this day has already won: and I am happy in the assurance that the whole assembly to whom I speak entirely sympathize in the feeling of this town in regard to the new Library, and its honored Founder.

Natural History of Intellect

NATURAL HISTORY OF INTELLECT

POWERS AND LAWS OF THOUGHT

I HAVE used such opportunity as I have had, and lately in London and Paris, to attend scientific lectures; and in listening to Richard Owen's masterly enumeration of the parts and laws of the human body, or Michael Faraday's explanation of magnetic powers, or the botanist's descriptions, one could not help admiring the irresponsible security and happiness of the attitude of the naturalist; sure of admiration for his facts, sure of their sufficiency. They ought to interest you; if they do not, the fault lies with you.

WHAT is life but the angle of vision? A man is measured by the angle at which he looks at objects. What is life but what a man is thinking of all day? This is his fate and his employer. Knowing is the measure of the man. By how much we know, so much we are.

¶ Then I thought—could not a similar enumeration be made of the laws and powers of the Intellect, and possess the same claims on the student? Could we have, that is, the exhaustive accuracy of distribution which chemists use in their nomenclature and anatomists in their descriptions, applied to a higher class of facts; to those laws, namely, which are common to chemistry, anatomy, astronomy, geometry, intellect, morals and social life;—laws of the world?

¶ Why not? These powers and laws are also facts in a Natural History. They also are objects of science and may be numbered and recorded, like stamens and vertebræ. At the same time they have a deeper interest, as in the order of Nature they lie higher and are nearer to the mysterious seat of power and creation.

¶ For at last, it is only that exceeding and universal part which interests us, when we shall read in a true history what befalls in that kingdom where a thousand years is as one day, and see that what is set down is true through all the sciences; in the laws of thought as well as of chemistry.

¶ In all sciences the student is discovering that Nature, as he calls it, is always working, in wholes and in every detail, after the laws of the human mind. Every creation, in parts or in particles, is on the method and by the means which our mind approves as soon as it is thoroughly acquainted with the facts; hence the delight. No matter how far or how high science explores, it adopts the method of the universe as fast as it appears; and this discloses that the mind as it opens, the mind as it shall be, comprehends and works thus; that is to say, the Intellect builds the universe and is the key to all it contains. It is not then cities or mountains, or animals, or globes that any longer commands us, but only man; not the fact, but so much of man as is in the fact.

¶ In astronomy, vast distance, but we never go into a foreign system. In geology, vast duration, but we are never strangers. Our metaphysics should be able to follow the flying force through all transformations, and name the pair identical through all variety.

¶ I believe in the existence of the material world as the expression of the spiritual or the real, and in the impenetrable mystery which hides (and hides through absolute transparency) the

mental nature, I await the insight which our advancing knowledge of material laws shall furnish.

¶ Every object in Nature is a word to signify some fact in the mind. But when that fact is not yet put into English words, when I look at the tree or the river and have not yet definitely made out what they would say to me, they are by no means unimpressive. I wait for them, I enjoy them before they yet speak. I feel as if I stood by an ambassador charged with the message of his king, which he does not deliver because the hour when he should say it is not yet arrived.

¶ Whilst we converse with truths as thoughts, they exist also as plastic forces; as the soul of a man, the soul of a plant, the genius or constitution of any part of Nature, which makes it what it is. The thought which was in the world, part and parcel of the world, has disengaged itself and taken an independent existence.

¶ My belief in the use of a course on philosophy is that the student shall learn to appreciate the miracle of the mind; shall learn its subtle but immense power, or shall begin to learn it; shall come to know that in seeing and in no tradition he must find what truth is; that he shall see in it the source of all traditions, and shall see each one of them as better or worse statement of its revelations; shall come to trust it entirely, as the only true; to cleave to God against the name of God. When he has once known the oracle he will need no priest. And if he finds at first with some alarm how impossible it is to accept many things which the hot or the mild sectarian may insist on his believing, he will be armed by his insight and brave to meet all inconvenience and all resistance it may cost him. He from whose hand it came will guide and direct it.

¶ Yet these questions which really interest men, how few can answer. Here are learned faculties of law and divinity, but would questions like these come into mind when I see them? Here are learned academies and universities, yet they have not propounded these for any prize.

¶ Seek the literary circles, the stars of fame, the men of splendor, of bon-mots, will they afford me satisfaction? I think you could not find a club of men acute and liberal enough in the world. Bring the best wits together, and they are so impatient of each other, so vulgar, there is so much more than their wit,—such follies, gluttonies, partialities, age, care, and sleep, that you shall have no academy.

¶ There is really a grievous amount of unavailableness about men of wit. A plain man finds them so heavy, dull and oppressive, with bad jokes and conceit and stupefying individualism, that he comes to write in his tablets, Avoid the great man as one who is privileged to be an unprofitable companion. For the course of things makes the scholars either egotists or worldly and jocose. In so many hundreds of superior men hardly ten or five or two from whom one can hope for a reasonable word.

¶ Go into the scientific club and harken. Each savant proves in his admirable discourse that he, and he only, knows now or ever did know anything on the subject: "Does the gentleman speak of anatomy? Who peeped into a box at the Custom House and then published a drawing of my rat?" Or is it pretended discoveries of new strata that are before the meeting? This professor hastens to inform us that he knew it all twenty years ago, and is ready to prove that he knew so much then that all further investigation was quite superfluous;—and poor Nature and the sublime law, which is all that our student cares to hear of, are quite omitted in this triumphant vindication.

¶ Was it better when we came to the philosophers, who found everybody wrong; acute and ingenious to lampoon and degrade mankind? And then was there ever prophet burdened with a message to his people who did not cloud our gratitude by a strange confounding in his own mind of private folly with his public wisdom?

¶ But if you like to run away from this

besetting sin of sedentary men, you can escape all this insane egotism by running into society, where the manners and estimate of the world have corrected this folly, and effectually suppressed this overweening self-conceit. Here each is to make room for others, and the solidest merits must exist only for the entertainment of all. We are not in the smallest degree helped. Great is the dazzle, but the gain is small. Here they play the game of conversation, as they play billiards, for pastime and credit.

¶ Yes, 't is a great vice in all countries, the sacrifice of scholars to be courtiers and diners-out, to talk for the amusement of those who wish to be amused, though the stars of heaven must be plucked down and packed into rockets to this end. What with egotism on one side and levity on the other, we shall have no Olympus.

We remember what we understand, and we understand best what we like; for this doubles our power of attention, and makes it our own.

¶ But there is still another hindrance, namely, practicality. We must have a special talent, and bring something to pass. Ever since the Norse heaven made the stern terms of admission that a man must do something excellent with his hands or feet, or with his voice, eyes, ears, or with his whole body, the same demand has been made in Norse earth.

¶ Yet what we really want is not a haste to act, but a certain piety toward the source of action and knowledge. In fact we have to say that there is a certain beatitude,—I can call it nothing less,—to which all men are entitled, tasted by them in different degrees, which is a perfection of their nature, and to which their entrance must be in every way forwarded. Practical men, though they could lift the globe, cannot arrive at this. Something very different has to be done,—the availing ourselves of every impulse of genius, an emanation of the heaven it tells of, and the resisting this conspiracy of men and material things against the sanitary and legitimate inspirations of the intellectual nature.

¶ What is life but the angle of vision? A man is measured by the angle at which he looks at objects. What is life but what a man is thinking of all day? This is his fate and his employer. Knowing is the measure of the man. By how much we know, so much we are.

¶ The laws and powers of the Intellect have, however, a stupendous peculiarity, of being at once observers and observed. So that it is difficult to hold them fast, as objects of examination, or hinder them from turning the professor out of his chair. The wonder of the science of Intellect is that the substance with which we deal is of that subtle and active quality that it intoxicates all who approach it. Gloves on the hands, glass guards over the eyes, wire-gauze masks over the face, volatile salts in the nostrils, are no defence against this virus, which comes in as secretly as gravitation into and through all barriers.

¶ Let me have your attention to this dangerous subject, which we will cautiously approach on different sides of this dim and perilous lake, so attractive, so delusive. We have had so many guides and so many failures. And now the world is still uncertain whether the pool has been sounded or not.

¶ My contribution will be simply historical. I write anecdotes of the intellect; a sort of Farmer's Almanac of mental moods. I confine my ambition to true reporting of its play in natural action, though I should get only one new fact in a year.

¶ I cannot myself use that systematic form which is reckoned essential in treating the science of the mind. But if one can say so without arrogance, I might suggest that he who contents himself with dotting a fragmentary curve, recording only what facts he has observed, without attempting to arrange them within one outline, follows a system also,—a system as grand as any other, though he does not interfere with its vast curves by prematurely forcing them into a circle or ellipse, but only draws that arc which he clearly sees, or perhaps at a later observation a remote curve of the same orbit, and waits for a new opportunity, well assured that these observed arcs will consist with each other.

¶ I confess to a little distrust of that completeness of system which metaphysicians are apt to affect. 'T is the gnat grasping the world. All these exhaustive theories appear indeed a false and vain attempt to introvert and analyze the Primal Thought. That is upstream, and what a stream! Can you swim up Niagara Falls?

¶ We have invincible repugnance to introversion, to study of the eyes instead of that which the eyes see; and the belief of men is that the attempt is unnatural and is punished by loss of faculty. I share the belief that the natural direction of the intellectual powers is from within outward, and that just in proportion to the activity of thoughts on the study of outward objects, as architecture, or farming, or natural history, ships, animals, chemistry,—in that proportion the faculties of the mind had a healthy growth; but a study in the opposite direction had a damaging effect on the mind.

¶ Metaphysics is dangerous as a single pursuit. We should feel more confidence in the same results from the mouth of a man of the world. The inward analysis must be corrected by rough experience. Metaphysics must be perpetually reinforced by life; must be the observations of a working man on working men; must be biography,—the record of some law whose working was surprised by the observer in natural action.

¶ I think metaphysics a grammar to which, once read, we seldom return. 'T is a Manila full of pepper, and I want only a teaspoonful in a year. I admire the Dutch, who burned half the harvest to enhance the price of the remainder.

¶ I want not the logic, but the power, if any, which it brings into science and literature; the man who can humanize this logic, these syllogisms, and give me the results. The adepts value only the pure geometry, the aërial bridge ascending from earth to heaven with arches and abutments of pure reason. I am fully contented if you tell me where are the two termini.

¶ My metaphysics are to the end of use. I wish to know the laws of this wonderful power, that I may domesticate it. I observe with curiosity its risings and its settings, illumination and eclipse; its obstructions and its provocations, that I may learn to live with it wisely, court its aid, catch sight of its splendor, feel its approach, hear and save its oracles and obey them. But this watching of the mind, in season and out of season, to see the mechanics of the thing, is a little of the detective. The analytic process is cold and bereaving and, shall I say it? somewhat mean, as spying. There is something surgical in metaphysics as we treat it. Were not an ode a better form? The poet sees wholes and avoids analysis; the metaphysician, dealing as it were with the mathematics of the mind, puts himself out of the way of the inspiration; loses that which is the miracle and creates the worship.

¶ I think that philosophy is still rude and elementary. It will one day be taught by poets. The poet is in the natural attitude; he is believing; the philosopher, after some struggle, having only reasons for believing.

¶ What I am now to attempt is simply some sketches or studies for such a picture; *Mémoires pour servir* toward a Natural History of Intellect.

¶ First I wish to speak of the excel-

lence of that element, and the great auguries that come from it, notwithstanding the impediments which our sensual civilization puts in the way.

¶ Next I treat of the identity of the thought with Nature; and I add a rude list of some by-laws of the mind.

¶ Thirdly I proceed to the fountains of thought in Instinct and Inspiration, and I also attempt to show the relation of men of thought to the existing religion and civility of the present time.

OUR eating, trading, marrying, and learning are mistaken by us for ends and realities, whilst they are properly symbols only; when we have come, by a divine leading, into the inner firmament, we are apprised of the unreality or representative character of what we esteemed final.

¶ I. We figure to ourselves Intellect as an ethereal sea, which ebbs and flows, which surges and washes hither and thither, carrying its whole virtue into every creek and inlet which it bathes. To this sea every human house has a water front. But this force, creating nature, visiting whom it will and withdrawing from whom it will, making day where it comes and leaving night when it departs, is no fee or property of man or angel. It is as the light, public and entire to each, and on the same terms.

¶ What but thought deepens life, and makes us better than cow or cat? The grandeur of the impression the stars and heavenly bodies make on us is surely more valuable than our exact perception of a tub or a table on the ground.

¶ To Be is the unsolved, unsolvable wonder. To Be, in its two connections of inward and outward, the mind and Nature. The wonder subsists, and age, though of eternity, could not approach a solution. But the suggestion is always returning, that hidden source publishing at once our being and that it is the source of outward Nature. Who are we, and what is Nature, have one answer in the life that rushes into us.

¶ In my thought I seem to stand on the bank of a river and watch the endless flow of the stream, floating objects of all shapes, colors and natures; nor can I much detain them as they pass, except by running beside them a little way along the bank. But whence they come or whither they go is not told me. Only I have a suspicion that, as geologists say every river makes its own valley, so does this mystic stream. It makes its valley, makes its banks and makes perhaps the observer too. Who has found the boundaries of human intelligence? Who has made a chart of its channel, or approached the fountain of this wonderful Nile?

¶ I am of the oldest religion. Leaving aside the question which was prior, egg or bird, I believe the mind is the creator of the world, and is ever creating;—that at last Matter is dead Mind; that mind makes the senses it sees with; that the genius of man is a continuation of the power that made him and that has not done making him.

¶ I dare not deal with this element in its pure essence. It is too rare for the wings of words. Yet I see that Intellect is a science of degrees, and that as man is conscious of the law of vegetable and animal nature, so he is aware of an Intellect which overhangs his consciousness like a sky, of degree above degree, of heaven within heaven.

¶ Every just thinker has attempted to indicate these degrees, these steps on the heavenly stair, until he comes to light where language fails him. Above the thought is the higher truth,—truth as yet undomesticated and therefore unformulated.

¶ It is a steep stair down from the essence of Intellect pure to thoughts and

intellections. As the sun is conceived to have made our system by hurling out from itself the outer rings of diffuse ether which slowly condensed into earths and moons, by a higher force of the same law the mind detaches minds, and a mind detaches thoughts or intellections. These again all mimic in their sphericity the first mind, and share its power.

¶ Life is incessant parturition. There are viviparous and oviparous minds; minds that produce their thoughts complete men, like armed soldiers, ready and swift to go out to resist and conquer all the armies of error, and others that deposit their dangerous unripe thoughts here and there to lie still for a time and be brooded in other minds, and the shell not be broken until the next age, for them to begin, as new individuals, their career.

IN unfit company the finest powers are paralyzed. No ambition, no opposition, no friendly attention and fostering kindness, no wine, music or exhilarating aids, neither warm fireside nor fresh air, walking or riding, avail at all to resist the palsy of mis-association. Ask of your flowers to open when you have let in on them a freezing wind.

¶ The perceptions of a soul, its wondrous progeny, are born by the conversation, the marriage of souls; so nourished, so enlarged. They are detached from their parent, they pass into other minds; ripened and unfolded by many they hasten to incarnate themselves in action, to take body, only to carry forward the will which sent them out. They take to themselves wood and stone and iron; ships and cities and nations and armies of men and ages of duration; the pomps of religion, the armaments of war, the codes and heraldry of states; agriculture, trade, commerce;—these are the ponderous instrumentalities into which the nimble thoughts pass, and which they animate and alter, and presently, antagonized by other thoughts which they first aroused, or by thoughts which are sons and daughters of these, the thought buries itself in the new thought of larger scope, whilst the old instrumentalities and incarnations are decomposed and recomposed into new.

¶ Our eating, trading, marrying, and learning are mistaken by us for ends and realities, whilst they are properly symbols only; when we have come, by a divine leading, into the inner firmament, we are apprised of the unreality or representative character of what we esteemed final.

¶ So works the poor little blockhead manikin. He must arrange and dignify his shop or farm the best he can. At last he must be able to tell you it, or write it, translate it all clumsily enough into the new sky-language he calls thought. He cannot help it, the irresistible meliorations bear him forward.

¶ II. Whilst we consider this appetite of the mind to arrange its phenomena, there is another fact which makes this useful. There is in Nature a parallel unity which corresponds to the unity in the mind and makes it available. This methodizing mind meets no resistance in its attempts. The scattered blocks, with which it strives to form a symmetrical structure, fit. This design following after finds with joy that like design went before. Not only man puts things in a row, but things belong in a row.

¶ It is certain that however we may conceive of the wonderful little bricks of which the world is builded, we must suppose a similarity and fitting and identity in their frame. It is necessary to suppose that every hose in Nature fits every hydrant; so only is combination, chemistry, vegetation, animation, intellection possible. Without identity at base, chaos must be forever.

¶ And as mind, our mind or mind like ours, reappears to us in our study of Nature, Nature being everywhere formed

after a method which we can well understand, and all the parts, to the most remote, allied or explicable,—therefore our own organization is a perpetual key, and a well-ordered mind brings to the study of every new fact or class of facts a certain divination of that which it shall find.

¶ This reduction to a few laws, to one law, is not a choice of the individual, it is the tyrannical instinct of the mind. There is no solitary flower and no solitary thought. It comes single like a foreign traveller,—but find out its name, and it is related to a powerful and numerous family. Wonderful is their working and relation each to each. We hold them as lanterns to light each other and our present design. Every new thought modifies, interprets old problems. The retrospective value of each new thought is immense, like a torch applied to a long train of gunpowder. To be isolated is to be sick, and in so far, dead. The life of the All must stream through us to make the man and the moment great.

HEREIN is the wealth of each. His equipment, though new, is complete; his prudence is his own; his courage, his charity, are his own. He has his own defences and his own fangs; his perception and his own mode of reply to sophistries. Whilst he draws on his own he cannot be overshadowed or supplanted.

¶ Well, having accepted this law of identity pervading the universe, we next perceive that whilst every creature represents and obeys it, there is diversity, there is more or less of power; that the lowest only means incipient form, and over it is a higher class in which its rudiments are opened, raised to higher powers; that there is development from less to more, from lower to superior function, steadily ascending to man.

¶ If man has organs for breathing, for sight, for locomotion, for taking food, for digesting, for protection by house-building, by attack and defence, for reproduction and love and care of his young, you shall find all the same in the muskrat. There is a perfect correspondence; or 't is only man modified to live in a mud-bank. A fish in like manner is man furnished to live in the sea; a thrush, to fly in the air; and a mollusk is a cheap edition with a suppression of the costlier illustrations, designed for dingy circulation, for shelving in an oyster-bank or among the seaweed.

¶ If we go through the British Museum or the Jardin des Plantes in Paris, or any cabinet where is some representation of all the kingdoms of Nature, we are surprised with occult sympathies; we feel as if looking at our bone and flesh through coloring and distorting glasses. Is it not a little startling to see with what genius some people take to h u n t i n g, with what genius some people fish,—what knowledge they still have of the creature they hunt? The robber, as the police reports say, must have been intimately acquainted with the premises. How lately the hunter was the poor creature's organic enemy; a presumption *inflamed*, as the lawyers say, by observing how many faces in the street still remind us of visages in the forest,—the escape from the quadruped type not yet perfectly accomplished.

¶ From whatever side we look at Nature we seem to be exploring the figure of a disguised man. How obvious is the momentum, in our mental history! The momentum, which increases by exact laws in falling bodies, increases by the same rate in the intellectual action. Every scholar knows that he applies himself coldly and slowly at first to his task, but, with the progress of the work, the mind itself becomes heated, and sees far and wide as it approaches the end, so that it is the com-

mon remark of the student, Could I only have begun with the same fire which I had on the last day, I should have done something.

¶ The affinity of particles accurately translates the affinity of thoughts, and what a modern experimenter calls "the contagious influence of chemical action" is so true of mind that I have only to read the law that its application may be evident: "A body in the act of combination or decomposition enables another body, with which it may be in contact, to enter into the same state." And if one remembers how contagious are the moral states of men, how much we are braced by the presence and actions of any Spartan soul, it does not need vigor of our own kind, but the spectacle of vigor of any kind, any prodigious power of performance wonderfully arms and recruits us. There are those who disputing will make you dispute, and the nervous and hysterical and animalized will produce a like series of symptoms in you, though no other persons ever evoke the like phenomena, and though you are conscious that they do not properly belong to you, but are a sort of extension of the diseases of this particular person into you.

¶ The idea of vegetation is irresistible in considering mental activity. Man seems a higher plant. What happens here in mankind is matched by what happens out there in the history of grass and wheat. This curious resemblance repeats, in the mental function, the germination, growth, state of melioration, crossings, blight, parasites, and in short all the accidents of the plant. Under every leaf is the bud of a new leaf, and not less under every thought is a newer thought. The plant absorbs much nourishment from the ground in order to repair its own waste by exhalation, and keep itself good. Increase its food and it becomes fertile. The mind is first only receptive. Surcharge it with thoughts in which it delights and it becomes active. The moment a man begins not to be convinced, that moment he begins to convince.

¶ In the orchard many trees send out a moderate shoot in the first summer heat, and stop. They look all summer as if they would presently burst into bud again, but they do not. The fine tree continues to grow. The same thing happens in the man. Every man has material enough in his experience to exhaust the sagacity of Newton in working it out. We have more than we use. I never hear a good speech at caucus or at cattle-show but it helps me, not so much by adding to my knowledge as by apprising me of admirable uses to which what I know can be turned. The commonest remark, if the man could only extend it a little, would make him a genius; but the thought is prematurely checked, and grows no more. All great masters are chiefly distinguished by the power of adding a second, a third, and perhaps a fourth step in a continuous line. Many a man had taken the first step. With every additional step you enhance immensely the value of your first.

¶ The botanist discovered long ago that Nature loves mixtures, and that nothing grows well on the crab-stock, but the blood of two trees being mixed a new and excellent fruit is produced. And not less in human history aboriginal races are incapable of improvement; the dull, melancholy Pelasgi arrive at no civility until the Phœnicians and Ionians come in. The Briton, the Pict, is nothing until the Roman, the Saxon, the Norman, arrives.

¶ It is observed that our mental processes go forward even when they seem suspended. Scholars say that if they return to the study of a new language after some intermission, the intelligence of it is more and not less. A subject of thought to which we return from month to month, from year to year, has always some ripeness of which we can give no account. We say the book grew in the author's mind.

¶ In unfit company the finest powers are paralyzed. No ambition, no opposition, no friendly attention and fostering kindness, no wine, music or exhilarating aids, neither warm fireside nor fresh air, walking or riding, avail at all

to resist the palsy of mis-association. Genius is mute, is dull; there is no genius. Ask of your flowers to open when you have let in on them a freezing wind.

¶ The mechanical laws might as easily be shown pervading the kingdom of mind as the vegetative. A man has been in Spain. The facts and thoughts which the traveller has found in that country gradually settle themselves into a determinate heap of one size and form and not another. That is what he knows and has to say of Spain; he cannot say it truly until a sufficient time for the arrangement of the particles has elapsed.

¶ These views of the source of thought and the mode of its communication lead us to a whole system of ethics, strict as any department of human duty, and open to us the tendencies and duties of men of thought in the present time.

THERE is no solitary flower and no solitary thought. It comes single like a foreign traveller,—but find out its name, and it is related to a powerful and numerous family. To be isolated is to be sick, and in so far, dead. The life of the All must stream through us to make the man and the moment great.

¶ Wisdom is like electricity. There is no permanent wise man, but men capable of wisdom, who, being put into certain company or other favorable conditions, become wise, as glasses rubbed acquire power for a time.

¶ An individual body is the momentary arrest or fixation of certain atoms, which, after performing compulsory duty to this enchanted statue, are released again to flow in the currents of the world. An individual mind in like manner is a fixation or momentary eddy in which certain services and powers are taken up and minister in petty niches and localities, and then, being released, return to the unbounded soul of the world.

¶ In this eternal resurrection and rehabilitation of transitory persons, who and what are they? 'T is only the source that we can see;—the eternal mind, careless of its channels, omnipotent in itself, and continually ejaculating its torrent into every artery and vein and veinlet of humanity. Wherever there is health, that is, consent to the cause and constitution of the universe, there is perception and power.

¶ Each man is a new power in Nature. He holds the keys of the world in his hands. No quality in Nature's vast magazines he cannot touch, no truth he cannot see. Silent, passive, even sulkily, Nature offers every morning her wealth to man. She is immensely rich; he is welcome to her entire goods, but she speaks no word, will not so much as beckon or cough; only this, she is careful to leave all her doors ajar,—towers, hall, storeroom and cellar. If he takes her hint and uses her goods she speaks no word; if he blunders and starves she says nothing. To the idle blockhead Nature is poor, sterile, inhospitable. To the gardener her loam is all strawberries, pears, pineapples. To the miller her rivers whirl the wheel and weave carpets and broadcloth. To the sculptor her stone is soft; to the painter her plumbago and marl are pencils and chromes. To the poet all sounds and words are melodies and rhythms. In her hundred-gated Thebes every chamber is a new door.

¶ But he enters the world by one key. Herein is the wealth of each. His equipment, though new, is complete; his prudence is his own; his courage, his charity, are his own. He has his own defences and his own fangs; his perception and his own mode of reply to sophistries. Whilst he draws on his own he cannot be overshadowed or supplanted.

¶ There are two mischievous superstitions, I know not which does the most harm, one, that "I am wiser than you,"

and the other that "You are wiser than I." The truth is that every man is furnished, if he will heed it, with wisdom necessary to steer his own boat,—if he will not look away from his own to see how his neighbor steers his.

¶ Every man is a new method and distributes things anew. If he could attain full size he would take up, first or last, atom by atom, all the world into a new form. And our deep conviction of the riches proper to every mind does not allow us to admit of much looking over into one another's virtues. Let me whisper a secret; nobody ever forgives any admiration in you of them, any overestimate of what they do or have. I acquiesce to be that I am, but I wish no one to be civil to me.

¶ Strong men understand this very well. Power fraternizes with power, and wishes you not to be like him but like yourself. Echo the leaders and they will fast enough see that you have nothing for them. They came to you for something they had not.

¶ There is always a loss of truth and power when a man leaves working for himself to work for another. Absolutely speaking, I can only work for myself. All my good is magnetic, and I educate not by lessons but by going about my business. When, moved by love, a man teaches his child or joins with his neighbor in any act of common benefit, or spends himself for his friend, or rushes at immense personal sacrifice on some public, self-immolating act, it is not done for others, but to fulfil a high necessity of his proper character. The benefit to others is contingent and not contemplated by the doer.

¶ The one thing not to be forgiven to intellectual persons is that they believe in the ideas of others. From this deference comes the imbecility and fatigue of their society, for of course they cannot affirm these from the deep life; they say what they would have you believe, but what they do not quite know. Profound sincerity is the only basis of talent as of character. The temptation is to patronize Providence, to fall into the accepted ways of talking and acting of the good sort of people.

¶ Each has a certain aptitude for knowing or doing somewhat which, when it appears, is so adapted and aimed on that, that it seems a sort of obtuseness to everything else. Well, this aptitude, if he would obey it, would prove a telescope to bring under his clear vision what was blur to everybody else. 'T is a wonderful instrument, an organic sympathy with the whole frame of things. There is no property or relation in that immense arsenal of forces which the earth is, but some man is at last found who affects this, delights to unfold and work it, as if he were the born publisher and demonstrator of it.

¶ As a dog has a sense that you have not, to find the track of his master or of a fox, and as each tree can secrete from the soil the elements that form a peach, a lemon, or a cocoa-nut, according to its kind, so individual men have secret senses, each some incommunicable sagacity. And men are primary or secondary as their opinions and actions are organic or not.

¶ I know well what a sieve every ear is. Teach me never so much and I hear or retain only that which I wish to hear, what comports with my experience and my desire. Many eyes go through the meadow, but few see the flowers. A hunter finds plenty of game on the ground you have sauntered over with idle gun. White huckleberries are so rare that in miles of pasture you shall not find a dozen. But a girl who understands it will find you a pint in a quarter of an hour.

¶ Though the world is full of food we can take only the crumbs fit for us. The air rings with sounds, but only a few vibrations can reach our tympanum. Perhaps creatures live with us which we never see, because their motion is too swift for our vision. The sun may shine, or a galaxy of suns; you will get no more light than your eye will hold. What can Plato or Newton teach, if you are deaf or incapable? A mind does not receive truth as a chest receives jewels that are put into it, but as the stomach takes up food into the system.

It is no longer food, but flesh, and is assimilated. The appetite and the power of digestion measure our right to knowledge. He has it who can use it. As soon as our accumulation overruns our invention or power to use, the evils of intellectual gluttony begin,—congestion of the brain, apoplexy and strangulation.

¶ III. In reckoning the sources of our mental power it were fatal to omit that one which pours all the others into its mould;—that unknown country in which all the rivers of our knowledge have their fountains, and which, by its qualities and structure, determines both the nature of the waters and the direction in which they flow.

¶ The healthy mind lies parallel to the currents of Nature and sees things in place, or makes discoveries. Newton did not exercise more ingenuity but less than another to see the world. Right thought comes spontaneously, comes like the morning wind; comes daily, like our daily bread, to humble service; comes duly to those who look for it. It does not need to pump your brains and force thought to think rightly. Oh no, the ingenious person is warped by his ingenuity and mis-sees.

¶ Instinct is our name for the potential wit. Each man has a feeling that what is done anywhere is done by the same wit as his. All men are his representatives, and he is glad to see that his wit can work at this or that problem as it ought to be done, and better than he could do it. We feel as if one man wrote all the books, painted, built, in dark ages; and we are sure that it can do more than ever was done. It was the same mind that built the world. That is Instinct.

¶ Ask what the Instinct declares, and we have little to say. He is no newsmonger, no disputant, no talker. 'T is a taper, a spark in the great night. Yet a spark at which all the illuminations of human arts and sciences were kindled. This is that glimpse of inextinguishable light by which men are guided: though it does not show objects, yet it shows the way. This is that sense by which men feel when they are wronged, though they do not see how. This is that source of thought and feeling which acts on masses of men, on all men at certain times with resistless power. Ever at intervals leaps a word or fact to light which is no man's invention, but the common instinct, making the revolutions that never go back.

¶ This is Instinct, and Inspiration is only this power excited, breaking its silence; the spark bursting into flame. Instinct is a shapeless giant in the cave, massive, without hands or fingers or articulating lips or teeth or tongue; Behemoth, disdaining speech, disdaining particulars, lurking, surly, invincible, disdaining thoughts, always whole, never distributed, aboriginal, old as Nature, and saying, like poor Topsy, "never was born; growed." Indifferent to the dignity of its function, it plays the god in animal nature as in human or as in the angelic, and spends its omniscience on the lowest wants. The old Hindoo Gautama says, "Like the approach of the iron to the loadstone is the approach of the new-born child to the breast." There is somewhat awful in that first approach.

¶ The Instinct begins at this low point, at the surface of the earth, and works for the necessities of the human being; then ascends step by step to suggestions which are when expressed the intellectual and moral laws.

¶ The mythology cleaves close to Nature; and what else was it they represented in Pan, god of shepherds, who was not yet completely finished in god-like form, blocked rather, and wanting the extremities; had emblematic horns and feet? Pan, that is, All. His habit was to dwell in mountains, lying on the ground, tooting like a cricket in the sun, refusing to speak, clinging to his behemoth ways. He could intoxicate by the strain of his shepherd's pipe—silent yet to most, for his pipes make the music of the spheres, which, because it sounds eternally, is not heard at all by the dull, but only by the mind. He wears a coat of leopard spots or stars.

He could terrify by earth-born fears called *panics*. Yet was he in the secret of Nature and could look both before and after. He was only seen under disguises, and was not represented by any outward image; a terror sometimes, at others a placid omnipotence.

¶ Such homage did the Greek—delighting in accurate form, not fond of the extravagant and unbounded — pay to the unscrutable force we call Instinct, or Nature when it first becomes intelligent.

¶ The action of the Instinct is for the most part negative, regulative, rather than initiative or impulsive. But it has a range as wide as human nature, running over all the ground of morals, of intellect and of sense. In its lower function, when it deals with the apparent world, it is common sense. It requires the performance of all that is needful to the animal life and health. Then it requires a proportion between a man's acts and his condition, requires all that is called humanity; that symmetry and connection which is imperative in all healthily constituted men, and the want of which the rare and brilliant sallies of irregular genius cannot excuse.

¶ If we could retain our early innocence, we might trust our feet uncommanded to take the right path to our friend in the woods. But we have interfered too often; the feet have lost, by our distrust, their proper virtue, and we take the wrong path and miss him. 'T is the barbarian instinct within us which culture deadens.

¶ We find ourselves expressed in Nature, but we cannot translate it into words. But Perception is the armed eye. A civilization has tamed and ripened this savage wit, and he is a Greek. His Aye and No have become nouns and verbs and adverbs. Perception differs from Instinct by adding the Will. Simple percipiency is the virtue of space, not of man.

NOBODY ever forgives any over-estimate of what they do or have. Power fraternizes with power, and wishes you not to be like him but like yourself.

¶ The senses minister to a mind they do not know. At a moment in our history the mind's eye opens and we become aware of spiritual facts, of rights, of duties, of thoughts,—a thousand faces of one essence. We call the essence Truth; the particular aspects of it we call thoughts. These facts, this essence, are not new; they are old and eternal, but our seeing of them is new. Having seen them we are no longer brute lumps whirled by Fate, but we pass into the council-chamber and government of Nature. In so far as we see them we share their life and sovereignty.

¶ The point of interest is here, that these gates, once opened, never swing back. The observers may come at their leisure, and do at last satisfy themselves of the fact. The thought, the doctrine, the right hitherto not affirmed is published in set propositions, in conversation of scholars and philosophers, of men of the world, and at last in the very choruses of songs. The young hear it, and as they have never fought it, never known it otherwise, they accept it, vote for it at the polls, embody it in the laws. And the perception thus satisfied reacts on the senses, to clarify them, so that it becomes more indisputable.

¶ This is the first property of the Intellect I am to point out; the mind detaches. A man is intellectual in proportion as he can make an object of every sensation, perception and intuition; so long as he has no engagement in any thought or feeling which can hinder him from looking at it as somewhat foreign.

¶ A man of talent has only to name any form or fact with which we are most familiar, and the strong light which he throws on it enhances it to all eyes. People wonder they never saw it before. The detachment consists in seeing it under a new order, not under

a personal but under a universal light. To us it had economic, but to the universe it has poetic relations, and it is as good as sun and star now. Indeed, this is the measure of all intellectual power among men, the power to complete this detachment, the power of genius to hurl a new individual into the world.

¶ An intellectual man has the power to go out of himself and see himself as an object; therefore his defects and delusions interest him as much as his successes. He not only wishes to succeed in life, but he wishes in thought to know the history and destiny of a man; whilst the cloud of egotists drifting about are only interested in a success to their egotism.

A MIND does not receive truth as a chest receives jewels that are put into it, but as the stomach takes up food into the system. It is no longer food, but flesh, and is assimilated. The appetite and the power of digestion measure our right to knowledge. He has it who can use it.

¶ The senses report the new fact or change; the mind discovers some essential copula binding this fact or change to a class of facts or changes, and enjoys the discovery as if coming to its own again. A perception is always a generalization. It lifts the object, whether in material or moral nature, into a type. The animal, the low degrees of intellect, know only individuals. The philosopher knows only laws. That is, he considers a purely mental fact, part of the soul itself. We say with Kenelm Digby, "All things that she knoweth are herself, and she is all that she knoweth." Insight assimilates the thing seen. Is it only another way of affirming and illustrating this to say that it sees nothing alone, but sees each particular object in just connections,—sees all in God? In all healthy souls is an inborn necessity of presupposing for each particular fact a prior Being which compels it to a harmony with all other natures. The game of Intellect is the perception that whatever befalls or can be stated is a universal proposition; and contrariwise, that every general statement is poetical again by being particularized or impersonated.

¶ A single thought has no limit to its value; a thought, properly speaking,—that is a truth held not from any man's saying so, or any accidental benefit or recommendation it has in our trade or circumstance, but because we have perceived it is a fact in the nature of things, and in all times and places will and must be the same thing,—is of inestimable value. Every new impression on the mind is not to be derided, but is to be accounted for, and, until accounted for, registered as an indisputable addition to our catalogue of natural facts.

¶ The first fact is the fate in every mental perception,—that my seeing this or that, and that I see it so or so, is as much a fact in the natural history of the world as is the freezing of water at thirty-two degrees of Fahrenheit. My percipiency affirms the presence and perfection of law, as much as all the martyrs. A perception, it is of a necessity older than the sun and moon, and the Father of the Gods. It is there with all its destinies. It is its nature to rush to expression, to rush to embody itself. It is impatient to put on its sandals and be gone on its errand, which is to lead to a larger perception, and so to new action. For thought exists to be expressed. That which cannot externize itself is not thought.

¶ Do not trifle with your perceptions, or hold them cheap. They are your door to the seven heavens, and if you pass it by you will miss your way. Say, what impresses me ought to impress me. I am bewildered by the immense variety of attractions and cannot take a step; but this one thread, fine as gossamer,

is yet real; and I hear a whisper, which I dare trust, that it is the thread on which the earth and the heaven of heavens are strung.

¶ The universe is traversed by paths or bridges or stepping-stones across the gulfs of space in every direction. To every soul that is created is its path, invisible to all but itself. Each soul, therefore, walking in its own path walks firmly; and to the astonishment of all other souls, who see not its path, it goes as softly and playfully on its way as if, instead of being a line, narrow as the edge of a sword, over terrific pits right and left, it were a wide prairie.

¶ Genius is a delicate sensibility to the laws of the world, adding the power to express them again in some new form. The highest measure of poetic power is such insight and faculty to fuse the circumstances of to-day as shall make transparent the whole web of circumstance and opinion in which the man finds himself, so that he releases himself from the traditions in which he grew,—no longer looks back to Hebrew or Greek or English use or tradition in religion, laws or life, but sees so truly the omnipresence of eternal cause that he can convert the daily and hourly event of New York, of Boston, into universal symbols. I owe to genius always the same debt, of lifting the curtain from the common and showing me that gods are sitting disguised in every company.

¶ The conduct of Intellect must respect nothing so much as preserving the sensibility. My measure for all subjects of science as of events is their impression on the soul. That mind is best which is most impressionable. There are times when the cawing of a crow, a weed, a snow-flake, a boy's willow whistle, or a farmer planting in his field is more suggestive to the mind than the Yosemite gorge or the Vatican would be in another hour. In like mood an old verse, or certain words, gleam with rare significance.

¶ But sensibility does not exhaust our idea of it. That is only half. Genius is not a lazy angel contemplating itself and things. It is insatiable for expression. Thought must take the stupendous step of passing into realization. A master can formulate his thought. Our thoughts at first possess us. Later, if we have good heads, we come to possess them. We believe that certain persons add to the common vision a certain degree of control over these states of mind; that the true scholar is one who has the power to stand beside his thoughts or to hold off his thoughts at arm's length and give them perspective.

¶ It is not to be concealed that the gods have guarded this privilege with costly penalty. This slight discontinuity which perception effects between the mind and the object paralyzes the will. If you cut or break in two a block or stone and press the two parts closely together, you can indeed bring the particles very near, but never again so near that they shall attract each other so that you can take up the block as one. That indescribably small interval is as good as a thousand miles, and has forever severed the practical unity. Such is the immense deduction from power by discontinuity.

¶ The intellect that sees the interval partakes of it, and the fact of intellectual perception severs once for all the man from the things with which he converses. Affection blends, intellect disjoins subject and object. For weal or woe we clear ourselves from the thing we contemplate. We grieve but are not the grief; we love but are not love. If we converse with low things, with crimes, with mischances, we are not compromised. And if with high things, with heroic actions, with virtues, the interval becomes a gulf and we cannot enter into the highest good. Artist natures do not weep. Goethe, the surpassing intellect of modern times, apprehends the spiritual but is not spiritual.

¶ There is indeed this vice about men of thought, that you cannot quite trust them; not as much as other men of the same natural probity, without intellect; because they have a handkering to play Providence and make a distinction in

favor of themselves from the rules they apply to the human race.

¶ The primary rule for the conduct of Intellect is to have control of the thoughts without losing their natural attitudes and action. They are the oracle; we are not to poke and drill and force, but to follow them. Yet the spirits of the prophets are subject to the prophets. You must formulate your thought or 't is all sky and no stars. There are men of great apprehension, discursive minds, who easily entertain ideas, but are not exact, severe with themselves, cannot connect or arrange their thoughts so as effectively to report them. A blending of these two—the intellectual perception of truth and the moral sentiment of right—is wisdom. All thought is practical. Wishing is one thing; will another. Wishing is castle-building; the dreaming about things agreeable to the senses, but to which we have no right. Will is the advance to that which rightly belongs to us, to which the inward magnet ever points, and which we dare to make ours. The revelation of thought takes us out of servitude into freedom. So does the sense of right.

¶ Will is the measure of power. To a great genius there must be a great will. If the thought is not a lamp to the will, does not proceed to an act, the wise are imbecile. He alone is strong and happy who has a will. The rest are herds. He uses; they are used. He is of the Maker; they are of the Made.

¶ Will is always miraculous, being the presence of God to men. When it appears in a man he is a hero, and all metaphysics are at fault. Heaven is the exercise of the faculties, the added sense of power.

¶ All men know the truth, but what of that? It is rare to find one who knows how to speak it. A man tries to speak it and his voice is like the hiss of a snake, or rude and chiding. The truth is not spoken but injured. The same thing happens in power to do the right. His rectitude is ridiculous. His organs do not play him true.

¶ There is a meter which determines the constructive power of man,—this, namely, the question whether the mind possesses the control of its thoughts, or they of it. The new sect stands for certain thoughts. We go to individual members for an exposition of them Vain expectation. They are possessed by the ideas but do not possess them. One meets contemplative men who dwell in a certain feeling and delight which are intellectual but wholly above their expression. They cannot formulate. They impress those who know them by their loyalty to the truth they worship but cannot impart. Sometimes the patience and love are rewarded by the chamber of power being at last opened; but sometimes they pass away dumb, to find it where all obstruction is removed.

¶ By and by comes a facility; some one that can move the mountain and build of it a causeway through the Dismal Swamp, as easily as he carries the hair on his head. Talent is habitual facility of execution. We like people who can do things. The various talents are organic, or each related to that part of nature it is to explore and utilize. Somewhat is to come to the light, and one was created to fetch it,—a vessel of honor or of dishonor. 'T is of instant use in the economy of the Cosmos, and the more armed and biassed for the work the better.

¶ Each of these talents is born to be unfolded and set at work for the use and delight of men, and, in the last results, the man with the talent is the need of mankind; the whole ponderous machinery of the state has really for its aim just to place this skill of each.

¶ But idea and execution are not often intrusted to the same head. There is some incompatibility of good speculation and practice, for example, the failure of monasteries and Brook Farms. To hammer out phalanxes must be done by smiths; as soon as the scholar attempts it, he is half a charlatan.

¶ The grasp is the main thing. Most men's minds do not grasp anything. All slips through their fingers, like the pal-

try brass grooves that in most country houses are used to raise or drop the curtain, but are made to sell, and will not hold any curtain but cobwebs. I have heard that idiot children are known from their birth by the circumstance that their hands do not close round anything. Webster naturally and always grasps, and therefore retains something from every company and circumstance.

¶ As a talent Dante's imagination is the nearest to hands and feet that we have seen. He clasps the thought as if it were a tree or a stone, and describes as mathematically. I once found Page the painter modelling his figures in clay, Ruth and Naomi, before he painted them on canvas. Dante, one would say, did the same thing before he wrote the verses.

AN intellectual man has the power to go out of himself and see himself as an object; therefore his defects and delusions interest him as much as his successes. He not only wishes to succeed in life, but he wishes in thought to know the history and destiny of a man.

¶ I have spoken of Intellect constructive. But it is in degrees. How it moves when its pace is accelerated! The pace of Nature is so slow. Why not from strength to strength, from miracle to miracle, and not as now with this retardation—as if Nature had sprained her foot—and plenteous stopping at little stations?

¶ The difference is obvious enough in Talent between the speed of one man's action above another's. In debate, in legislature, not less in action; in war or in affairs, alike daring and effective. But I speak of it in quite another sense, namely, in the habitual speed of combination of thought.

¶ The same functions which are perfect in our quadrupeds are seen slower performed in palæontology. Many races it cost them to achieve the completion that is now in the life of one. Life had not yet so fierce a glow.

¶ Shakspeare astonishes by his equality in every play, act, scene or line. One would say he must have been a thousand years old when he wrote his first line, so thoroughly is his thought familiar to him, and has such scope and so solidly worded, as if it were already a proverb and not hereafter to become one. Well, that millennium in effect is really only a little acceleration in his process of thought.

¶ But each power is commonly at the expense of some other. When pace is increased it will happen that the control is in a degree lost. Reason does not keep her firm seat. The Delphian prophetess, when the spirit possesses her, is herself a victim. The excess of individualism, when it is not corrected or subordinated to the Supreme Reason, makes that vice which we stigmatize as monotones, men of one idea, or, as the French say, *enfant perdu d'une conviction isolée*, which give such a comic tinge to all society. Every man has his theory, true, but ridiculously overstated. We are forced to treat a great part of mankind as if they were a little deranged. We detect their mania and humor it, so that conversation soon becomes a tiresome effort.

¶ You laugh at the monotones, at the men of one idea, but if we look nearly at heroes we may find the same poverty; and perhaps it is not poverty, but power. The secret of power, intellectual or physical, is concentration, and all concentration involves of necessity a certain narrowness. It is a law of Nature that he who looks at one thing must turn his eyes from every other thing in the universe. The horse goes better with blinders, and the man for dedication to his task. If you ask what compensation is made for the inevitable narrowness, why, this, that in learning one thing

well you learn all things.

¶ Immense is the patience of Nature. You say thought is a penurious rill. Well, we can wait. Nature is immortal, and can wait. Nature having for capital this rill, drop by drop, as it trickles from the rock of ages,—this rill and her patience,—she husbands and hives, she forms reservoirs, were it only a phial or a hair-tube that will hold as it were a drop of attar. Not having enough to support all the powers of a race, she thins all her stock and raises a few individuals, or only a pair. Not sufficing to feed all the faculties synchronously, she feeds one faculty and starves all the rest. I am familiar with cases, we meet them daily, wherein the vital force being insufficient for the constitution, everything is neglected that can be spared; some one power fed, all the rest pine. 'T is like a withered hand or leg on a Hercules. It makes inconvenience in society, for we presume symmetry, and because they know one thing, we defer to them in another, and find them really contemptible. We can't make a half bow and say, I honor and despise you. But Nature can; she whistles with all her winds, and does as she pleases.

GENIUS is not a lazy angel contemplating itself and things. It is insatiable for expression. Thought must take the stupendous step of passing into realization. A master can formulate his thought. Our thoughts at first possess us. Later, if we have good heads, we come to possess them.

¶ It is much to write sentences; it is more to add method and write out the spirit of your life symmetrically. But to arrange general reflections in their natural order, so that I shall have one homogeneous piece,—a Lycidas, an Allegro, a Hamlet, a Midsummer Night's Dream,—this continuity is for the great. The wonderful men are wonderful hereby. Such concentration of experiences is in every great work, which, though successive in the mind of the master were primarily combined in his piece.

¶ But what we want is consecutiveness. 'T is with us a flash of light, then a long darkness, then a flash again. Ah! could we turn these fugitive sparkles into an astronomy of Copernican worlds.

¶ I must think this keen sympathy, this thrill of awe with which we watch the performance of genius, a sign of our own readiness to exert the like power. I must think we are entitled to powers far transcending any that we possess; that we have in the race the sketch of a man which no individual comes up to.

¶ Every sincere man is right, or, to make him right, only needs a little larger dose of his own personality. Excellent in his own way by means of not apprehending the gift of another. When he speaks out of another's mind, we detect it. He can't make any paint stick but his own. No man passes for that with another which he passes for with himself. The respect and the censure of his brother are alike injurious and irrelevant. We see ourselves; we lack organs to see others, and only squint at them.

¶ Don't fear to push these individualities to their farthest divergence. Characters and talents are complemental and suppletory. The world stands by balanced antagonisms. The more the peculiarities are pressed, the better the result. The air would rot without lightning; and without the violence of direction that men have, without bigots, without men of fixed idea, no excitement, no efficiency.

¶ The novelist should not make any character act absurdly, but only absurdly as seen by others. For it is so in

life. Nonsense will not keep its unreason if you come into the humorist's point of view, but unhappily we find it is fast becoming sense, and we must flee again into the distance if we would laugh.

¶ What strength belongs to every plant and animal in Nature. The tree or the brook has no duplicity, no pretentiousness, no show. It is, with all its might and main, what it is, and makes one and the same impression and effect at all times. All the thoughts of a turtle are turtles, and of a rabbit, rabbits. But a man is broken and dissipated by the giddiness of his will; he does not throw himself into his judgments; his genius leads him one way, but 't is likely his trade or politics in quite another. He rows with one hand and with the other backs water, and does not give to any manner of life the strength of his constitution. Hence the perpetual loss of power and waste of human life.

¶ The natural remedy against this miscellany of knowledge and aim, this desultory universality of ours, this immense ground-juniper falling abroad and not gathered up into any columnar tree, is to substitute realism for sentimentalism; a certain recognition of the simple and terrible laws which, seen or unseen, pervade and govern.

¶ You will say this is quite axiomatic and a little too true. I do not find it an agreed point. Literary men for the most part have a settled despair as to the realization of ideas in their own time. There is in all students a distrust of truth, a timidity about affirming it; a wish to patronize Providence.

¶ We disown our debt to moral evil. To science there is no poison; to botany no weed; to chemistry no dirt. The curses of malignity and despair are important criticism, which must be heeded until he can explain and rightly silence them.

¶ *"Croyez moi, l'erreur aussi a son mérite,"* said Voltaire. We see those who surmount by dint of egotism or infatuation obstacles from which the prudent recoil. The right partisan is a heady man, who, because he does not see many things, sees some one thing with heat and exaggeration; and if he falls among other narrow men, or objects which have a brief importance, prefers it to the universe, and seems inspired and a godsend to those who wish to magnify the matter and carry a point. 'T is the difference between progress by railroad and by walking across the broken country. Immense speed, but only in one direction.

¶ There are two theories of life; one for the demonstration of our talent, the other for the education of the man. One is activity, the busybody, the following of that practical talent which we have, in the belief that what is so natural, easy and pleasant to us and desirable to others will surely lead us out safely; in this direction lie usefulness, comfort, society, low power of all sorts. The other is trust, religion, consent to be nothing for eternity, entranced waiting, the worship of ideas. This is solitary, grand, secular. They are in perpetual balance and strife. One is talent, the other genius. One is skill, the other character.

¶ We are continually tempted to sacrifice genius to talent, the hope and promise of insight to the lust of a freer demonstration of those gifts we have; and we buy this freedom to glitter by the loss of general health.

¶ It is the levity of this country to forgive everything to talent. If a man show cleverness, rhetorical skill, bold front in the forum or senate, people clap their hands without asking more. We have a juvenile love of smartness, of showy speech. We like faculty that can rapidly be coined into money, and society seems to be in conspiracy to utilize every gift prematurely, and pull down genius to lucrative talent. Every kind of meanness and mischief is forgiven to intellect. All is condoned if I can write a good song or novel.

¶ Wide is the gulf between genius and talent. The men we know, poets, wits, writers, deal with their thoughts as jewellers with jewels, which they sell but must not wear. Like the carpenter, who gives up the key of the fine house

he has built, and never enters it again.

¶ There is a conflict between a man's private dexterity or talent and his access to the free air and light which wisdom is; between wisdom and the habit and necessity of repeating itself which belongs to every mind. Peter is the mould into which everything is poured like warm wax, and be it astronomy or railroads or French revolution or theology or botany, it comes out Peter. But there are quick limits to our interest in the personality of people. They are as much alike as their barns and pantries, and are as soon musty and dreary. They entertain us for a time, but at the second or third encounter we have nothing more to learn.

WILL is the measure of power. To a great genius there must be a great will. If the thought is not a lamp to the will, does not proceed to an act, the wise are imbecile. He alone is strong and happy who has a will. The rest are herds. He uses; they are used. He is of the Maker; they are of the Made.

¶ The daily history of the Intellect is this alternating of expansions and concentrations. The expansions are the invitations from heaven to try a larger sweep, a higher pitch than we have yet climbed, and to leave all our past for this enlarged scope. Present power, on the other hand, requires concentration on the moment and the thing to be done.

¶ The condition of sanity is to respect the order of the intellectual world; to keep down talent in its place, to enthrone the instinct. There must be perpetual rallying and self-recovery. Each talent is ambitious and self-asserting; it works for show and for the shop, and the greater it grows the more is the mischief and the misleading, so that presently all is wrong.

¶ No wonder the children love masks and costumes, and play horse, play soldier, play school, play bear, and delight in theatricals. The children have only the instinct of the universe, in which becoming somewhat else is the perpetual game of Nature, and death the penalty of standing still. 'T is not less in thought. I cannot conceive any good in a thought which confines and stagnates. The universe exists only in transit, or we behold it shooting the gulf from the past to the future. We are passing into new heavens in fact by the movement of our solar system, and in thought by our better knowledge. Transition is the attitude of power. A fact is only a fulcrum of the spirit. It is the terminus of a past thought, but only a means now to new sallies of the imagination and new progress of wisdom. The habit of saliency, of not pausing but proceeding, is a sort of importation and domestication of the divine effort into a man. Routine, the rut, is the path of indolence, of cows, of sluggish animal life; as near gravitation as it can go. But wit sees the short way, puts together what belongs together, custom or no custom; in that is organization.

¶ Inspiration is the continuation of the divine effort that built the man. The same course continues itself in the mind which we have witnessed in Nature, namely the carrying-on and completion of the metamorphosis from grub to worm, from worm to fly. In human thought this process is often arrested for years and ages. The history of mankind is the history of arrested growth. This premature stop, I know not how, befalls most of us in early youth; as if the growth of high powers, the access to rare truths, closed at two or three years in the child, while all the pagan faculties went ripening on to sixty.

¶ So long as you are capable of advance, so long you have not abdicated the hope and future of a divine soul. That wonderful oracle will reply when

it is consulted, and there is no history or tradition, no rule of life or art or science, on which it is not a competent and the only competent judge.

¶ Man was made for conflict, not for rest. In action is his power; not in his goals but in his transitions man is great. Instantly he is dwarfed by self-indulgence. The truest state of mind rested in becomes false.

¶ The spiritual power of man is twofold, mind and heart, Intellect and morals; one respecting truth, the other the will. One is the man, the other the woman in spiritual nature. One is power, the other is love. These elements always coexist in every normal individual, but one predominates. And as each is easily exalted in our thoughts till it serves to fill the universe and become the synonym of God, the soul in which one predominates is ever watchful and jealous when such immense claims are made for one as seem injurious to the other. Ideal and practical, like ecliptic and equator, are never parallel. Each has its vices, its proper dangers, obvious enough when the opposite element is deficient.

¶ Intellect is skeptical, runs down into talent, selfish working for private ends, conceited, ostentatious and malignant. On the other side the clear-headed thinker complains of souls led hither and thither by affections which, alone, are blind guides and thriftless workmen, and in the confusion asks the polarity of intellect. But all great minds and all great hearts have mutually allowed the absolute necessity of the twain.

¶ If the first rule is to obey your genius, in the second place the good mind is known by the choice of what is positive, of what is advancing. We must embrace the affirmative. But the affirmative of affirmatives is love. *Quantus amor tantus animus.* Strength enters as the moral element enters. Lovers of men are as safe as the sun. Good will makes insight. Sensibility is the secret readiness to believe in all kinds of power, and the contempt of any experience we have not is the opposite pole. The measure of mental health is the disposition to find good everywhere, good and order, analogy, health and benefit,—the love of truth, tendency to be in the right, no fighter for victory, no cockerel.

¶ We have all of us by nature a certain divination and parturient vaticination in our minds of some higher good and perfection than either power or knowledge. Knowledge is plainly to be preferred before power, as being that which guides and directs its blind force and impetus; but Aristotle declares that the origin of reason is not reason, but something better.

¶ The height of culture, the highest behavior, consists in the identification of the Ego with the universe; so that when a man says I hope, I find, I think, he might properly say, The human race thinks or finds or hopes. And meantime he shall be able continually to keep sight of his biographical Ego,—I have a desk, I have an office, I am hungry, I had an ague,—as rhetoric or offset to his grand spiritual Ego, without impertinence, or ever confounding them.

¶ I may well say this is divine, the continuation of the divine effort. Alas! it seems not to be ours, to be quite independent of us. Often there is so little affinity between the man and his works that we think the wind must have writ them. Also its communication from one to another follows its own law and refuses our intrusion. It is in one, it belongs to all; yet how to impart it?

¶ We need all our resources to live in the world which is to be used and decorated by us. Socrates kept all his virtues as well as his faculties well in hand. He was sincerely humble, but he utilized his humanity chiefly as a better eye-glass to penetrate the vapors that baffled the vision of other men.

¶ The superiority of the man is in the simplicity of his thought, that he has no obstruction, but looks straight at the pure fact, with no color of option. Profound sincerity is the only basis of talent as of character. The virtue of the Intellect is its own, its courage is of its own kind, and at last it will be justified, though for the moment it seem hostile to what it most reveres.

¶ We wish to sum up the conflicting impressions by saying that all point at last to a unity which inspires all. Our poetry, our religion are its skirts and penumbræ. Yet the charm of life is the hints we derive from this. They overcome us like perfumes from a far-off shore of sweetness, and their meaning is that no tongue shall syllable it without leave; that only itself can name it; that by casting ourselves on it and being its voice it rushes each moment to positive commands, creating men and methods, and ties the will of a child to the love of the First Cause.

II

INSTINCT AND INSPIRATION

IN reckoning the sources of our mental power, it were fatal to omit that one which pours all the others into mould—that unknown country in which all the rivers of our knowledge have their fountains, which by its qualities and structure determines both the nature of the waters, and the direction in which they flow. We have a certain blind wisdom, a brain of the brain, a seminal brain, which has not yet put forth organs, which rests in oversight and presence, but which seems to sheathe a certain omniscience; and which, in the despair of language, is commonly called Instinct.

¶ This is that which never pretends: nothing seems less, nothing is more. Ask what the Instinct declares, and we have little to say; he is no newsmonger, no disputant, no talker. Consciousness is but a taper in the great night; but the taper at which all the illumination of human arts and sciences was kindled. And in each man's experience, from this spark torrents of light have once and again streamed and revealed the dusky landscape of his life. 'T is very certain that a man's whole possibility is contained in that habitual first look which he casts on all objects. Here alone is the field of metaphysical discovery, yes, and of every religion and civil order that has been or shall be. All that we know is flakes and grains detached from this mountain. None of the metaphysicians have prospered in describing this power, which constitutes sanity; and is the corrector of private excesses and mistakes; public in all its regards, and of a balance which is never lost, not even in the insane.

¶ All men are, in respect to this source of truth, on a certain footing of equality, equal in original science, though against appearance; and 't is incredible to them. There is a singular credulity which no experience will cure us of, that another man has seen or may see somewhat more than we, of the primary facts; as, for example, of the continuity of the individual, and, eye for eye, object for object, their experience is invariably identical in a million individuals. I know, of course, all the grounds on which any man affirms the immortality of the Soul. Fed from one spring, the water-tank is equally full in all the gardens: the difference is in the distribution by pipes and pumps (difference in the aqueduct), and fine application of it. Its property is absolute science and an implicit reliance is due to it.

¶ All true wisdom of thought and of action comes of deference to this instinct, patience with its delays.

¶ To make a practical use of this instinct in every part of life constitutes true wisdom, and we must form the habit of preferring in all cases this guidance, which is given as it is used. To indicate a few examples of our recurrence to instinct instead of to the understanding: we can only judge safely of a discipline, of a book, of a man, or other influence, by the frame of mind it induces, as whether that be large and serene, or dispiriting and degrading. Then we get a certain habit of the mind as the measure; as Haydon found Voltaire's tales left him melancholy. The eye and ear have a logic which transcends the skill of the tongue. The ear is not to be cheated. A continuous effect cannot be produced by discontinuous thought, and when the eye cannot detect the juncture of the skilful mosaic, the spirit is apprised of disunion,

simply by the failure to affect the spirit. Objection and loud denial not less prove the reality and conquests of an idea than the friends and advocates it finds. One often sees in the embittered acuteness of critics snuffing heresy from afar, their own unbelief, that they pour forth on the innocent promulgator of new doctrine their anger at that which they vainly resist in their own bosom. Again, if you go to a gallery of pictures, or other works of fine art, the eye is dazzled and embarrassed by many excellences. The marble imposes on us; the exquisite details, we cannot tell if they be good or not: but long after we have quitted the place, the objects begin to take a new order; the inferior recede or are forgotten and the truly noble forms reappear to the imagination.

¶ The Instinct begins at this low point at the surface of the earth, and works for the necessities of the human being; then ascends, step by step, to suggestions, which are, when expressed, the intellectual and moral laws.

¶ And what is Inspiration? It is this Instinct, whose normal state is passive, at last put in action. We attributed power and science and good will to the Instinct, but we found it dumb and inexorable. If it would but impart itself! To coax and woo the strong Instinct to bestir itself, and work its miracle, is the end of all wise endeavor. It is resistless, and knows the way, is the inventor of all arts, and is melodious, and at all points a god. Could we prick the sides of this slumberous giant; could we break the silence of this oldest angel, who was with God when the worlds were made! The whole art of man has been an art of excitation, to provoke, to extort speech from the drowsy genius. We ought to know the way to our nectar. We ought to know the way to insight and prophecy as surely as the plant knows its way to the light; the cow and sheep to the running brook; or the feaster to his wine. We believe (the drop of blood has latent power and organs) that the rudest mind has a Delphi and Dodona—predictions of Nature and history—in itself, though now dim and hard to read. All depends on some instigation, some impulse. Where is the yeast that will leaven this lump? Where the wine that will warm and open these silent lips? Where the fire that will light this combustible pile? That force or flame is alone to be considered; 't is indifferent on what it is fed.

¶ Here are we with all our world of facts and experience, the spontaneous impressions of Nature and men, and original oracles,—all ready to be uttered, if only we could be set aglow. How much material lies in every man! Who knows not the insufficiency of our forces, the solstice of genius? The star climbs for a time the heaven, but never reaches the zenith; it culminates low, and goes backward whence it came.

¶ The human faculty only warrants inceptions. Even those we call great men build substructures, and, like Cologne Cathedral, these are never finished. Lord Bacon begins; Behmen begins; Goethe, Fourier, Schelling, Coleridge, they all begin: we, credulous bystanders, believe, of course, that they can finish as they begun. If you press them, they fly to a new topic, and here, again, open a magnificent promise, which serves the turn of interesting us once more, and silencing reproaches, but they never complete their work. Inspiration is vital and continuous. It is also a public or universal light, and not particular. But genius is as weary of his personality as others are, and he has the royal expedient to thrust Nature between him and you, and perpetually to divert attention from himself, by the stream of thoughts, laws and images.

¶ In the healthy mind, the thought is not a barren thesis, but expands, varies, recruits itself with relations to all Nature, paints itself in wonderful symbols, appears in new men, in institutions, in social arrangements, in wood, in stone, in art, in books. The mark and sign of it is newness. The divine energy never rests or repeats itself, but casts its old garb, and reappears, another creature; the old energy in a new form, with all the vigor of the earth; the Ancient of

Days in the dew of the morning.

¶ Novelty in the means by which we arrive at the old universal ends is the test of the presence of the highest power, alike in intellectual and in moral action. How incomparable beyond all price seems to us a new poem—say Spenser —or true work of literary genius! In five hundred years we shall not have a second. We brood on the words or works of our companion, and ask in vain the sources of his information. He exhibits an exotic culture, as if he had his education in another planet. The poet is incredible, inexplicable.

¶ The poet works to an end above his will, and by means, too, which are out of his will. Every part of the poem is therefore a true surprise to the reader, like the parts of the plant, and legitimate as they. The muse may be defined, *Supervoluntary ends effected by supervoluntary means.* No practical rules for the poem, no working-plan was ever drawn up. It is miraculous at all points. The poetic state given, a little more or a good deal more or less performance seems indifferent. It is as impossible for labor to produce a sonnet of Milton, or a song of Burns, as Shakspeare's Hamlet, or the Iliad. There is much loss, as we say on the railway, in the stops, but the running time need be but little increased, to add great results. One master could so easily be conceived as writing all the books of the world. They are all alike. For it is a power to convert all Nature to his use. It is a tap-root that sucks all the juices of the earth.

¶ It is this employment of new means —of means not mechanical, but spontaneously appearing for the new need, and as good as the end—that denotes the inspired man. This is equally obvious in all the fine arts; and in action as well as in fine arts. We must try our philanthropists so. The reformer comes with many plans of melioration, and the basis on which he wishes to build his new world, a great deal of money. But what is gained? Certain young men or maidens are thus to be screened from the evil influences of trade by force of money. Perhaps that is a benefit, but those who give the money must be just so much more shrewd, and worldly, and hostile, in order to save so much money. I see not how any virtue is thus gained to society. It is a mere transference. But he will instruct and aid us who shows us how the young may be taught without degrading the old; how the daily sunshine and sap may be made to feed wheat instead of moss and Canada thistle; and really the capital discovery of modern agriculture is that it costs no more to keep a good tree than a bad one.

THE secret of power, intellectual or physical, is concentration, and all concentration involves of necessity a certain narrowness. It is a law of Nature that he who looks at one thing must turn his eyes from every other thing in the universe. The horse goes better with blinders, and the man for dedication to his task.

¶ But *how*, cries my reformer, is this to be done? *How* could I do it, who have wife and family to keep? The question is most reasonable,—yet proves that you are not the man to do the feat. The mark of the spirit is to know its way, to invent means. It has been in the universe before, of old and from everlasting, and knows its way up and down. Power is the authentic mark of spirit. . . .

¶ What a revelation of power is music! Yet, when we consider who and what the professors of that art usually are, does it not seem as if music falls accidentally and superficially on its artists? Is it otherwise with poetry? . . . Here is a famous Ode, which is the first performance of the British mind and

lies in all memories as the high-water mark in the flood of thought in this age. What does the writer know of that? Converse with him, learn his opinions and hopes. He has long ago passed out of it, and perhaps his only concern with it is some copyright of an edition in which certain pages, so and so entitled, are contained. When a young man asked old Goethe about Faust, he replied, "What can I know of this? I ought rather to ask you, who are young, and can enter much better into that feeling." Indeed, I believe it is true in the experience of all men,—for all are inspirable, and sometimes inspired,—that, for the memorable moments of life, we were in them, and not they in us." . . . How they entered into me, let them say if they can; for I have gone over all the avenues of my flesh, and cannot find by which they entered," said Saint Augustine. And the ancient Proclus seems to signify his sense of the same fact, by saying, "The parts in us are more the property of wholes, and of things above us, than they are our property."

IDEA and execution are not often intrusted to the same head. The grasp is the main thing. Most men's minds do not grasp anything. All slips through their fingers. I have heard that idiot children are known from their birth by the circumstance that their hands do not close round anything.

¶ Yes, this wonderful source of knowledge remains a mystery; and its arts and methods of working remain a mystery: it is untamable; the ship of heaven guides itself, and will not accept a wooden rudder. It must be owned that what we call Inspiration is coy and capricious; we must lose many days to gain one; and in order to win infallible verdicts from the inner mind, we must indulge and humor it in every way, and not to exactly task and harness it. Also its communication from one to another follows its own law, and refuses our intrusion. It is one, it belongs to all: yet how to impart it? This makes the perpetual problem of education. How shall I educate my children? Shall I indulge, or shall I control them? Philosophy replies, Nature is stronger than your will, and were you never so vigilant, you may rely on it, your nature and genius will certainly give your vigilance the slip though it had *delirium tremens,* and will educate the children by the inevitable infusions of its quality. You will do as you can. Why then cumber yourself about it, and make believe be better than you are? Our teaching is indeed hazardous and rare. Our only security is in our rectitude, whose influences must be salutary. That virtue which was never taught us, we cannot teach others. They must be taught by the same schoolmaster. And in spite of our imbecility and terrors, in spite of Boston and London, and universal decay of religion, etc., etc., the moral sense reappears forever with the same angelic newness that has been from of old the fountain of poetry and beauty and strength. Nature is forever over education; our famous orchardist once more: Van Mons of Belgium, after all his experiments at crossing and refining his fruit, arrived at last at the most complete trust in the native power. "My part is to sow, and sow, and resow, and in short do nothing but sow."

¶ It is not in our will. That is the quality of it, that it commands, and is not commanded. And rarely, and suddenly, and without desert, we are let into the serene upper air. Is it that we are such mountains of conceit that Heaven cannot enough mortify and snub us,—I know not; but there seems a settled determination to break our spirit. We shall not think of ourselves too highly. We cannot even see what or

where our stars of destiny are. . . . The inexorable Laws, the Ideas, the private Fate, the Instinct, the Intellect, Memory, Imagination, Fancy, Number, Inspiration, Nature, Duty;—'t is very certain that these things have been hid as under towels and blankets, most part of our days, and, at certain privileged moments, they emerge unaccountably into light. I know not why, but our thoughts have a life of their own, independent of our will. We call genius, in all our popular and proverbial language, divine; to signify its independence of our will. Intellect is universal not individual. . . . I think this pathetic,—not to have any wisdom at our own terms, nor to have any power of organizing victory. The only comfort I can lay to my own sorrow is that we have a higher than a personal interest, which, in the ruin of the personal, is secured. I see that all beauty of discourse or of manners lies in launching on the thought, and forgetting ourselves; and though the beatitude of the Intellect seems to lie out of our volition, and to be unattainable as the sky, yet we can take sight beforehand of a state of being wherein the will shall penetrate and control what it cannot now reach. The old law of science, *Imperat parendo, we command by obeying,* is forever true; and by faithful serving, we shall complete our noviciate to this subtle art. Yes, and one day, though far off, you will attain the control of these states, you will enter them at will; you will do what now the muses only sing. That is the nobility and high prize of the world.

¶ And this reminds me to add one more trait of the inspired state, namely, incessant advance,—the forward foot. For it is the curious property of truth to be uncontainable and ever enlarging. Truth indeed! We talk as if we had it, or sometimes said it, or knew anything about it,—that terrific re-agent. 'T is a gun with a recoil which will knock down the most nimble artillerists, and therefore is never fired. The ideal is as far ahead of the videttes of the van as it is of the rear. And before the good we aim at, all history is symptomatic, and only a good omen.

WIDE is the gulf between genius and talent. The men we know, poets, wits, writers, deal with their thoughts as jewellers with jewels, which they sell but must not wear. Like the carpenter, who gives up the key of the fine house he has built, and never enters it again.

¶ And the practical rules of literature ought to follow from these views, namely, that all writing is by the grace of God; that none but a writer should write; that he should write affirmatively, not polemically, or should write nothing that will not help somebody,—as I knew of a good man who held conversations, and wrote on the wall, "that every person might speak to the subject, but no allusion should be made to the opinions of other speakers;"—that we must affirm and affirm, but neither you nor I know the value of what we say; that we must be openers of doors and not a blind alley; that we must hope and strive, for despair is no muse, and vigor always liberates.

¶ The whole ethics of thought is of this kind, flowing out of reverence of the source, and is a sort of religious office. If there is inspiration let there be only that. You shall not violate its conditions, but we will by all means invite it. It is a sort of rule in Art that you shall not speak of any work of art except in its presence; then you will continue to learn something, and will make no blunder. It is not less the rule of this kingdom that you shall not speak of the mount except on the mount; that there are certain problems one would

not willingly open, except when the irresistible oracles broke silence. He needs all his health and the flower of his faculties for that. All men are inspirable. Whilst they say only the beautiful and sacred words of necessity, there is no weakness, and no repentance. But the moment they attempt to say these things by memory, charlatanism begins. I am sorry that we do not receive the higher gifts justly and greatly. The reception should be equal. The thoughts which wander through our mind, we do not absorb and make flesh of, but we report them as thoughts; we retail them as news, to our lovers and to all Athenians. At a dreadful loss we play this game; for the secret Power will not impart himself to us for tea-table talk; he frowns on moths and puppets, passes by us, and seeks a solitary and religious heart.

¶ All intellectual virtue consists in a reliance on Ideas. It must be carried with a certain magnificence. We must live by our strength, not by our weakness. It is the exhortation of Zoroaster, "Let the depth, the immortal depth of your soul lead you." It was the saying of Pythagoras, "Remember to be sober, and to be disposed to believe; for these are the nerves of wisdom."

¶ Why should we be the dupes of our senses, the victims of our own works, and always inferior to ourselves? We do not yet trust the unknown powers of thought. The whole world is nothing but an exhibition of the powers of this principle, which distributes men. Whence came all these tools, inventions, books, laws, parties, kingdoms? Out of the invisible world, through a few brains. Nineteen twentieths of their substance do trees draw from the air. Plant the pitch-pine in a sand-bank, where is no food, and it thrives, and presently makes a grove, and covers the sand with a soil by shedding its leaves. Not less are the arts and institutions of men created out of thought. The powers that make the capitalist are metaphysical, the force of method and the force of will makes trade, and builds towns. "All conquests that history tells of will be found to resolve themselves into the superior mental powers of the conquerors," and the real credentials by which man takes precedence of man, and lays his hand on those advantages which confirm and consolidate rank, are intellectual and moral. The men are all drugged with this liquor of thought, and thereby secure to their several works. It is easy to see that the races of men rise out of the ground preoccupied with a thought which rules them, divided beforehand into parties ready armed and angry to fight for they know not what. They all share, to the rankest Philistines, the same belief. The haberdashers and brokers and attorneys are idealists and only differ in the amount and clearness of their perception. Whether Whiggery, or Chartism, or Church, or a dream of Wealth, fashioned all these resolute bankers, merchants, lawyers, landlords, who administer the world of to-day, as leaves and wood are made of air, an idea fashioned them, and one related to yours. A stronger idea will subordinate them. Yours, if you see it to be nearer and truer. A man of more comprehensive view can always see with good humor the seeming opposition of a powerful talent which has less comprehension. 'T is a strong paddy, who, with his burly elbows, is making place and way for him. Trust entirely the thought. Lean upon it, it will bear up thee and thine; and society, and systems, like a scrap of down.

¶ The world is intellectual; and the man is. Every man comes into Nature impressed with his own polarity or bias, in obeying which his power, opportunity and happiness reside. . . . He is strong by his genius, gets all his knowledge only through that aperture. Society is unanimous against his project. He never hears it as he knows it. Nevertheless he is right; right against the world. All excellence is only an inflamed personality. If he is wrong, increase his determination to his aim, and he is right again. What is the use of trying to be somewhat else? He has a facility, which costs him nothing, to do

somewhat admirable to all men. He is strong by his genius, and happy also by the same. The secret of power is delight in one's work. He takes delight in working, not in having wrought. His workbench he finds everywhere, and his workbench is home, education, power and patron. Whilst he serves his genius, he works when he stands, when he sits, when he eats and when he sleeps. The dream which lately floated before the eyes of the French nation—that every man shall do that which of all things he prefers, and shall have three francs a day for doing that—is the real law of the world; and all good labor, by which society is really served, will be found to be of that kind.

¶ All we ask of any man is to be contented with his own work. An enthusiastic workman dignifies his art and arrives at results. Him we account the fortunate man whose determination to his aim is sufficiently strong to leave him no doubt. I am aware that Nature does not always pronounce early on this point. Many men are very slow in finding their vocation. It does not at once appear what they were made for. Nature has not made up her mind in regard to her young friend, and when this happens, we feel life to be some failure. Life is not quite desirable to themselves. It uniformly suggests in the conversation of men the presumption of continued life, of which the present is only one term. We must suppose life to such is a kind of hibernation, and 't is to be hoped they will be very fat and energetic in the spring. They ripen too slowly than that the determination should appear in this brief life. As with our Catawbas and Isabellas at the eastward, the season is not quite long enough for them.

INSPIRATION is the continuation of THE DIVINE EFFORT that built the MAN.

¶ This determination of Genius in each is so strong that, if it were not guarded with powerful checks, it would have made society impossible. As it is, men are best and most by themselves: and always work in society with great loss of power. They are not timed each to the other: they cannot keep step, and life requires too much compromise. Men go through the world each musing on a great fable dramatically pictured and rehearsed before them. If you speak to the man, he turns his eyes from his own scene, and, slower or faster, endeavors to comprehend what you say. When you have done speaking, he returns to his private music. Men generally attempt, early in life, to make their brothers, afterwards their wives, acquainted with what is going forward in their private theatre; but they soon desist from the attempt, in finding that they also have some farce, or, perhaps, some ear- and heart-rending tragedy forward on their secret boards, on which they are intent; and all parties acquiesce, at last, each in a private box, with the whole play performed before himself *solus*.

¶ The source of thought evolves its own rules, its own virtues, its own religion. Its whole equipment is new, and it can only fight with its own weapons. Is there only one courage, one gratitude, one benevolence? No, but as many as there are men. Every constitution has its own health and diseases. A new constitution, a new fever, say the physicians. I think the reason why men fail in their conflicts is because they wear other armor than their own. Each must have all, but by no means need he have it in your form. Each must be rich, but not only in money or lands, he may have

instead the riches of riches,—creative supplying power.

¶ Within this magical power derived from fidelity to his nature, he adds also the mechanical force of perseverance. He shall keep the law which shall keep him. . . . In persistency, he knows the strength of Nature, and the immortality of man to lie. A man must do the work with that faculty he has now. But that faculty is the accumulation of past days. That you have done long ago helps you now. No rival can rival backward. What you have learned and done, is safe and fruitful. Work and learn in evil days, in barren days, in days of depression and calamity. "There is but one only liberator in this life from the demons that invade us, and that is, Endeavor,—earnest, entire, perennial endeavor.

MAN was made for conflict, not for rest. In action is his power; not in his goals but in his transitions man is great. Instantly he is dwarfed by self-indulgence. The truest state of mind rested in becomes false.

¶ Follow this leading, nor ask too curiously whither. To follow it is thy part. And what if it lead, as men say, to an excess, to partiality, to individualism? Follow it still. His art shall suffice this artist, his flame this lover, his inspiration this poet. The artist must be sacrificed. Take it sadly home to thy heart,—the artist must pay for his learning and doing with his life. The old Herschel must choose between the night and the day, and draw on his nightcap when the sun rises, and defend his eyes for nocturnal use. Michael Angelo must paint Sistine ceilings till he can no longer read, except by holding the book over his head. Nature deals with all her children so. See the poor flies, lately so wanton, now fixed to the wall or the tree, exhausted and presently blown away. Men likewise, they put their lives into their deed. . . .

¶ There is a probity of the Intellect, which demands, if possible, virtues more costly than any Bible has consecrated. It consists in an absolute devotion to truth, founded in a faith in truth. . . . The virtue of the Intellect is its own, as its courage is of its own kind: and at last, it will be justified, though for the time it seem hostile to that which it most reveres. . . . I will speak the truth in my heart, or think the truth against what is called God. . . .

¶ One polarity is impressed on the universe and on its particles. As the whole has its law, so each individual has his genius. Obedience to its genius (to speak a little scholastically) is the particular of faith; perception that the tendency of the whole is to the benefit of the individual is the universal of faith. Do not truck for your private immortality. If immortality, in the sense in which you seek it, is best, you shall be immortal. If it is up to the dignity of that order of things you know, it is secure. The sky, the sea, the plants, the rocks, astronomy, chemistry, keep their word. Morals and the genius of humanity will also. In short, the whole moral of modern science is the transference of that trust which is felt in Nature's admired arrangements, to the sphere of freedom and of rational life. . . .

¶ These studies seem to me to derive an importance from their bearing on the universal question of modern times, the question of Religion. It seems to me, as if men stood craving a more stringent creed than any of the pale and enervating systems to which they have had recourse. The Buddhist who finds gods masked in all his friends and enemies, and reads the issue of the conflict before-

hand in the rank of the actors, is calm. The old Greek was respectable and we are not yet able to forget his dramas,—who found the genius of tragedy in the conflict between Destiny and the strong *should*, and not like the moderns, in the weak *would*. . . .

¶ Our books are full of generous biographies of Saints, who knew not that they were such; of men and of women who lived for the benefit and healing of nature. But one fact I read in them all,—that there is a religion which survives immutably all persons and fashions, and is worshipped and pronounced with emphasis again and again by some holy person;—and men, with their weak incapacity for principles, and their passion for persons, have run mad for the pronouncer, and forgot the religion. But there is surely enough for the heart and the imagination in the religion itself.

THE secret of power is delight in one's work. He takes delight in working, not in having wrought. His workbench he finds everywhere, and his workbench is home, education, power and patron. Whilst he serves his genius, he works when he stands, when he sits, when he eats and when he sleeps.

¶ The joy of knowledge, the late discovery that the veil which hid all things from him is really transparent, transparent everywhere to pure eyes, and the heart of trust which every perception fortifies,—renew life for him. He finds that events spring from the same root as persons; the universe understands itself, and all the parts play with a sure harmony.

III

MEMORY

MEMORY is a primary and fundamental faculty, without which none other can work; the cement, the bitumen, the matrix in which the other faculties are embedded; or it is the thread on which the beads of man are strung, making the personal identity which is necessary to moral action. Without it all life and thought were an unrelated succession. As gravity holds matter from flying off into space, so memory gives stability to knowledge; it is the cohesion which keeps things from falling into a lump, or flowing in waves.

¶ We like longevity, we like signs of riches and extent of nature in an individual. And most of all we like a great memory. The lowest life remembers. The sparrow, the ant, the worm, have the same memory as we. If you bar their path, or offer them somewhat disagreeable to their senses, they make one or two trials, and then once for all avoid it.

¶ Every machine must be perfect of its sort. It is essential to a locomotive that it can reverse its movement, and run backward and forward with equal celerity. The builder of the mind found it not less needful that it should have retroaction, and command its past act and deed. Perception, though it were immense and could pierce through the universe, was not sufficient.

¶ Memory performs the impossible for man by the strength of his divine arms; holds together past and present, beholding both, existing in both, abides in the flowing, and gives continuity and dignity to human life. It holds us to our family, to our friends. Hereby a home is possible; hereby only a new fact has value.

¶ Opportunities of investment are useful only to those who have capital. Any piece of knowledge I acquire today, a fact that falls under my eyes, a book I read, a piece of news I hear. has a value at this moment exactly proportioned to my skill to deal with it. To-

morrow, when I know more, I recall that piece of knowledge and use it better.

¶ The Past has a new value every moment to the active mind, through the incessant purification and better method of its memory. Once it joined its facts by color and form and sensuous relations. Some fact that had a childish significance to your childhood and was a type in the nursery, when riper intelligence recalls it means more and serves you better as an illustration; and perhaps in your age has new meaning. What was an isolated, unrelated belief or conjecture, our later experience instructs us how to place in just connection with other views which confirm and expand it. The old whim or perception was an augury of a broader insight, at which we arrive later with securer conviction. This is the companion, this the tutor, the poet, the library, with which you travel. It does not lie, cannot be corrupted, reports to you not what you wish, but what really befell. You say, "I can never think of some act of neglect, of selfishness, or of passion without pain." Well, that is as it should be. That is the police of the Universe: the angels are set to punish you, so long as you are capable of such crime. But in the history of character the day comes when you are incapable of such crime. Then you suffer no more, you look on it as heaven looks on it, with wonder at the deed, and with applause at the pain it has cost you.

¶ Memory is not a pocket, but a living instructor, with a prophetic sense of the values which he guards; a guardian angel set there within you to record your life, and by recording to animate you to uplift it. It is a scripture written day by day from the birth of the man; all its records full of meanings which open as he lives on, explaining each other, explaining the world to him and expanding their sense as he advances, until it shall become the whole law of Nature and life.

¶ As every creature is furnished with teeth to seize and eat, and with stomach to digest its food, so the memory is furnished with a perfect apparatus. There is no book like the memory, none with such a good index, and that of every kind, alphabetic, systematic, arranged by names or persons, by colors, tastes, smells, shapes, likeness, unlikeness, by all sorts of mysterious hooks and eyes to catch and hold, and contrivances for giving a hint.

¶ The memory collects and re-collects. We figure it as if the mind were a kind of looking-glass, which being carried through the street of time receives on its clear plate every image that passes; only with this difference, that our plate is iodized so that every image sinks into it, and is held there. But in addition to this property it has one more, this, namely, that of all the million images that are imprinted, the very one we want reappears in the centre of the plate in the moment when we want it.

¶ We can tell much about it, but you must not ask us what it is. On seeing a face I am aware that I have seen it before, or that I have not seen it before. On hearing a fact told I am aware that I knew it already. You say the first words of the old song, and I finish the line and stanza. But where I have them, or what becomes of them when I am not thinking of them for months and years, that they should lie so still, as if they did not exist, and yet so nigh that they come on the instant when they are called for, never any man was so sharp-sighted, or could turn himself inside out quick enough to find.

¶ 'T is because of the believed incompatibility of the affirmative and advancing attitude of the mind with tenacious acts of recollection that people are often reproached with living in their memory. Late in life we live by memory, and in our solstices or periods of stagnation; as the starved camel in the desert lives on his humps. Memory was called by the schoolmen *vespertina cognitio*, evening knowledge, in distinction from the command of the future which we have by the knowledge of causes, and which they called *matutina cognitio*, or morning knowledge.

¶ Am I asked whether the thoughts

clothe themselves in words? I answer, Yes, always; but they are apt to be instantly forgotten. Never was truer fable than that of the Sibyl's writing on leaves which the wind scatters. The difference between men is that in one the memory with inconceivable swiftness flies after and recollects the flying leaves, —flies on wing as fast as that mysterious whirlwind, and the envious Fate is baffled.

¶ This command of old facts, the clear beholding at will of what is best in our experience, is our splendid privilege. "He who calls what is vanished back again into being enjoys a bliss like that of creating," says Niebuhr. The memory plays a great part in settling the intellectual rank of men. We estimate a man by how much he remembers. A seneschal of Parnassus is Mnemosyne. This power will alone make a man remarkable; and it is found in all good wits. Therefore the poets represented the Muses as the daughters of Memory, for the power exists in some marked and eminent degree in men of an ideal determination. Quintilian reckoned it the measure of genius. *Tantum ingenii quantum memoriæ.*

¶ We are told that Boileau having recited to Daguesseau one day an epistle or satire he had just been composing, Daguesseau tranquilly told him he knew it already, and in proof set himself to recite it from end to end. Boileau, astonished, was much distressed until he perceived that it was only a feat of memory.

¶ The mind disposes all its experience after its affection and to its ruling end; one man by puns and one by cause and effect, one to heroic benefit and one to wrath and animal desire. This is the high difference, the quality of the association by which a man remembers. In the minds of most men memory is nothing but a farm-book or a pocket-diary. On such a day I paid my note; on the next day the cow calved; on the next I cut my finger; on the next the banks suspended payment. But another man's memory is the history of science and art and civility and thought; and still another deals with laws and perceptions that are the theory of the world.

WE do not yet trust the unknown powers of thought. Whence came all these tools, inventions, books, laws, parties, kingdoms? Out of the invisible world, through a few brains. The arts and institutions of men are created out of thought. The powers that make the capitalist are metaphysical, the force of method and force of will makes trade, and builds towns.

¶ This thread or order of remembering, this classification, distributes men, one remembering by shop-rule or interest; one by passion; one by trifling external marks, as dress or money. And one rarely takes an interest in how the facts really stand, in the order of cause and effect, without self-reference. This is an intellectual man. Nature interests him; a plant, a fish, time, space, mind, being, in their own method and law. Napoleon is such, and that saves him.

¶ But this mysterious power that binds our life together has its own vagaries and interruptions. It sometimes occurs that Memory has a personality of its own, and volunteers or refuses its informations at its will, not at mine. One sometimes asks himself, Is it possible that it is only a visitor, not a resident? Is it some old aunt who goes in and out of the house, and occasionally recites anecdotes of old times and persons which I recognize as having heard before, and she being gone again I search in vain for any trace of the anecdotes?

¶ We can help ourselves to the *modus* of mental processes only by coarse material experiences. A knife with a good spring, a forceps whose lips accurately meet and match, a steel-trap, a loom, a watch, the teeth or jaws of which fit

and play perfectly, as compared with the same tools when badly put together, describe to us the difference between a person of quick and strong perception, like Franklin or Swift or Webster or Richard Owen, and a heavy man who witnesses the same facts or shares experiences like theirs. 'T is like the impression made by the same stamp in sand or in wax. The way in which Burke or Sheridan or Webster or any orator surprises us is by his always having a sharp tool that fits the present use. He has an old story, an odd circumstance, that illustrates the point he is now proving, and is better than an argument. The more he is heated, the wider he sees; he seems to remember all he ever knew; thus certifying us that he is in the habit of seeing better than other people; that what his mind grasps it does not let go. 'T is the bull-dog bite; you must cut off the head to loosen the teeth.

WITHOUT memory all life and thought were an unrelated succession. As gravity holds matter from flying off into space, so memory gives stability to knowledge; it is the cohesion which keeps things from falling into a lump, or flowing in waves.

¶ We hate this fatal shortness of Memory, these docked men whom we behold. We gathered up what a rolling snow-ball as we came along,—much of it professedly for the future, as capital stock of knowledge. Where is it now? Look behind you. I cannot see that your train is any longer than it was in childhood. The facts of the last two or three days or weeks are all you have with you,—the reading of the last month's books. Your conversation, action, your face and manners report of no more, of no greater wealth of mind. Alas! you have lost something for everything you have gained, and cannot grow. Only so much iron will the loadstone draw; it gains new particles all the way as you move it, but one falls off for every one that adheres.

¶ As there is strength in the wild horse which is never regained when he is once broken by training, and as there is a sound sleep of children and of savages, profound as the hibernation of bears, which never visits the eyes of civil gentlemen and ladies, so there is a wild memory in children and youth which makes what is early learned impossible to forget; and perhaps in the beginning of the world it had most vigor. Plato deplores writing as a barbarous invention which would weaken the memory by disuse. The Rhapsodists in Athens it seems could recite at once any passage of Homer that was desired.

¶ If writing weakens the memory, we may say as much and more of printing. What is the newspaper but a sponge or invention for oblivion? the rule being that for every fact added to the memory, one is crowded out, and that only what the affection animates can be remembered.

¶ The mind has a better secret in generalization than merely adding units to its list of facts. The reason of the short memory is shallow thought. As deep as the thought, so great is the attraction. An act of the understanding will marshal and concatenate a few facts; a principle of the reason will thrill and magnetize and redistribute the whole world.

¶ But defect of memory is not always want of genius. By no means. It is sometimes owing to excellence of genius. Thus men of great presence of mind who are always equal to the occasion do not need to rely on what they have stored for use, but can think in this moment as well and deeply as in any past moment, and if they cannot remember the rule they can make one. Indeed it is remarked that inventive men have bad memories. Sir Isaac Newton

was embarrassed when the conversation turned on his discoveries and results; he could not recall them; but if he was asked why things were so or so, he could find the reason on the spot.

¶ A man would think twice about learning a new science or reading a new paragraph, if he believed the magnetism was only a constant amount, and that he lost a word or a thought for every word he gained. But the experience is not quite so bad. In reading a foreign language, every new word mastered is a lamp lighting up related words and so assisting the memory. Apprehension of the whole sentence aids to fix the precise meaning of a particular word, and what familiarity has been acquired with the genius of the language, and the writer, helps in fixing the exact meaning of the sentence. So is it with every fact in a new science: they are mutually explaining, and each one adds transparency to the whole mass.

INVENTIVE men have bad memories. Men of great presence of mind who are always equal to the occasion do not need to rely on what they have stored for use, but can think in this moment as well and deeply as in any past moment, and if they cannot remember the rule they can make one.

¶ The damages of forgetting are more than compensated by the large values which new thoughts and knowledge give to what we already know. If new impressions sometimes efface old ones, yet we steadily gain insight; and because all Nature has one law and meaning,—part corresponding to part,—all we have known aids us continually to the knowledge of the rest of Nature. Thus, all the facts in this chest of memory are property at interest. And who shall set a boundary to this mounting value? Shall we not on higher stages of being remember and understand our early history better?

¶ They say in Architecture, "An arch never sleeps;" I say, the Past will not sleep, it works still. With every new fact a ray of light shoots up from the long buried years. Who can judge the new book? He who has read many books. Who, the new assertion? He who has heard many the like. Who, the new man? He that has seen men. The experienced and cultivated man is lodged in a hall hung with pictures which every new day retouches, and to which every step in the march of the soul adds a more sublime perspective.

¶ We learn early that there is great disparity of value between our experiences; some thoughts perish in the using. Some days are bright with thought and sentiment, and we live a year in a day. Yet these best days are not always those which memory can retain. This water once spilled cannot be gathered. There are more inventions in the thoughts of one happy day than ages could execute, and I suppose I speak the sense of most thoughtful men when I say, I would rather have a perfect recollection of all I have thought and felt in a day or a week of high activity than read all the books that have been published in a century.

¶ The memory is one of the compensations which Nature grants to those who have used their days well; when age and calamity have bereaved them of their limbs or organs, then they retreat on mental faculty and concentrate on that. The poet, the philosopher, lamed, old, blind, sick, yet disputing the ground inch by inch against fortune, finds a strength against the wrecks and decays sometimes more invulnerable than the heyday of youth and talent.

¶ I value the praise of Memory. And how does memory praise? By holding fast the best. A thought takes its true rank in the memory by surviving other thoughts that were once preferred. Plato

remembered Anaxagoras by one of his sayings. If we recall our own favorites, we shall usually find that it is for one crowning act or thought that we hold them dear.

¶ Have you not found memory an apotheosis or deification? The poor short lone fact dies at the birth. Memory catches it up into her heaven, and bathes it in immortal waters. Then a thousand times over it lives and acts again, each time transfigured, ennobled. In solitude, in darkness, we tread over again the sunny walks of youth; confined now in populous streets you behold again the green fields, the shadows of the gray birches; by the solitary river hear again the joyful voices of early companions, and vibrate anew to the tenderness and dainty music of the poetry your boyhood fed upon. At this hour the stream is still flowing, though you hear it not; the plants are still drinking their accustomed life and repaying it with their beautiful forms. But you need not wander thither. It flows for you, and they grow for you, in the returning images of former summers. In low or bad company you fold yourself in your cloak, withdraw yourself entirely from all the doleful circumstance, recall and surround yourself with the best associates and the fairest hours of your life:—

"Passing sweet are the domains of tender memory."

You may perish out of your senses, but not out of your memory or imagination.

¶ The memory has a fine art of sifting out the pain and keeping all the joy. The spring days when the bluebird arrives have usually only few hours of fine temperature, are sour and unlovely; but when late in autumn we hear rarely a bluebird's notes they are sweet by reminding us of the spring. Well, it is so with other tricks of memory. Of the most romantic fact the memory is more romantic; and this power of sinking the pain of any experience and of recalling the saddest with tranquillity, and even with a wise pleasure, is familiar. The memory is as the affection. Sampson Reed says, "The true way to store the memory is to develop the affections." A *souvenir* is a token of love. *Remember me* means, Do not cease to love me. We remember those things which we love and those things which we hate. The memory of all men is robust on the subject of a debt due to them, or of an insult inflicted on them. "They can remember," as Johnson said, "who kicked them last."

I THINK that philosophy is still rude and elementary. It will one day be taught by poets. The poet is in the natural attitude; he is believing; the philosopher, after some struggle, having only reasons for believing.

¶ Every artist is alive on the subject of his art. The Persians say, "A real singer will never forget the song he has once learned." Michael Angelo, after having once seen a work of any other artist, would remember it so perfectly that if it pleased him to make use of any portion thereof, he could do so, but in such a manner that none could perceive it.

¶ We remember what we understand, and we understand best what we like; for this doubles our power of attention, and makes it our own. Captain John Brown, of Ossawatomie, said he had in Ohio three thousand sheep on his farm, and could tell a strange sheep in his flock as soon as he saw its face. One of my neighbors, a grazier, told me that he should know again every cow, ox, or steer that he ever saw. Abel Lawton knew every horse that

went up and down through Concord to the towns in the county. And in higher examples each man's memory is in the line of his action.

¶ Nature trains us on to see illusions and prodigies with no more wonder than our toast and omelet at breakfast. Talk of memory and cite me these fine examples of Grotius and Daguesseau, and I think how awful is that power and what privilege and tyranny it must confer. Then I come to a bright schoolgirl who remembers all she hears, carries thousands of nursery rhymes and all the poetry in all the readers, hymn-books, and pictorial ballads in her mind; and 't is a mere drug. She carries it so carelessly, it seems like the profusion of hair on the shock heads of all the village boys and village dogs; it grows like grass. 'T is a bushel-basket memory of all unchosen knowledge, heaped together in a huge hamper, without method, yet securely held, and ready to come at call; so that an old scholar, who knows what to do with a memory, is full of wonder and pity that this magical force should be squandered on such frippery.

THERE are more inventions in the thoughts of one happy day than ages could execute. I would rather have a perfect recollection of all I have thought and felt in a day or a week of high activity than read all the books that have been published in a century.

¶ He is a skilful doctor who can give me a recipe for the cure of a bad memory. And yet we have some hints from experience on this subject. And first, *health*. It is found that we remember best when the head is clear, when we are thoroughly awake. When the body is in a quiescent state in the absence of the passions, in the moderation of food, it yields itself a willing medium to the intellect. For the true river Lethe is the body of man, with its belly and uproar of appetite and mountains of indigestion and bad humors and quality of darkness. And for this reason, and observing some mysterious continuity of mental operation during sleep or when our will is suspended, 't is an old rule of scholars, that which Fuller records, " 'T is best knocking in the nail overnight and clinching it next morning." Only I should give extension to this rule and say, Yes, drive the nail this week and clinch it the next, and drive it this year and clinch it the next.

¶ But Fate also is an artist. We forget also according to beautiful laws. Thoreau said, "Of what significance are the things you can forget. A little thought is sexton to all the world."

¶ We must be severe with ourselves, and what we wish to keep, we must once thoroughly possess. Then the thing seen will no longer be what it was, a mere sensuous object before the eye or ear, but a reminder of its law, a possession for the intellect. Then we relieve ourselves of all task in the matter, we put the *onus* of being remembered on the object, instead of on our will. We shall do as we do with all our studies, prize the fact or the name of the person by that predominance it takes in our mind after near acquaintance. I have several times forgotten the name of Flamsteed, never that of Newton; and can drop easily many poets out of the Elizabethan chronology, but not Shakspeare.

¶ We forget rapidly what should be forgotten. The *universal* sense of fables and anecdotes is marked by our tendency to forget name and date and geography. "How in the right are children," said Margaret Fuller, "to forget name and date and place."

¶ You cannot overstate our debt to the past, but has the present no claim? This past memory is the baggage, but

where is the troop? The divine gift is not the old but the new. The divine is the instant life that receives and uses, the life than can well bury the old in the omnipotency with which it makes all things new.

¶ The acceleration of mental process is equivalent to the lengthening of life. If a great many thoughts pass through your mind, you will believe a long time has elapsed, many hours or days. In dreams a rush of many thoughts, or seeming experiences, of spending hours and going through a great variety of actions and companies, and when we start up and look at the watch, instead of a long night we are surprised to find it was a short nap. The opium-eater says, "I sometimes seemed to have lived seventy or a hundred years in one night." You know what is told of the experiences of some persons who have been recovered from drowning. They relate that their whole life's history seemed to pass before them in review. They remembered in a moment all that they ever did.

¶ If we occupy ourselves long on this wonderful faculty, and see the natural helps of it in the mind, and the way in which new knowledge calls upon old knowledge — new giving undreamed-of value to old; every relation and suggestion, so that what one had painfully held by strained attention and recapitulation now falls into place and is clamped and locked by inevitable connection as a planet in its orbit (every other orb, or the law or system of which it is a part, being a perpetual reminder),—we cannot fail to draw thence a sublime hint that thus there must be an endless increase in the power of memory only through its use; that there must be a proportion between the power of memory and the amount of knowables; and since the Universe opens to us, the reach of the memory must be as large.

¶ With every broader generalization which the mind makes, with every deeper insight, its retrospect is also wider. With every new insight into the duty or fact of to-day we come into new possession of the past.

¶ When we live by principles instead of traditions, by obedience to the law of the mind instead of by passion, the Great Mind will enter into us, not as now in fragments and detached thoughts, but the light of to-day will shine backward and forward.

¶ Memory is a presumption of a possession of the future. Now we are halves, we see the past but not the future, but in that day will the hemisphere complete itself and foresight be as perfect as aftersight.

THE CELEBRATION OF INTELLECT

I CANNOT consent to wander from the duties of this day into the fracas of politics. The brute noise of cannon has, I know, a most poetic echo in these days when it is an instrument of freedom and the primal sentiments of humanity. Yet it is but representative and a far-off means and servant: but here in the college we are in the presence of the constituency and the principle itself. Here is, or should be, the majesty of reason and the creative cause; and it were a compounding of all gradation and reverence to suffer the flash of swords and the boyish strife of passion and the feebleness of military strength to intrude on this sanctity and omnipotence of Intellectual Law. Against the heroism of soldiers I set the heroism of scholars, which consists in ignoring the other. You shall not put up in your Academy the statue of Cæsar or Pompey, of Nelson or Wellington, of Washington or Napoleon, of Garibaldi, but of Archimedes, of Milton, of Newton. Archimedes disdained to apply himself to the useful arts, only to the liberal or the causal arts. Hiero the king reproached him with his barren studies. Like Thales, he was willing to show him that he was quite able in rude matters, if he could condescend to them, and he conducted the defence of Syracuse against the Romans. Then he returned to his geometry; and when the Roman soldier, at the sack of Syracuse, broke into his study, the philosopher could not rise from his chair and his diagram, and took his death without resistance. Michael Angelo gave himself to art, despising all meaner pursuits. When the war came to his own city, he lent his genius, and defended Florence as long as he was obeyed. Milton congratulates the Parliament that, whilst London is besieged and blocked, the Thames infested, inroads and excursions round, and battle oft rumored to be marching up to her walls and suburb trenches, —yet then are the people, or the greater part, more than at other times wholly taken up with the study of highest and most important matters to be reformed, —they reasoning, reading, inventing, discoursing, even to a rarity and admiration, things not before discoursed or written, and the fact argues a just confidence in the grandeur and self-subsistency of the cause of religious liberty which made all material war an impertinence.

AGAINST the heroism of soldiers I set the heroism of scholars. You shall not put up in your Academy the statue of Cæsar or Pompey, of Nelson or Wellington, of Washington or Napoleon, of Garibaldi, but of Archimedes, of Milton, of Newton.

¶ For either science and literature is a hypocrisy, or it is not. If it be, then resign your charter to the Legislature, turn your college into barracks and warehouses, and divert the funds of your founders into the stock of a ropewalk or a candle-factory, a tan-yard or some other undoubted conveniency for the surrounding population. But if the intellectual interest be, as I hold, no hypocrisy, but the only reality,—then it behooves us to enthrone it, obey it; and give it possession of us and ours; to give, among other possessions, the college into its hand casting down every idol, every pretender, every hoary lie, every dignified blunder that has crept into its administration.

¶ At this season, the colleges keep their

anniversaries, and in this country where education is a primary interest, every family has a representative in their halls, a son, a brother, or one of our own kindred is there for his training. But even if we had no son or friend therein, yet the college is part of the community, and it is there for us, is training our teachers, civilizers and inspirers. It is essentially the most radiating and public of agencies, like, but better than, the light-house, or the alarm-bell, or the sentinel who fires a signal-cannon, or the telegraph which speeds the local news over the land. Besides, it deals with a force which it cannot monopolize or confine; cannot give to those who come to it and refuse to those outside. I have no doubt of the force, and for me the only question is, whether the force is inside.

¶ This power which it deals is dear to all. If the colleges were better, if they had any monopoly of it, nay, if they really had it, had the power of imparting valuable thought, creative principles, truths which become powers, thoughts which become talents,—if they could cause that a mind not profound should become profound,—we should all rush to their gates: instead of contriving inducements to draw students, you would need to set police at the gates to keep order in the in-rushing multitude.

¶ These are giddy times, and, you say, the college will be deserted. No, never was it so much needed. But I say, those were the giddy times which went before these, and the new times are the times of arraignment, times of trial and times of Judgment. 'T is because the college was false to its trust, because the scholars did not learn and teach, because they were traders and left their altars and libraries and worship of truth and played the sycophant to presidents and generals and members of Congress, and gave degrees and literary and social honors to those whom they ought to have rebuked and exposed, incurring the contempt of those whom they aught to have put in fear; then the college is suicidal; ceases to be a school; power oozes out of it just as fast as truth does; and instead of overawing the strong, and upholding the good, it is a hospital for decayed tutors.

¶ This Integrity over all partial knowledge and skill, homage to truth—how rare! Few men wish to know how the thing really stands, what is the law of it without reference to persons. Other men are victims of their means—sanity consists in not being subdued by your means.

¶ Two men cannot converse together on any topic without presently finding where each stands in moral judgment; and each learns whether the other's view commands, or is commanded by, his own. I presently know whether my companion has more candor or less, more hope for men or less, whether his sense of duty is more or less severe and his generosity larger than mine; whether he stands for ideal justice, or for a timorous expediency.

¶ Society is always idolatrous and exaggerates the merits of those who work to vulgar ends. But genius may be known by its probity. Never was pure valor—and almost I might say, never pure ability—shown in a bad cause. For ambition makes insane.

¶ Society is always taken by surprise at any new example of common sense and of simple justice, as at a wonderful discovery. Thus, at Mr. Rarey's mode of taming a horse by kindness, or Garibaldi's emancipation of Italy for Italy's sake; at the introduction of gentleness into insane asylums, and of cleanliness and comfort into penitentiaries. A farmer wished to buy an ox. The seller told him how well he had treated the animal. "But," said my farmer, "I asked the ox, and the ox showed me by marks that could not lie that he had been abused." We affect to slight England and Englishmen. But I note that we had a vast self-esteem on the subject of Bunker Hill, Yorktown and New Orleans. We should not think it much to beat Indians or Mexicans,—but to beat English! The English newspapers and some writers of reputation disparage America. Meantime I note that the Brit-

ish people are emigrating hither by thousands, which is a very sincere, and apt to be a very seriously considered expression of opinion. The emigration into America of British, as well as of Continental people, is the eulogy of America by the most competent and sincere arbiters. The hater of property and of government takes care to have his warranty-deed recorded; and the book written against fame and learning has the author's name on the title-page. . . .

¶ Gentlemen, I too am an American, and value practical talent. I love results and hate abortions. I delight in people who can do things. I value talent,—perhaps no man more. I value dearly the poet who knows his art so well that, when his voice vibrates, it fills the hearer with sympathetic song, just as a powerful note of an organ sets all tuned strings in its neighborhood in accordant vibration,—the novelist with his romance, the architect with his palace, the composer with his score. I wish you to be eloquent, to grasp the bolt and to hurl it home to the mark. I wish to see that Mirabeau who knows how to seize the heart-strings of the people and drive their hands and feet in the way he wishes them to go, to fill them with himself, to enchant men so that their will and purpose is in abeyance and they serve him with a million hands just as implicitly as his own members obey him. But I value it more when it is legitimate, when the talent is in true order, subject to genius, subject to the total and native sentiment of the man, and therefore in harmony with the public sentiment of mankind. Such is the patriotism of Demosthenes, of Patrick Henry and of what was best in Cicero and Burke; not an ingenious special pleading, not the making of a plausible case, but strong by the strength of the facts themselves. Then the orator is still one of the audience, persuaded by the same reasons which persuade them; not a ventriloquist, not a juggler, not a wire-puller paid to manage the lobby and caucus.

¶ In Demosthenes is this realism of genius. He wins his cause honestly. His doctrine is self-reliance. "If it please you to note it, my counsels to you are not such whereby I should grow great among you, and you become little among the Grecians; but they be of that nature as is sometimes not good for me to give, but are always good for you to follow."

IF the colleges had the power of imparting valuable thought, creative principles, truths which become powers, thoughts which become talents, —we should all rush to their gates: instead of contriving inducements to draw students, you would need to set police at the gates to keep order in the in-rushing multitude.

¶ You, gentlemen, are selected out of the great multitude of your mates, out of those who begun life with you, set apart through some strong persuasion of your own, or of your friends, that you were capable of the high privilege of thought. Need enough there is of such a band of priests of intellect and knowledge; and great is the office, and well deserving and well paying the last sacrifices and the highest ability. But I wish this were a needless task, to urge upon you scholars the claims of thought and learning. The order of the world educates with care the senses and the understanding.

¶ Men are as they think. A certain quantity of power belongs to a certain quantity of truth. And the man who knows any truth not yet discerned by other men is master of all other men, so far as that truth and its wide relations are concerned. Do you suppose that the thunderbolt falls short? Do you imagine that a lie will nourish and work like a truth? . . . The whole battle is fought in a few heads. A little finer

order, a larger angle of vision, commands centuries of facts and millions of thoughtless people. It reverses all rank; "he who discriminates is the father of his father." . . .

¶ And yet the world is not saved. With this divine oracle, we somehow do not get instructed. Here are still perverse millions full of passion, crime and blood. Here are bad governors and bad subjects. Nay, in the class called intellectual the men are no better than the uninstructed. They use their wit and learning in the service of the Devil. There are bad books and false teachers and corrupt judges; and in the institutions of education a want of faith in their own cause. Nay, it happens often that the well-bred and refined, the inhabitants of cities, dwelling amidst colleges, churches, and scientific museums, lectures, poets, libraries, newspapers, and other aids supposed intellectual are more vicious and malignant than the rude country people, and need to have their corrupt voting and violence corrected by the cleaner and wiser suffrages of poor farmers. The poet does not believe in his poetry. Men are ashamed of their intellect. . . .

EITHER science and literature is a hypocrisy, or it is not. If the intellectual interest be, as I hold, no hypocrisy, but the only reality, —then it behooves us to enthrone it, obey it; and give it possession of us and ours.

¶ Instinct is the name for the potential wit, that feeling which each has that what is done by any man or agent is done by the same wit as his. He looks at all men as his representatives, and is glad to see that his wit can work at that problem as it ought to be done, and better than he could do it; whether it be to build, engineer, carve, paint, sing, heal, or compute, or play chess, or ride, or swim. We feel as if one man wrote all the books, painted, built, in dark ages, and we are sure we can do more than ever was done. It was the same mind that built the world.

¶ The Understanding is the name we give to the low, limitary power working to short ends, to daily life in house and street. This is the power which the world of men adopt and educate. He is the calculator, he is the merchant, the politician, the worker in the useful; he works by shifts, by compromise, by statute, by bribes. All his activities are to short, personal ends, and he is apt to be a talker, a boaster, a busy-body.

¶ Will you let me say to you what I think is the organic law of learning? It is to observe the order, to keep down the talent, to enthrone the Instinct. There must be the perpetual rallying and self-recovery; each talent links itself so fast with self-love and with petty advantage that it loses sight of its obedience, which is beautiful, and sets up for itself, and makes confusion. Falsehood begins as soon as it disobeys, it works for show, and for the shop, and the greater it grows, the more is the mischief and misleading, so that presently all is wrong, talent is mistaken for genius, dogma or system for truth. . . .

¶ Now the idea of a college is an assembly of such men, obedient each to this pure light, and drawing from it illumination to that science or art to which his constitution and affections draw him. And the very highest advantage which a young man of good mind can meet is to find such a teacher. No books, no aids, laboratory, apparatus, prizes, can compare with this. Here is sympathy; here is an order that corresponds to that in his own mind. and in all sound minds, and the hope and impulse imparted. And education is what it should be, a delightful unfolding of the faculties in right order.

¶ I could heartily wish it were otherwise, but there is a certain shyness of genius, of free thought, of a master of art in colleges, which is as old as the rejection of Molière by the French Academy, of Bentley by the pedants of his time, and only the other day, of Arago; in Oxford, the recent rejection of Max Müller. . . . If the truth must be told, thought is as rare in colleges as in cities. The necessity of a mechanical system is not to be denied. Young men must be classed and employed, not according to the secret needs of each mind but by some available plan that will give weekly and annual results; and a little violence must be done to private genius to accomplish this. Then genius is always its own law, and must be a little impatient and rebellious to this rule, so that, of necessity, a certain hostility and jealousy of genius grows up in the masters of routine, and unless, by rare good fortune, the professor has a generous sympathy with genius and takes care to interpose a certain relief and cherishing and reverence for the wild poet and dawning philosopher he has detected in his classes, that will happen which has happened so often, that the best scholar, he for whom colleges exist, finds himself a stranger and an orphan therein. 'T is precisely analogous to what befalls in religious societies. In the romance Spiridion a few years ago, we had what it seems was a piece of accurate autobiography, the story of a young saint who comes into a convent for her education, and not falling into the system and the little parties in the convent, but inspired with an enthusiasm which finds nothing there to feed it, it turns out in a few days that every hand is against this young votary. Piety in a convent accuses every one, from the novice to the abbess. What right have you to be better than your neighbor? Piety comes to be regarded as a spy and a rebel. . . . And how often we have had repeated the trials of the young man who made no figure at college because his own methods were new and extraordinary, and who only prospered at last because he forsook theirs and took his own.

TWO men cannot converse together on any topic without presently finding where each stands in moral judgment. I presently know whether my companion stands for ideal justice, or for a timorous expediency.

¶ It is true that the University and the Church, which should be counterbalancing institutions to our great material institutions of trade and of territorial power, do not express the sentiment of the popular politics and the popular optimism, whatever it be. Harvard College has no voice in Harvard College, but State Street votes it down on every ballot. Everything will be permitted there which goes to adorn Boston Whiggism,—is it geology, astronomy, poetry, antiquities, art, rhetoric. But that which it exists for, to be a fountain of novelties out of heaven, a Delphos uttering warning and ravishing oracles to lift and lead mankind,—*that* it shall not be permitted to do or to think of. On the contrary, every generosity of thought is suspect and gets a bad name. And all the youth come out decrepit citizens; not a prophet, not a poet, not a *daimon*, but is gagged and stifled or driven away. All that is sought in the instruction is drill; tutors, not inspirers.

¶ I conceive that a college should have no mean ambition, but should aim at a reverent discipline and invitation of the soul, that here, if nowhere else in the world, genius should find its home; here Imagination should be greeted with the problems in which it delights; the

noblest tasks to the Muse proposed and the most cordial and honoring rewards; here the highest duties be urged, and enthusiasm for liberty and wisdom should breed enthusiasm and form heroes for the state. The College should hold the profound thought, and the Church the great heart to which the nation should turn, and these two should be counterbalancing to the bad politics and selfish trade. But there is but one institution, and not three. The Church and the College now take their tone from the City, and do not dictate their own. You all well know the downward tendency in literature, the facility with which men renounce their youthful aims and say, the labor is too severe, the prize too high for me; and they accept the employments of the market. . . .

GENIUS may be known by its probity. Never was pure valor—and almost I might say, never pure ability—shown in a bad cause.

¶ Ah, gentlemen, it 's only a dream of mine, and perhaps never will be true,—but I thought a college was a place not to train talents, not to train attorneys, and those who say what they please, but to adorn Genius, which only speaks truth, and after the way which truth uses, namely, Beauty; a college was to teach you geometry, or the lovely laws of space and figure; chemistry, botany, zoölogy, the streaming of thought into form, and the precipitation of atoms which Nature is.

¶ This, then, is the theory of Education, the happy meeting of the young soul, filled with the desire, with the living teacher who has already made the passage from the centre forth, step by step, along the intellectual roads to the theory and practice of special science. Now if there be genius in the scholar, that is, a delicate sensibility to the laws of the world, and the power to express them again in some new form, he is made to find his own way. He will greet joyfully the wise teacher, but colleges and teachers are no wise essential to him; he will find teachers everywhere.

¶ I would have you rely on Nature ever,—wise, omnific, thousand-handed Nature, equal to each emergency, which can do very well without colleges, and, if the Latin, Greek, Algebra or Art were in the parents, it will be in the children, without being pasted on.

¶ If your college and your literature are not felt, it is because the truth is not in them. When you say the times, the persons are prosaic, where is the feudal, or the Saracenic, or Egyptian architecture? where the romantic manners? where the Romish or the Calvinistic religion, which made a kind of poetry in the air for Milton, or Byron, or Belzoni? but to us it is barren,—you expose your atheism. Is a railroad, or a shoe-factory, or an insurance office, bank or bakery outside of the system and connection of things, or further from God than a sheep-pasture or a clam-bank? Is chemistry suspended? Do not the electricities and the imponderable influences play with all their magic undulations? Do not gravity and polarity keep their unerring watch on a needle and thread, on a cobbler's lapstone or a switchman's turntable as on the moon's orbit? Only bring a deep observer, and he will make light of the new shop or old cathedral—all one to him—or new circumstances that afflict you. He will find the circumstances not altered; as deep a cloud of mystery on the cause, as dazzling a glory on the invincible law. Is it so important whether

a man wears a shoe-buckle or ties his shoe-lappet with a string? . . . Bring the insight, and he will find as many beauties and heroes and astounding strokes of genius close by him as Shakspeare or Æschylus or Dante beheld. It was in a beggarly heath farm, it was in a mean country inn that Burns found his fancy so sprightly. You find the times and places mean. My friend, stretch a few threads over a common Æolian harp, and put it in your window, and listen to what it says of times and the heart of Nature. I do not think that you will believe that the miracle of Nature is less, the chemical power worn out. Watch the breaking morning, the enchantments of the sunset.

¶ If I had young men to reach, I should say to them, Keep the intellect sacred. Revere it. Give all to it. Its oracles countervail all. Attention is its acceptable prayer. Sit low and wait long; and know that, next to being its minister, like Aristotle, and perhaps better than that, is the profound reception and sympathy, without ambition which secularizes and trades it. Go sit with the Hermit in you, who knows more than you do. You will find life enhanced, and doors opened to grander entertainments. Yet all comes easily that he does, as snow and vapor, heat, wind and light. Power costs nothing to the powerful. I should say to them, Do what you can do. He that draws on his own talent cannot be overshadowed or supplanted. . . . Homage to truth discriminates good and evil. Power never departs from it.

SOCIETY is always taken by surprise at any new example of common sense and of simple justice, as at a wonderful discovery.

¶ Our colleges may differ much in the scale of requirements, and the examination for admission and the examination for degrees and honors may be lax in this college and severe in that, and you may find facilities, translations, syllabuses and tutors here or there to coach you through, but 't is very certain that an examination is yonder before us and an examining committee that cannot be escaped nor deceived, that every scholar is to be put fairly on his own powers and must hear the questions proposed, and answer them by himself, and receive honor or dishonor according to the fidelity shown. For the men and women of your time, the circle of your friends and employers, your conditions, the invisible world, are the interrogators. . . .

¶ When the great painter was told by a dauber, "I have painted five pictures whilst you have made one," he replied, "*Pingo in æternitatem.*" "Study for eternity smiled on me," says Van Helmont. And it were a good rule to read some lines at least every day that shall not be of the day's occasion or task, but of study for eternity.

¶ I have detained you too long; but it is the privilege of the moral sentiment to be every moment new and commanding, and old men cannot see the powers of society, the institutions, the laws under which they have lived, passing, or soon to pass, into the hands of you and your contemporaries, without an earnest wish that you have caught sight of your high calling, your vast possibilities and inspiring duties.

COUNTRY LIFE

THE Teutonic race have been marked in all ages by a trait which has received the name of Earth-hunger, a love of possessing land. It is not less visible in that branch of the family which inhabits America. Nor is it confined to farmers, speculators, and filibusters, or conquerors. The land, the care of land, seems to be the calling of the people of this new country, of those, at least, who have not some decided bias, driving them to a particular craft, as a born sailor or machinist. The capable and generous, let them spend their talent on the land. Plant it, adorn it, study it, it will develop in the cultivator the talent it requires.

¶ The avarice of real estate native to us all covers instincts of great generosity, namely, all that is called the love of Nature, comprising the largest use and the whole beauty of a farm or landed estate. Travel and walking have this apology, that Nature has impressed on savage men periodical or secular impulses to emigrate, as upon lemmings, rats and birds. The Indians go in summer to the coast, for fishing; in winter, to the woods. The nomads wander over vast territory, to find their pasture. Other impulses hold us to other habits. As the increasing population finds new values in the ground, the nomad life is given up for settled homes. But the necessity of exercise and the nomadic instinct are always stirring the wish to travel, and in the spring and summer, it commonly gets the victory. Chaucer notes of the month of April,

> "Than longen folk to goon on pilgrymages,
> And palmers for to seken straunge strondes,
> To ferne halwes, couthe in sondry londes."

And, in the country, Nature is always inviting to the compromise of walking as soon as we are released from severe labor. Linnæus, early in life, read a discourse at the University of Upsala on the necessity of travelling in one's own country, based on the conviction that Nature was inexhaustibly rich, and that in every district were swamps, or beaches, or rocks, or mountains, which were now nuisances, but, if explored, and turned to account, were capable of yielding immense benefit. At Upsala, therefore, he instituted what were called *herborizations:* he summoned his class to go with him on excursions on foot into the country, to collect plants and insects, birds and eggs. These parties started at seven in the morning, and stayed out till nine in the evening; the Professor was generally attended by two hundred students, and, when they returned, they marched through the streets of Upsala in a festive procession, with flowers in their hats, to the music of drums and trumpets, and with loads of natural productions collected on the way.

¶ Let me remind you what this walker found in his walks. He went into Oland, and found that the farms on the shore were perpetually encroached on by the sea, and ruined by blowing sand. He discovered that the *arundo arenaris*, or beach-grass, had long firm roots, and he taught them to plant it for the protection of their shores. In Tornea, he found the people suffering every spring from the loss of their cattle, which died by some frightful distemper, to the number of fifty or a hundred in a year. Linnæus walked out to examine the meadow into which they were first turned out to grass, and found it a bog, where the water-hemlock grew in abundance, and had evidently been cropped plentifully by the animals in feeding. He found the plant also dried in their cut hay. He showed them that the whole evil might be prevented by employing a woman for a month to eradicate the noxious plants. When the shipyards were infested with rot, Linnæus was sent to provide some remedy. He studied the insects that infested the timber, and found that they laid their eggs in the logs within certain days in April

and he directed that during ten days, at that time of the year, the logs should be immersed under the water, which being done, the timber was found to be uninjured.

¶ He found that the gout, to which he was subject, was cured by wood-strawberries. He had other remedies. When Kalm returned from America, Linnæus was laid up with severe gout. But the joy in his return, and the curiosity to see his plants, restored him instantly, and he found an old friend as good as the treatment by wood-strawberries. He learned the secret of making pearls in the river-pearl mussel. He found out that a terrible distemper which sometimes proves fatal in the north of Europe, was occasioned by an animalcule, which he called *Furia infernalis*, which falls from the air on the face, or hand, or other uncovered part, burrows into it, multiplies and kills the sufferer. By timely attention, it is easily extracted.

¶ He examined eight thousand plants; and examined fishes, insects, birds, quadrupeds; and distributed the animal, vegetable and mineral kingdoms. And if, instead of running about in the hotels and theatres of Europe, we would, manlike, see what grows, or might grow, in Massachusetts, stock its gardens, drain its bogs, plant its miles and miles of barren waste with oak and pine, and following what is usually the natural suggestions of these pursuits, ponder the moral secrets which, in her solitudes, Nature has to whisper to us, we were better patriots and happier men.

¶ We have the finest climate in the world, for this purpose, in Massachusetts. If we have coarse days, and dog-days, and white days, and days that are like ice-blinks, we have also yellow days, and crystal days,—days which are neither hot nor cold, but the perfection of temperature. New England has a good climate,—yet, in choosing a farm, we like a southern exposure, whilst Massachusetts, it must be owned, is on the northern slope, towards the Arctic circle, and the Pole. Our climate is a series of surprises, and among our many prognostics of the weather, the only trustworthy one that I know is that, when it is warm, it is a sign that it is going to be cold. The climate needs, therefore, to be corrected by a little anthracite coal,—a little coal in-doors, during much of the year, and thick coats and shoes must be recommended to walkers. I own I prefer the solar to the polar climates. "I have no enthusiasm for Nature," said a French writer, "which the slightest chill will not instantly destroy."

FEW men know how to take a walk. The qualifications are endurance, plain clothes, old shoes, an eye for Nature, good humor, vast curiosity, good speech, good silence and nothing too much. A loud singer, or a story-teller, or a vain talker profanes the river and the forest, and is nothing like so good company as a dog.

¶ But we cannot overpraise the comfort and the beauty of the climate in the best days of the year. In summer, we have for weeks a sky of Calcutta, yielding the richest growth, maturing plants which require strongest sunshine, and scores of days when the heat is so rich, and yet so tempered, that it is delicious to live.

¶ The importance to the intellect of exposing the body and brain to the fine mineral and imponderable agents of the air makes the chief interest in the subject. "So exquisite is the structure of the cortical glands," said the old physiologist Malpighi, "that when the atmosphere is ever so slightly vitiated or altered, the brain is the first part to sympathize and to undergo a change of state." We are very sensible of this, when, in midsummer, we go to the sea-

shore, or to mountains, or when, after much confinement to the house, we go abroad into the landscape, with any leisure to attend to its soothing and expanding influences. The power of the air was the first explanation offered by the early philosophers of the mutual understanding that men have. "The air," said Anaximenes, "is the soul, and the essence of life. By breathing it, we become intelligent, and, because we breathe the same air, understand one another." Plutarch thought it contained the knowledge of the future. "If it be true that souls are naturally endowed with the faculty of prediction, and that the chief cause that excites that faculty is a certain temperature of air and winds," etc. Even Lord Bacon said, "The Stars inject their imagination or influence into the air."

¶ The air that we breathe is an exhalation of all the solid material of the globe. . . . It is the last finish of the work of the Creator. We might say, the Rock of Ages dissolves himself into the mineral air to build up this mystic constitution of man's mind and body.

¶ Walking has the best value as gymnastics for the mind. "You shall never break down in a speech," said Sydney Smith, "on the day on which you have walked twelve miles." In the English universities, the reading men are daily performing their punctual training in the boat-clubs, or a long gallop of many miles in the saddle, or, taking their famed "constitutionals," walks of eight and ten miles. "Walking," said Rousseau, "has something which animates and vivifies my ideas." And Plato said of exercise that "it would almost cure a guilty conscience." "For the living out of doors, and simple fare, and gymnastic exercises, and the morals of companions, produce the greatest effect on the way of virtue and of vice."

¶ Few men know how to take a walk. The qualifications of a professor are endurance, plain clothes, old shoes, an eye for Nature, good humor, vast curiosity, good speech, good silence and nothing too much. If a man tells me that he has an intense love of Nature, I know, of course, that he has none. Good observers have the manners of trees and animals, their patient good sense, and if they add words, 't is only when words are better than silence. But a loud singer, or a story-teller, or a vain talker profanes the river and the forest, and is nothing like so good company as a dog.

¶ There is also an effect on beauty. . . . De Quincey said, "I have seen Wordsworth's eyes sometimes affected powerfully in this respect. His eyes are not under any circumstances bright, lustrous or piercing, but, after a long day's toil in walking, I have seen them assume an appearance the most solemn and spiritual that it is possible for the human eye to wear. The light which resides in them is at no time a superficial light, but, under favorable accidents, it is a light which seems to come from depths below all depths; in fact, it is more truly entitled to be held 'the light that never was on land or sea,' a light radiating from some far spiritual world, than any that can be named." But De Quincey prefixes to this description of Wordsworth a little piece of advice, which I wonder has not attracted more attention. "The depth and subtlety of the eyes varies exceedingly with the state of the stomach, and, if young ladies were aware of the magical transformations which can be wrought in the depth and sweetness of the eye by a few weeks' exercise, I fancy we should see their habits in this point altered greatly for the better."

¶ For walking, you must have a broken country. In Illinois, everybody rides. There is no good walk in that state. The reason is, a square yard of it is as good as a hundred miles. You can distinguish from the cows a horse feeding, at the distance of five miles, with the naked eye. Hence, you have the monotony of Holland, and when you step out of the door can see all that you will have seen when you come home. In Massachusetts, our land is agreeably broken, and is permeable like a park, and not like some towns in the more broken country of New Hampshire, built on three or four hills having each

one side at forty-five degrees and the other side perpendicular: so that if you go a mile, you have only the choice whether you will climb the hill on your way out or on your way back. The more reason we have to be content with the felicity of our slopes in Massachusetts, undulating, rocky, broken and surprising, but without this alpine inconveniency. Twenty years ago in Northern Wisconsin the pinery was composed of trees so big, and so many of them, that it was impossible to walk in the country, and the traveller had nothing for it but to wade in the streams. One more inconveniency, I remember, they showed me in Illinois, that, in the bottom lands, the grass was fourteen feet high. We may well enumerate what compensating advantages we have over that country, for 't is a commonplace, which I have frequently heard spoken in Illinois, that it was a manifest leading of the Divine Providence that the New England states should have been first settled, before the Western country was known, or they would never have been settled at all.

WHEN Nero advertised for a new luxury, a walk in the woods should have been offered. 'T is one of the secrets for dodging old age. For Nature makes a like impression on age as on youth. Then I recommend it to people who are growing old, against their will.

¶ The privilege of the countryman is the culture of the land, the laying out of grounds and gardens, the orchard and the forest. The Rosaceous tribe in botany, including the apple, pear, peach and cherry, are coeval with man. The apple is our national fruit. In October, the country is covered with its ornamental harvests. The American sun paints itself in these glowing balls amid the green leaves, the social fruit, in which Nature has deposited every possible flavor; whole zones and climates she has concentrated into apples. I am afraid you do not understand values. Look over the fence at the farmer who stands there. He makes every cloud in the sky, and every beam of the sun, serve him. His trees are full of brandy. He saves every drop of sap, as if it were wine. A few years ago those trees were whipsticks. Now, every one of them is worth a hundred dollars. Observe their form; not a branch nor a twig is to spare. They look as if they were arms and fingers, holding out to you balls of fire and gold. One tree yields the rent of an acre of land. Yonder pear has every property which should belong to a tree. It is hardy, and almost immortal. It accepts every species of nourishment, and yet could live, like an Arab, on air and water. It grows like the ash Ygdrasil. It seems to me much that I have brought a skilful chemist into my ground, and keep him there overnight, all day, all summer, for an art he has, out of all kinds of refuse rubbish to manufacture Virgaliens, Bergamots, and Seckels, in a manner which no confectioner can approach, and his method of working is no less beautiful than the result.

¶ In old towns there are always certain paradises known to the pedestrian, old and deserted farms, where the neglected orchard has been left to itself, and whilst some of its trees decay, the hardier have held their own. I know a whole district, Estabrook Farm, made up of wide, straggling orchards, where the apple-trees strive with and hold their ground against the native forest-trees: the apple growing with profusion that mocks the pains taken by careful cockneys, who come out into the country, plant young trees and watch them dwindling. Here, no hedges are wanted; the wide distance from any population is fence enough: the fence is a mile wide. Here are varieties of apple not found in

Downing or Loudon. The "Tartaric" variety, and "Cow-apple," and the "Bite-me-if-you-dare," the "Beware-of-this." Apples of a kind which I remember in boyhood, each containing a barrel of wind and half a barrel of cider. But there was a contest between the old orchard and the invading forest-trees, for the possession of the ground, of the whites against the Pequots, and if the handsome savages win, we shall not be losers. . . .

¶ According to the common estimate of farmers, the wood-lot yields its gentle rent of six per cent., without any care or thought, when the owner sleeps or travels, and it is subject to no enemy but fire. Evelyn quotes Lord Caernarvon's saying, "Wood is an excrescence of the earth provided by God for the payment of debts."

¶ When Nero advertised for a new luxury, a walk in the woods should have been offered. 'T is one of the secrets for dodging old age. For Nature makes a like impression on age as on youth. Then I recommend it to people who are growing old, against their will. A man in that predicament, if he stands before a mirror, or among young people, is made quite too sensible of the fact; but the forest awakes in him the same feeling it did when he was a boy, and he may draw a moral from the fact that 't is the old trees that have all the beauty and grandeur. I admire the taste which makes the avenue to a house, were the house never so small, through a wood; besides the beauty, it has a positive effect on manners, as it disposes the mind of the inhabitant and of his guests to the deference due to each. Some English reformers thought the cattle made all this wide space necessary between house and house, and that, if there were no cows to pasture, less land would suffice. But a cow does not need so much land as the owner's eyes require between him and his neighbor.

¶ Our Aryan progenitors in Asia celebrated the winds as the conveying Maruts, "traversers of places difficult of access. Stable is their birthplace in the sky, but they are agitators of heaven and earth, who shake all around like the top of a tree. Because they drive the clouds, they have harnessed the spotted deer to their chariot; they are coming with weapons, war-cries and decorations. I hear the cracking of the whips in their hands. I praise their sportive resistless strength. They are the generators of speech. They drive before them in their course the long, vast, uninjurable, rain-retaining cloud. Wherever they pass, they fill the way with clamor. Every one hears their noise. The lightning roars like a parent cow that bellows for its calf, and the rain is set free by the Maruts. Maruts, as you have vigor, invigorate mankind! Aswins (Waters), long-armed, good-looking Aswins! bearers of wealth, guides of men, harness your car! Ambrosia is in you, in you are medicinal herbs." The Hindoos called fire Agni, born in the woods, bearer of oblations, smoke-bannered and light-shedding, lord of red coursers; the guest of man; protector of people in villages; the sacrificer visible to all, thousand-eyed, all-beholding, of graceful form and whose countenance is turned on all sides.

¶ What uses that we know belong to the forest, and what countless uses that we know not! How an Indian helps himself with fibre of milkweed, or withe-bush, or wild hemp, or root of spruce, black or white, for strings; making his bow of hickory, birch, or even a fir-bough, at a pinch; hemlock bark for his roof, hair-moss or fern for his bed. He goes to a white birch-tree, and can fit his leg with a seamless boot, or a hat for his head. He can draw sugar from the maple, food and antidotes from a hundred plants. He knows his way in a straight line from watercourse to watercourse, and you cannot lose him in the woods. He consults by way of natural compass, when he travels: (1) large pine-trees, which bear more numerous branches on their southern side; (2) ant-hills, which have grass on their south and whortle-berries on the north; (3) aspens, whose bark is rough on the north and smooth on the south side. All his knowledge is for use, and

it only appears in use, whilst white men have theirs also for talking purposes.

¶ I am a very indifferent botanist, but I admire that perennial four-petalled flower, which has one gray petal, one green, one red, and one white. I think sometimes how many days could Methuselah go out and find something new! In January the new snow has changed the woods so that he does not know them; has built sudden cathedrals in a night. In the familiar forest he finds Norway and Russia in the masses of overloading snow which break all that they cannot bend. In March, the thaw, and the sounding of the south wind, and the splendor of the icicles. On the pond there is a cannonade of a hundred guns, but it is not in honor of election of any President. He went forth again after the rain; in the cold swamp, the buds are swollen, the *ictodes* prepares its flower, and the mallows and mouse-ear. The mallows the Greeks held sacred as giving the first sign of the sympathy of the earth with the celestial influences. The next day the Hylas were piping in every pool, and a new activity among the hardy birds, the premature arrival of the bluebird, and the first northward flight of the geese, who cannot keep their joy to themselves, and fly low over the farms. In May, the bursting of the leaf,—the oak and maple are red with the same colors on the new leaf which they will resume in autumn when it is ripe. In June, the miracle works faster,

> Painting with white and red the moors
> To draw the nations out of doors.

Man feels the blood of thousands in his body, and pumps the sap of all this forest through his arteries; the loquacity of all birds in the morning; and the immensity of life seems to make the world deep and wide. In August, when the corn is grown to be a resort and protection to woodcocks and small birds, and when the leaves whisper to each other in the wind, we observe already that the leaf is sere, that a change has passed on the landscape. The world has nothing to offer more rich or entertaining than the days which October always brings us, when, after the first frosts, a steady shower of gold falls in the strong south wind from the chestnuts, maples and hickories: all the trees are wind-harps, filling the air with music; and all men become poets, and walk to the measure of rhymes they make or remember. The dullest churl begins to quaver. The forest in its coat of many colors reflects its varied splendor through the softest haze. The witch-hazel blooms to mark the last hour arrived, and that Nature has played out her summer score. The dry leaves rustle so loud, as we go rummaging through them, that we can hear nothing else. The leaf in our dry climate gets fully ripe, and, like the fruit when fully ripe, acquires fine color, whilst, in Europe, the damper climate decomposes it too soon.

'TIS a commonplace, which I have frequently heard spoken in Illinois, that it was a manifest leading of the Divine Providence that the New England states should have been first settled, before the Western country was known, or they would never have been settled at all.

¶ But the pleasures of garden, orchard and wood must be alternated. We know the healing effect on the sick of change of air,—the action of new scenery on the mind is not less fruitful. We must remember that man is a natural nomad, and his old propensities will stir at midsummer, and send him, like an Indian, to the sea. The influence of the ocean on the love of liberty, I have mentioned elsewhere. Its power on the mind in sharpening the perceptions has made the sea the famous educator of our race.

The history of the world,—what is it but the doings about the shores of the Mediterranean Sea, and the Atlantic? . . .

¶ What freedom of grace has the sea with all this might! . . . The freedom makes the observer feel as a slave. Our expression is so thin and cramped! Can we not learn here a generous eloquence? This was the lesson our starving poverty wanted. . . . At Niagara, I have noticed, that, as quick as I got out of the wetting of the Fall, all the grandeur changed into beauty. You cannot keep it grand, 't is so quickly beautiful; and the sea gave me the same experience. 'T is great and formidable, when you lie down in it, among the rocks. But, on the shore, at one rod's distance, 't is changed into a beauty as of gems and clouds. Shores in sight of each other in a warm climate make boat-builders; and whenever we find a coast broken up into bays and harbors, we find an instant effect on the intellect and industry of the people.

ITS power on the mind in sharpening the perceptions has made the sea the famous educator of our race. The history of the world,—what is it but the doings about the shores of the Mediterranean Sea, and the Atlantic?

¶ On the seashore the play of the Atlantic with the coast! What wealth is here! Every wave is a fortune; one thinks of Etzlers and great projectors who will yet turn all this waste strength to account: what strength and fecundity, from the sea-monsters, hugest of animals, to the primary forms of which it is the immense cradle, and the phosphorescent infusories;—it is one vast rolling bed of life, and every sparkle is a fish. What freedom and grace with all this might! The seeing so excellent a spectacle is a certificate to the mind that all imaginable good shall yet be realized. The sea is the chemist that dissolves the mountain and the rock; pulverizes old continents, and builds new;—forever redistributing the solid matter of the globe; and performs an analogous office in perpetual new transplanting of the races of men over the surface, the Exodus of nations. We may well yield us for a time to its lessons. But the nomad instinct, as I said, persists to drive us to fresh fields and pastures new. Indeed the variety of our moods has an answering variety in the face of the world, and the sea drives us back to the hills.

¶ Dr. Johnson said of the Scotch mountains, "The appearance is that of matter incapable of form or usefulness, dismissed by Nature from her care." The poor blear-eyed doctor was no poet. Like Charles Lamb, he loved the sweet security of streets. It was said of him that "he preferred the Strand to the Garden of the Hesperides." But this is not the experience of imaginative men, nor of men with good eyes and susceptible organizations. "For my own part," says Linnæus, "I have enjoyed good health, except a slight languor, but as soon as I got upon the Norway Alps I seemed to have acquired a new existence. I felt as if relieved from a heavy burden. Then, spending a few days in the low country of Norway, though without committing the least excess, my languor or heaviness returned. When I again ascended the Alps, I revived as before." And he celebrates the health and performance of the Laps as the best walkers of Europe. "Not without admiration, I have watched my two Lap companions, in my journey to Finmark, one, my conductor, the other, my interpreter. For after having climbed the Alps, whilst I, a youth of twenty-five years, was spent and tired, like one dead, and lay down as if to die in those ends of the world, these two old men, one fifty,

one seventy years, running and playing like boys, felt none of the inconveniences of the road, although they were both loaded heavily enough with my baggage. I saw men more than seventy years old put their heel on their own neck, without any exertion. O holy simplicity of diet, past all praise!"

¶ But beside their sanitary and gymnastic benefit, mountains are silent poets, and a view from a cliff over a wide country undoes a good deal of prose, and reinstates us wronged men in our rights. The imagination is touched. There is some pinch and narrowness to us, and we are glad to see the world, and what amplitudes it has, of meadow, stream, upland, forest and sea, which yet are lanes and crevices to the great space in which the world shines like a cockboat in the sea.

THE crowd in the cities, at the hotels, theatres, card-tables, the speculators who rush for investment, at ten per cent., are all more or less mad. Seek in the fields the health of the mind!

¶ Of the finer influences, I shall say that they are not less positive, if they are indescribable. If you wish to know the shortcomings of poetry and language, try to reproduce the October picture to a city company,—and see what you make of it. There is somewhat finer in the sky than we have senses to appreciate. It escapes us, and yet is only just beyond our reach. Is all this beauty to perish? Where is he who is to save the perfect moment, and cause that this beauty shall not be lost? Where is he who has senses fine enough to catch the inspiration of the landscape? The mountains in the horizon acquaint us with finer relations to our friends than any we sustain.

¶ I think 't is the best of humanity that goes out to walk. In happy hours, I think all affairs may be wisely postponed for this walking. Can you hear what the morning says to you, and believe *that?* Can you bring home the summits of Wachusett, Greylock, and the New Hampshire hills? the Savin groves of Middlesex? the sedgy ripples of the old Colony ponds? the sunny shores of your own bay, and the low Indian hills of Rhode Island? the savageness of pine-woods? Can you bottle the efflux of a June noon, and bring home the tops of Uncanoonuc? The landscape is vast, complete, alive. We step about, dibble and dot, and attempt in poor linear ways to hobble after those angelic radiations. The gulf between our seeing and our doing is a symbol of that between faith and experience. . . .

¶ Our schools and colleges strangely neglect the general education of the eye. Every acquisition we make in the science of beauty is so sweet that I think it is cheaply paid for by what accompanies it, of course, the prating and affectation of connoisseurship. The facts disclosed by Winkelmann, Goethe, Bell, Greenough, Ruskin, Garbett, Penrose, are joyful possessions, which we cannot spare, and which we rank close beside the disclosures of natural history. There are probably many in this audience who have tried the experiment on a hilltop, and many who have not, of bending the head so as to look at the landscape with your eyes upside down. What new softness in the picture! It changes the landscape from November into June. My companion and I remarked from the hilltop the prevailing sobriety of color, and agreed that russet was the hue of Massachusetts, but on trying this experiment of inverting the view he said, "There is the Campagna! and Italy is Massachusetts upside down." The effect is remarkable, and perhaps is not explained. An ingenious

friend of mine suggested that it was because the upper part of the eye is little used, and therefore retains more susceptibility than the lower, and returns more delicate impressions.

¶ Dr. Johnson said, "Few men know how to take a walk," and it is certain that Dr. Johnson was not one of the few. It is a fine art, requiring rare gifts and much experience. No man is suddenly a good walker. Many men begin with good resolution, but they do not hold out, and I have sometimes thought it would be well to publish an Art of Walking, with Easy Lessons for Beginners. These we call apprentices. Those who persist from year to year, and obtain at last an intimacy with the country, and know all the good points within ten miles, with the seasons for visiting each, know the lakes, the hills, where grapes, berries and nuts, where the rare plants are; where the best botanic ground; and where the noblest landscapes are seen, and are learning all the time;—these we call professors. . . .

¶ Nature kills egotism and conceit; deals strictly with us; and gives sanity; so that it was the practice of the Orientals, especially of the Persians, to let insane persons wander at their own will out of the towns, into the desert, and, if they liked, to associate with wild animals. In their belief, wild beasts, especially gazelles, collect around an insane person, and live with him on a friendly footing. The patient found something curative in that intercourse, by which he was quieted, and sometimes restored. But there are more insane persons than are called so, or are under treatment in hospitals. The crowd in the cities, at the hotels, theatres, card-tables, the speculators who rush for investment, at ten per cent., twenty per cent., cent. per cent., are all more or less mad,—I need not say it now in the crash of bankruptcy;—these point the moral, and persuade us to seek in the fields the health of the mind.

¶ I hold all these opinions on the power of the air to be substantially true. The poet affirms them; the religious man, going abroad, affirms them; the patriot on his mountains or his prairie affirms them; the contemplative man affirms them.

¶ Nature tells everything once. Our microscopes are not necessary. She shows every fact in large bodies somewhere. On the seashore, she reveals to the eye, by the sea-line, the true curve of the globe. It does not need a barometer to find the height of mountains. The line of snow is surer than the barometer: and the zones of plants, the savin, the pine, vernal gentian, plum, linnæa and the various lichens and grapes are all thermometers which cannot be deceived, and will not lie. They are instruments by the best maker. The earthquake is the first chemist, goldsmith and brazier: he wrought to purpose in craters, and we borrowed the hint in crucibles. When I look at natural structures, as at a tree, or the teeth of a shark, or the anatomy of an elephant, I know that I am seeing an architecture and carpentry which has no sham, is solid and conscientious, which perfectly answers its end, and has nothing to spare. But in all works of human art there is deduction to be made for blunder and falsehood. Therefore Goethe, whose whole life was a study of the theory of art, said no man should be admitted to his Republic, who was not versed in Natural History.

¶ The college is not so wise as the mechanic's shop, nor the quarter-deck as the forecastle. Witness the insatiable interest of the white man about the Indian, the trapper, the hunter and sailor. In a water-party in which many scholars joined, I noted that the skipper of the boat was much the best companion. The scholars made puns. The skipper saw instructive facts on every side, and there was no trifle to him. How startling are the hints of wit we detect in the horse and dog, and in the wild animals! By what compass the geese steer, and the herring migrate, we would so gladly know. What the dog knows, and how he knows it, piques us more than all we heard from the chair of metaphysics.

¶ Is it not an eminent convenience to have in your town a person who knows

where arnica grows, or sassafras, or pennyroyal, and the mints, or the scented goldenrod, or punk for slow-match; or the slippery-elm, or wild cherries, or wild pears? Where are the best hazlenuts, chestnuts and shagbarks? Where the white grapes? Where are the choice apple-trees? And what are the poisons? Where is the Norway pine, where the beech, where the epigæa, the linnæa, or sanguinaria, or orchis pulcherrima, or sundew, or laurus benzoin, or pink huckleberry? where trout, woodcocks, wild bees, pigeons, where the bittern (stake-driver) can be seen and heard, where the Wilson's plover can be seen and heard?

I THINK 't is the best of humanity that goes out to walk. In happy hours, I think all affairs may be wisely postponed for this walking.

¶ The true naturalist can go wherever woods or waters go; almost where a squirrel or a bee can go, he can; and no man is asked for leave. Sometimes the farmer withstands him in crossing his lots, but 't is to no purpose; the farmer could as well hope to prevent the sparrows or tortoises. It was their land before it was his, and their title was precedent. My naturalist knew what was on their land, and the farmers did not, and sometimes he brought them ostentatiously gifts of flowers, fruits or rare shrubs they would gladly have paid a price for, and did not tell them that he gathered them in their own woods. Moreover the very time at which he used their land and water (for his boat glided like a trout everywhere unseen) was in hours when they were sound asleep. Before the sun was up, he went up and down to survey his possessions, and passed onward and left them, before the second owners, as he called them, were awake.

¶ If we should now say a few words on the advantages that belong to the conversation with Nature, I might set them so high as to make it a religious duty. 'T is the greatest use and the greatest beauty. 'T is the lesson we were put hither to learn. What truth, and what elegance belong to every fact of Nature, we know. And the study of them awakens the like truth and elegance in the student. One thing, the lover of Nature cannot tell the best thing he knows. . . .

¶ What alone possesses interest for us is the *naturel* of each man. This is that which is the saliency, or principle of levity, the antagonist of matter and gravitation, and as good as they. This is forever a surprise, and engaging, and lovely. We can't be satiated with knowing it, and about it. It is related to the purest of the world, to gravity, the growth of grass, and the angles of crystals. Nature speaks to the imagination; first, through her grand style,—the hint of immense force and unity which her works convey; second, because her visible productions and changes are the nouns of language, and our only means of uttering the invisible thought. Every new perception of the method and beauty of Nature gives a new shock of surprise and pleasure; and always for this double reason: first, because they are so excellent in their primary fact, as frost, or cloud, or fire, or animal: and, secondly, because we have an instinct that they express a grander law.

¶ 'T is not easy to say again what Nature says to us. But it is the best part of poetry, merely to name natural objects well. A farmer's boy finds delight in reading the verses under the Zodiacal vignettes in the Almanac. What is the merit of Thomson's Seasons but copying a few of the pictures out of this vast book into words, without a hint of

what they signify, and the best passages of great poets, old and new, are often simple enumerations of some features of landscape. And as man is the object of Nature, what we study in Nature is man. 'T is true, that man only interests us. We are not to be imposed upon by the apparatus and the nomenclature of the physiologist. Agassiz studies year after year fishes and fossil anatomy of saurian, and lizard, and pterodactyl. But whatever he says, we know very well what he means. He pretends to be only busy with the foldings of the yolk of a turtle's egg. I can see very well what he is driving at; he means men and women. He talks about lizard, shell-fish and squid, he means John and Mary, Thomas and Ann. For Nature is only a mirror in which man is reflected colossally. Swedenborg or Behman or Plato tried to decipher this hieroglyphic, and explain what rock, what sand, what wood, what fire signified in regard to man.

¶ They may have been right or wrong in any particulars of their interpretation, but it is only our ineradicable belief that the world answers to man, and part to part, that gives any interest in the subject. If we believed that Nature was foreign and unrelated,—some rock on which souls wandering in the Universe were shipwrecked, we should think all exploration of it frivolous waste of time. No, it is bone of our bone, flesh of our flesh, made of us, as we of it. External Nature is only a half. The geology, the astronomy, the anatomy, are all good, but 't is all a half, and—enlarge it by astronomy never so far—remains a half. It requires a will as perfectly organized,—requires man. Astronomy is a cold, desert science, with all its pompous figures,—depends a little too much on the glass-grinder, too little on the mind. 'T is of no use to show us more planets and systems. We know already what matter is, and more or less of it does not signify. He can dispose in his thought of more worlds, just as readily as of few, or one. It is his relation to one, to the first, that imports. Nay, I will say, of the two facts, the world and man, man is by much the larger half.

¶ I know that the imagination . . . . is a coy, capricious power, and does not impart its secret to inquisitive persons. Sometimes a parlor in which fine persons are found, with beauty, culture and sensibility, answers our purpose still better. Striking the electric chain with which we are darkly bound, but that again is Nature, and there we have again the charm which landscape gives us, in a finer form; but the persons must have had the influence of Nature, must know her simple, cheap pleasures, must know what Pindar means when he says that "water is the best of things," and have manners that speak of reality and great elements, or we shall know no Olympus.

¶ Matter, how immensely soever enlarged by the telescope, remains the lesser half. The very science by which it is shown to you argues the force of man. Nature is vast and strong, but as soon as man knows himself as its interpreter, knows that Nature and he are from one source, and that he, when humble and obedient, is nearer to the source, then all things fly into place, then is there a rider to the horse, an organized will, then Nature has a lord.

CONCORD WALKS

WHEN I bought my farm, I did not know what a bargain I had in the bluebirds, bobolinks and thrushes, which were not charged in the bill; as little did I guess what sublime mornings and sunsets I was buying—what reaches of landscape, and what fields and lanes for a tramp. Neither did I fully consider what an indescribable luxury is our Indian river, the Musketaquid, —which runs parallel with the village street and to which every house on that long street has a back door, which leads down through the garden to the river-bank, when a skiff, or a dory, gives you, all summer, access to enchantments, new every day, and all winter, to miles of ice for the skater. And because our river is no Hudson or Mississippi I have a problem long waiting for an engineer, —this,—to what height I must build a tower in my garden that shall show me the Atlantic Ocean from its top—the ocean twenty miles away.

WHEN I bought my farm, I did not know what a bargain I had in the bluebirds, bobolinks and thrushes, which were not charged in the bill; as little did I guess what sublime mornings and sunsets I was buying—what reaches of landscape, and what fields and lanes for a tramp.

¶ Still less did I know what good and true neighbors I was buying, men of thought and virtue, some of them now known the country through for their learning, or subtlety, or active or patriotic power, but whom I had the pleasure of knowing long before the Country did; and of other men not known widely but known at home, farmers,—not doctors of laws but doctors of land, skilled in turning a swamp or a sand-bank into a fruitful field, and, when witch-grass and nettles grew, causing a forest of apple-trees or miles of corn and rye to thrive.

¶ I did not know what groups of interesting school-boys and fair school-girls were to greet me in the highway, and to take hold of one's heart at the School Exhibitions.

¶ "Little joy has he who has no garden," said Saadi. Montaigne took much pains to be made a citizen of Rome; and our people are vain, when abroad, of having the freedom of foreign cities presented to them in a gold box. I much prefer to have the freedom of a garden presented me. When I go into a good garden, I think, if it were mine, I should never go out of it. It requires some geometry in the head to lay it out rightly, and there are many who can enjoy to one that can create it.

¶ Linnæus, who was professor of the Royal Garden at Upsala, took the occasion of a public ceremony to say, "I thank God, who has ordered my fate, that I live in this time, and so ordered it that I live happier than the king of the Persians. You know, fathers and citizens, that I live entirely in the Academy Garden; here is my Vale of Tempe, say rather my Elysium. I possess here all that I desire of the spoils of the East and the West, and, unless I am very much mistaken, what is far more beautiful than Babylonian robes, or vases of the Chinese. Here I learn what I teach. Here I admire the wisdom of the Supreme Artist, disclosing Himself by proofs of every kind, and show them to others." Our people are learning that lesson year by year. As you know, nothing in Europe is more elaborately luxurious than the costly gardens,—as the Boboli at Florence, the Borghese,

the Orsini at Rome, the Villa d'Este at Tivoli; with their greenhouses, conservatories, palm-houses, fish-ponds, sculptured summer-houses and grottoes; but without going into the proud niceties of an European garden, there is happiness all the year round to be had from the square fruit-gardens which we plant in the front or rear of every farmhouse. In the orchard, we build monuments to Van Mons annually.

¶ The place where a thoughtful man in the country feels the joy of eminent domain is in his wood-lot. If he suffer from accident or low spirits, his spirits rise when he enters it. He can spend the entire day therein, with hatchet or pruning-shears, making paths, without remorse of wasting time. He can fancy that the birds know him and trust him, and even the trees make little speeches or hint them. Then he remembers that Allah in his allotment of life "does not count the time which the Arab spends in the chase."

¶ If you can add to the garden a noble luxury, let it be an arboretum. In the arboretum you should have things which are of a solitary excellence, and which people who read of them are hungry to see. Thus plant the *Sequoia Gigantea*, give it room, and set it on its way of ten or fifteen centuries. Bayard Taylor planted two—one died, but I saw the other looking well. Plant the Banian, the Sandal-tree, the Lotus, the Upas, Ebony, Century Aloes, the Soma of the Vedas—*Asclepias Viminalis*, the Mandrake and Papyrus, Dittany, Asphodel, Nepenthe, Hæmony, Moly, Spikenard, Amomum. Make a calendar —your own—of the year, that you may never miss your favorites in their month. As Linnæus made a dial of plants, so shall you of all the objects that guide your walks.

¶ Learn to know the conspicuous planets in the heavens, and the chief constellations. Thus do not forget the 14th of November, when the meteors come, and on some years drop into your house-yard like sky-rockets. And 't is worth remarking, what a man may go through life without knowing, that a common spy-glass, which you can carry in your pocket, will show the satellites of Jupiter, and turned on the Pleiades, or Seven Stars, in which most eyes can only count six,—will show many more, —a telescope in an observatory will show two hundred. How many poems have been written, or, at least attempted, on the lost Pleiad! for though that pretty constellation is called for thousands of years the "Seven Stars," most eyes can only count six.

¶ Horses and carriages are costly toys, but the word park always charms me. I could not find it in my heart to chide the citizen who should ruin himself to buy a patch of heavy oak timber. I admire the taste which makes the avenue to the house—were the house never so small—through a wood;—as it disposes the mind of the inhabitant and of his guest to the deference due to each.

¶ There are two companions, with one or other of whom 't is desirable to go out on a tramp. One is an artist, that is, who has an eye for beauty. If you use a good and skilful companion, you shall see through his eyes; and, if they be of great discernment, you will learn wonderful secrets. In walking with Allston, you shall see what was never before shown to the eye of man. And as the perception of beauty always exhilarates, if one is so happy as to find the company of a true artist, he is a perpetual holiday and benefactor, and ought only to be used like an oriflame or a garland, for feasts and May-days, and parliaments of wit and love.

¶ The other is a naturalist, for the reason that it is much better to learn the elements of geology, of botany, of ornithology and astronomy by word of mouth from a companion than dully from a book. There is so much, too, which a book cannot teach which an old friend can. A man should carry Nature in his head—should know the hour of the day or night, and the time of the year, by the sun and stars; should know the solstice and the equinox, the quarter of the moon and the daily tides.

¶ This is my ideal of the powers of

wealth. Find out what lake or sea Agassiz wishes to explore, and offer to carry him there, and he will make you acquainted with all its fishes: or what district Dr. Gray has not found the plants of,—carry him; or when Dr. Wyman wishes to find new anatomic structures or fossil remains; or when Dr. Charles Jackson or Mr. Hall would study chemistry or mines; and you secure the best company and the best teaching with every advantage.

¶ But the countryman, as I said, has more than he paid for; the landscape is his. I am sorry to say the farmers seldom walk for pleasure. It is a fine art; —there are degrees of proficiency, and we distinguish the professors of that science from the apprentices. But there is a manifest increase in the taste for it. 'T is the consolation of mortal men. It is an old saying that physicians or naturalists are the only professional men who continue their tasks out of study-hours; and the naturalist has no barren places, no winter, and no night, pursuing his researches in the sea, in the ground, in barren moors, in the night even, because the woods exhibit a whole new world of nocturnal animals; in winter, because, remove the snow a little, a multitude of plants live and grow, and there is a perpetual push of buds, so that it is impossible to say when vegetation begins. I think no pursuit has more breath of immortality in it.

¶ I admire in trees the creation of property so clean of tears, or crime, or even care. No lesson of chemistry is more impressive to me than this chemical fact that "Nineteen twentieths of the timber are drawn from the atmosphere." We knew the root was sucking juices from the ground. But the top of the tree is also a tap-root thrust into the public pocket of the atmosphere. This is a highwayman, to be sure. And I am always glad to remember that in proportion to the foliation is the addition of wood. Then they grow, when you wake and when you sleep, at nobody's cost, and for everybody's comfort. Lord Abercorn, when some one praised the rapid growth of his trees, replied, "Sir, they have nothing else to do!"

THAT uncorrupted behavior which we admire in the animals, and in young children, belongs also to the farmer, the hunter, the sailor, the man who lives in the presence of Nature. This is forever a surprise, and engaging, and lovely; we can't be satiated with knowing it.

¶ That uncorrupted behavior which we admire in the animals, and in young children, belongs also to the farmer, the hunter, the sailor, the man who lives in the presence of Nature. Cities force the growth and make him talkative and entertaining, but they make him artificial. What alone possesses interest for us is the *naturel* of each, that which is constitutional to him only. This is forever a surprise, and engaging, and lovely; we can't be satiated with knowing it, and about it, and this is that which the conversation with Nature goes to cherish and to guard.

¶ The man finds himself expressed in Nature. Yet when he sees this annual reappearance of beautiful forms, the lovely carpet, the lovely tapestry of June, he may well ask himself the special meaning of the hieroglyphic, as well as the sense and scope of the whole—and there is a general sense which the best knowledge of the particular alphabet leaves unexplained.

BOSTON

THE old physiologists said, "There is in the air a hidden food of life;" and they watched the effect of different climates. They believed the air of mountains and the seashore a potent predisposer to rebellion. The air was a good republican, and it was remarked that insulary people are versatile and addicted to change, both in religious and secular affairs.

¶ The air that we breathe is an exhalation of all the solid material globe. An aërial fluid streams all day, all night, from every flower and leaf, from every water and soil, from every rock ledge; and from every stratum a different aroma and air according to its quality. According to quality and according to temperature, it must have effect on manners.

¶ There is the climate of the Sahara: a climate where the sunbeams are vertical; where is day after day, sunstroke after sunstroke, with a frosty shadow between. "There are countries," said Howell, "where the heaven is a fiery furnace or a blowing bellows, or a dropping sponge, most parts of the year." Such is the assimilating force of the Indian climate that Sir Erskine Perry says "the usage and opinion of the Hindoos so invades men of all castes and colors who deal with them that all take a Hindoo tint. Parsee, Mongol, Afghan, Israelite, Christian, have all passed under this influence and exchanged a good part of their patrimony of ideas for the notions, manner of seeing and habitual tone of Indian society." He compares it to the geologic phenomenon which the black soil of the Dhakkan offers,—the property, namely, of assimilating to itself every foreign substance introduced into its bosom.

¶ How can we not believe in influences of climate and air, when, as true philosophers, we must believe that chemical atoms also have their spiritual cause why they are thus and not other; that carbon, oxygen, alum and iron, each has its origin in spiritual nature?

¶ Even at this day men are to be found superstitious enough to believe that to certain spots on the surface of the planet special powers attach, and an exalted influence on the genius of man. And it appears as if some localities of the earth, through wholesome springs, or as the *habitat* of rare plants and minerals, or through ravishing beauties of Nature, were preferred before others. There is great testimony of discriminating persons to the effect that Rome is endowed with the enchanting property of inspiring a longing in men there to live and there to die.

¶ Who lives one year in Boston ranges through all the climates of the globe. And if the character of the people has a larger range and greater versatility, causing them to exhibit equal dexterity in what are elsewhere reckoned incompatible works, perhaps they may thank their climate of extremes, which at one season gives them the splendor of the equator and a touch of Syria, and then runs down to a cold which approaches the temperature of the celestial spaces.

¶ It is not a country of luxury or of pictures; of snows rather, of east winds and changing skies; visited by icebergs, which, floating by, nip with their cool breath our blossoms. Not a luxurious climate,—but wisdom is not found with those who dwell at their ease. Give me a climate where people think well and construct well,—I will spend six months there, and you may have all the rest of my years.

¶ What Vasari said, three hundred years ago, of the republican city of Florence might be said of Boston; "that the desire for glory and honor is powerfully generated by the air of that place, in the men of every profession; whereby all who possess talent are impelled to struggle that they may not remain in the same grade with those whom they perceive to be only men like them-

selves, even though they may acknowledge such indeed to be masters; but all labor by every means to be foremost."

¶ We find no less stimulus in our native air; not less ambition in our blood, which Puritanism has not sufficiently chastised; and at least an equal freedom in our laws and customs, with as many and as tempting rewards to toil; with so many philanthropies, humanities, charities, soliciting us to be great and good.

¶ New England is a sort of Scotland. 'T is hard to say why. Climate is much; then, old accumulation of the means, — b o o k s, schools, colleges, literary society;—as New Bedford is not nearer to the whales than New London or Portland, yet they have all the equipments for a whaler ready, and they hug an oil-cask like a brother.

WHO lives one year in Boston ranges through all the climates of the globe. Not a luxurious climate,—but wisdom is not found with those who dwell at their ease. Give me a climate where people think well and construct well,—I will spend six months there, and you may have all the rest of my years.

¶ I do not know that Charles River or Merrimac water is more clarifying to the brain than the Savannah or Alabama rivers, yet the men that drink it get up earlier, and some of the morning light lasts through the day. I notice that they who drink for some little time of the Potomac water lose their relish for the water of the Charles River, of the Merrimac and the Connecticut,—even of the Hudson. I think the Potomac water is a little acrid, and should be corrected by copious infusions of these provincial streams.

¶ Of great cities you cannot compute the influences. In New York, in Montreal, New Orleans and the farthest colonies,—in Guiana, in Guadaloupe,—a middle-aged gentleman is just embarking with all his property to fulfil the dream of his life and spend his old age in Paris; so that a fortune falls into the massive wealth of that city every day in the year. Astronomers come because there they can find apparatus and companions. Chemist, geologist, artist, musician, dancer, because there only are grandees and their patronage, appreciators and patrons. Demand and supply run into every invisible and unnamed province of whim and passion.

¶ Each great city gathers these values and d e l i g h t s for mankind, and comes to be the brag of its age and population. The Greeks thought him unhappy who died without seeing the statue of Jove at Olympia. With still more reason, they praised Athens, the "Violet City." It was said of Rome in its proudest days, looking at the vast radiation of the privilege of Roman citizenship through the t h e n - known world,—"the extent of the city and of the world is the same" (*spatium et urbis et orbis idem*). London now for a thousand years has been in an affirmative or energizing mood; has not stopped growing. Linnæus, like a naturalist, esteeming the globe a big egg, called London the *punctum saliens* in the yolk of the world.

¶ This town of Boston has a history. It is not an accident, not a windmill, or a railroad station, or cross-roads tavern, or an army-barracks grown up by time and luck to a place of wealth; but a seat of humanity, of men of principle, obeying a sentiment and marching loyally whither that should lead them; so that its annals are great historical lines, inextricably national; part of the history of political liberty. I do not speak with any fondness, but the language of coldest history, when I say that Boston commands attention as the town which was appointed in the destiny of nations to lead the civilization of North America.

¶ A capital fact distinguishing this colony from all other colonies was that the persons composing it consented to come on the one condition that the charter should be transferred from the company in England to themselves; and so they brought the government with them.

¶ On the 3d of November, 1620, King James incorporated forty of his subjects, Sir F. Gorges and others, the council established at Plymouth in the county of Devon for the planting, ruling, ordering and governing of New England in America. The territory—conferred on the patentees in absolute property, with unlimited jurisdiction, the sole power of legislation, the appointment of all officers and all forms of government—extended from the 40th to the 48th degree of north latitude, and in length from the Atlantic to the Pacific.

¶ John Smith writes (1624): "Of all the four parts of the world that I have yet seen not inhabited, could I but have means to transplant a colony, I would rather live here than anywhere; and if it did not maintain itself, were we but once indifferently well fitted, let us starve. Here are many isles planted with corn, groves, mulberries, salvage gardens and good harbours. The seacoast, as you pass, shows you all along large cornfields and great troops of well-proportioned people." Massachusetts in particular, he calls "the paradise of these parts," notices its high mountain, and its river, "which doth pierce many days' journey into the entrails of that country." Morton arrived in 1622, in June, beheld the country, and "the more he looked, the more he liked it."

¶ In sixty-eight years after the foundation of Boston, Dr. Mather writes of it, "The town hath indeed three elder Sisters in this colony, but it hath wonderfully outgrown them all, and her mother, Old Boston in England, also; yea, within a few years after the first settlement it grew to be the metropolis of the whole English America."

¶ How easy it is, after the city is built, to see where it ought to stand. In our beautiful bay, with its broad and deep waters covered with sails from every port; with its islands hospitably shining in the sun; with its waters bounded and marked by lighthouses, buoys and seamarks; every foot sounded and charted; with its shores trending steadily from the two arms which the capes of Massachusetts stretch out to sea, down to the bottom of the bay where the city domes and spires sparkle through the haze,—a good boatman can easily find his way for the first time to the State House, and wonder that Governor Carver had not better eyes than to stop on the Plymouth Sands.

¶ But it took ten years to find this out. The colony of 1620 had landed at Plymouth. It was December, and the ground was covered with snow. Snow and moonlight make all places alike; and the weariness of the sea, the shrinking from cold weather and the pangs of hunger must justify them.

¶ But the next colony planted itself at Salem, and the next at Weymouth; another at Medford; before these men, instead of jumping on to the first land that offered, wisely judged that the best point for a city was at the bottom of a deep and islanded bay, where a copious river entered it, and where a bold shore was bounded by a country of rich undulating woodland.

¶ The planters of Massachusetts do not appear to have been hardy men, rather, comfortable citizens, not at all accustomed to the rough task of discoverers; and they exaggerated their troubles. Bears and wolves were many; but early, they believed there were lions; Monadnoc was burned over to kill them. John Smith was stung near to death by the most poisonous tail of a fish, called a sting-ray. In the journey of Rev. Peter Bulkeley and his company through the forest from Boston to Concord they fainted from the powerful odor of the sweetfern in the sun;—like what befell, still earlier, Biorn and Thorfinn, Northmen, in their expedition to the same coast; who ate so many grapes from the wild vines that they were reeling drunk.

The lions have never appeared since,—nor before. Their crops suffered from pigeons and mice. Nature has never again indulged in these exasperations. It seems to have been the last outrage ever committed by the sting-rays or by the sweetfern or by the fox-grapes; they have been of peaceable behavior ever since.

¶ Any geologist or engineer is accustomed to face more serious dangers than any enumerated, excepting the hostile Indians. But the awe was real and overpowering in the superstition with which every new object was magnified. The superstition which hung over the new ocean had not yet been scattered; the powers of the savage were not known; the dangers of the wilderness were unexplored; and in that time terrors of witchcraft, terrors of evil spirits, and a certain degree of terror still clouded the idea of God in the mind of the purest.

THIS town of Boston has a history. It is not an accident, but a seat of humanity, of men of principle, obeying a sentiment and marching loyally whither that should lead them; so that its annals are part of the history of political liberty.

¶ The divine will descends into the barbarous mind in some strange disguise; its pure truth not to be guessed from the rude vizard under which it goes masquerading. The common eye cannot tell what the bird will be, from the egg, nor the pure truth from the grotesque tenet which sheathes it. But by some secret tie it holds the poor savage to it, and he goes muttering his rude ritual or mythology, which yet conceals some grand commandment; as courage, veracity, honesty, or chastity and generosity.

¶ So these Englishmen, with the Middle Ages still obscuring their reason, were filled with Christian thought. They had a culture of their own. They read Milton, Thomas à Kempis, Bunyan and Flavel with religious awe and delight, not for entertainment. They were precisely the idealists of England; the most religious in a religious era. An old lady who remembered these pious people said of them that "they had to hold on hard to the huckleberry bushes to hinder themselves from being translated."

¶ In our own age we are learning to look, as on chivalry, at the sweetness of that ancient piety which makes the genius of St. Bernard, Latimer, Scougal, Jeremy Taylor, Herbert and Leighton. Who can read the fiery ejaculations of Saint Augustine, a man of as clear a sight as almost any other; of Thomas à Kempis, of Milton, of Bunyan even, without feeling how rich and expansive a culture—not so much a culture as a higher life—they owed to the promptings of this sentiment; without contrasting their immortal heat with the cold complexion of our recent wits? Who can read the pious diaries of the Englishmen in the time of the Commonwealth and later, without a sigh that we write no diaries to-day? Who shall restore to us the odoriferous Sabbaths which made the earth and the humble roof a sanctity.

¶ This spirit, of course, involved that of Stoicism, as, in its turn, Stoicism did this. Yet how much more attractive and true that this piety should be the central trait and the stern virtues follow than that Stoicism should face the gods and put Jove on his defence. That piety is a refutation of every skeptical doubt. These men are a bridge to us between the unparalleled piety of the Hebrew epoch and our own. These ancient men, like great gardens with great banks of flowers, send out their perfumed breath across the great tracts of time. How

needful is David, Paul, Leighton, Fénelon, to our devotion. Of these writers, of this spirit which defined them, I will say with Confucius, "If in the morning I hear of the right way, and in the evening die, I can be happy."

¶ I trace to this deep religious sentiment and to its culture great and salutary results to the people of New England; first, namely, the culture of the intellect, which has always been found in the Calvinistic Church. The colony was planted in 1620; in 1638 Harvard College was founded. The General Court of Massachusetts in 1647, "To the end that learning may not be buried in the graves of the forefathers, ordered, that every township, after the Lord has increased them to the number of fifty householders, shall appoint one to teach all children to write and read; and where any town shall increase to the number of a hundred families, they shall set up a Grammar School, the Masters thereof being able to instruct youth so far as they may be fitted for the University."

THERE are always men ready for adventures. The thirst for adventure is the vent which Destiny offers; a war, a crusade, a gold-mine, a new country, speak to the imagination and offer swing and play to the confined powers.

¶ Many and rich are the fruits of that simple statute. The universality of an elementary education in New England is her praise and her power in the whole world. To the schools succeeds the village lyceum, — now very general throughout all the country towns of New England,—where every week through the winter, lectures are read and debates sustained which prove a college for the young rustic. Hence it happens that the young farmers and mechanics, who work all summer in the field or shop, in the winter often go into a neighboring town to teach the district school arithmetic and grammar. As you know, too, New England supplies annually a large detachment of preachers and schoolmasters and private tutors to the interior of the South and West.

¶ New England lies in the cold and hostile latitude, which by shutting men up in houses and tight and heated rooms a large part of the year, and then again shutting up the body in flannel and leather, defrauds the human being in some degree of his relations to external nature; takes from the muscles their suppleness, from the skin its exposure to the air; and the New Englander, like every other Northerner, lacks that beauty and grace which the habit of living much in the air, and the activity of the limbs not in labor but in graceful exercise, tend to produce in climates nearer to the sun. Then the necessity, which always presses the Northerner, of providing fuel and many clothes and tight houses and much food against the long winter, makes him anxiously frugal, and generates in him that spirit of detail which is not grand and enlarging, but goes rather to pinch the features and degrade the character.

¶ As an antidote to the spirit of commerce and of economy, the religious spirit—always enlarging, firing man, prompting the pursuit of the vast, the beautiful, the unattainable—was especially necessary to the culture of New England. In the midst of her laborious and economical and rude and awkward population, where is little elegance and no facility; with great accuracy in details, little spirit of society or knowledge of the world, you shall not unfrequently meet that refinement which no education and no habit of society can bestow; which makes the elegance of wealth look stupid, and unites itself by natural affinity to the highest minds

of the world; nourishes itself on Plato and Dante, Michael Angelo and Milton; on whatever is pure and sublime in art, —and I may say, gave a hospitality in this country to the spirit of Coleridge and Wordsworth, and to the music of Beethoven, before yet their genius had found a hearty welcome in Great Britain.

¶ I do not look to find in England better manners than the best manners here. We can show native examples and I may almost say (travellers as we are) natives who never crossed the sea who possess all the elements of noble behavior.

¶ It is the property of the religious sentiment to be the most refining of all influences. No external advantages, no good birth or breeding, no culture of the taste, no habit of command, no association with the elegant,—even no depth of affection that does not rise to a religious sentiment, can bestow that delicacy and grandeur of bearing which belong only to a mind accustomed to celestial conversation. All else is coarse and external; all else is tailoring and cosmetics beside this; for thoughts are expressed in every look or gesture, and these thoughts are as if angels had talked with the child.

¶ By this instinct we are lifted to higher ground.

¶ The religious sentiment gave the iron purpose and arm. That colonizing was a great and generous scheme, manly meant and manly done. When one thinks of the enterprises that are attempted in the heats of youth, the Zoars, New Harmonies and Brook Farms, Oakdales and Phalansteries, which have been so profoundly ventilated, but end in a protracted picnic which after a few weeks or months dismisses the partakers to their old homes, we see with new increased respect the solid, well-calculated scheme of these emigrants, sitting down hard and fast where they came, and building their empire by due degrees.

¶ John Smith says, "Thirty, forty, or fifty sail went yearly in America only to trade and fish, but nothing would be done for a plantation, till about some hundred of your Brownists of England, Amsterdam and Leyden went to New Plymouth; whose humorous ignorances caused them for more than a year to endure a wonderful deal of misery, with an infinite patience."

THE power of labor which belongs to the English race fell here into a climate which befriended it, and into a maritime country made for trade. There was never, I suppose, a more rapid expansion in population, wealth and all the elements of power, than was exhibited here.

¶ What should hinder that this America, so long kept in reserve from the intellectual races until they should grow to it, glimpses being afforded which spoke to the imagination, yet the firm shore hid until science and art should be ripe to propose it as a fixed aim, and a man should be found who should sail steadily west sixty-eight days from the port of Palos to find it, —what should hinder that this New Atlantis should have its happy ports, its mountains of security, its gardens fit for human abode where all elements were right for health, power and virtue of man?

¶ America is growing like a cloud, towns on towns, states on states; and wealth (always interesting, since from wealth power cannot be divorced) is piled in every form invented for comfort or pride.

¶ If John Bull interest you at home, come and see him under new conditions, come and see the Jonathanization of John.

¶ There are always men ready for adventures,—more in an over-governed,

over-peopled country, where all the professions are crowded and all character suppressed, than elsewhere. The thirst for adventure is the vent which Destiny offers; a war, a crusade, a gold-mine, a new country, speak to the imagination and offer swing and play to the confined powers.

¶ The American idea, Emancipation, appears in our freedom of intellection, in our reforms and in our bad politics: it has, of course, its sinister side, which is most felt by the drilled and scholastic, but if followed it leads to heavenly places.

¶ European and American are each ridiculous out of his sphere. There is a Columbia of thought and art and character, which is the last and endless sequel of Columbus's adventure.

THE planters of Massachusetts do not appear to have been hardy men, rather, comfortable citizens, not at all accustomed to the rough task of discoverers; and they exaggerated their troubles. Any geologist or engineer is accustomed to face more serious dangers than any enumerated, excepting the hostile Indians.

¶ European critics regret the detachment of the Puritans to this country without aristocracy; which a little reminds one of the pity of the Swiss mountaineers when shown a handsome Englishman: "What a pity he has no goitre!" The future historian will regard the detachment of the Puritans without aristocracy the supreme fortune of the colony; as great a gain to mankind as the opening of this continent.

¶ There is a little formula, couched in pure Saxon, which you may hear in the corners of streets and in the yard of the dame's school, from very little republicans: "I'm as good as you be," which contains the essence of the Massachusetts Bill of Rights and of the American Declaration of Independence. And this was at the bottom of Plymouth Rock and of Boston Stone; and this could be heard (by an acute ear) in the Petitions to the King, and the platforms of churches, and was said and rung in every tone of the psalmody of the Puritans; in every note of Old Hundred and Hallelujah and Short Particular Metre.

¶ What is very conspicuous is the saucy independence which shines in all their eyes. They could say to themselves, Well, at least this yoke of man, of bishops, of courtiers, of dukes, is off my neck. We are a little too close to wolf and famine than that anybody should give himself airs here in the swamp.

¶ London is a long way off, with beadles and pursuivants and horse-guards. Here in the clam-banks and the beech and chestnut forest, I shall take leave to breathe and think freely. If you do not like it, if you molest me, I can cross the brook and plant a new state out of reach of anything but squirrels and wild pigeons.

¶ Bonaparte sighed for his republicans of 1789. The soul of a political party is by no means usually the officers and pets of the party, who wear the honors and fill the high seats and spend the salaries. No, but the theorists and extremists, the men who are never contented and never to be contented with the work actually accomplished, but who from conscience are engaged to what that party professes,—these men will work and watch and rally and never tire in carrying their point. The theology and the instinct of freedom that grew here in the dark in serious men furnished a certain rancor which consumed all opposition, fed the party and carried it, over every rampart and obstacle, to victory.

¶ Boston never wanted a good principle of rebellion in it, from the planting until now; there is always a minor-

ity unconvinced, always a heresiarch, whom the governor and deputies labor with but cannot silence. Some new light, some new doctrinaire who makes an unnecessary ado to establish his dogma; some Wheelwright or defender of Wheelwright; some protester against the cruelty of the magistrates to the Quakers; some tender minister hospitable to Whitfield against the counsel of all the ministers; some John Adams and Josiah Quincy and Governor Andrew to undertake and carry the defence of patriots in the courts against the uproar of all the province; some defender of the slave against the politician and the merchant; some champion of first principles of humanity against the rich and luxurious; some adversary of the death penalty; some pleader for peace; some noble protestant, who will not stoop to infamy when we are gone mad, but will stand for liberty and justice, if alone, until all come back to him.

IT is the property of the religious sentiment to be the most refining of all influences. All else is coarse and external; all else is tailoring and cosmetics beside this; for thoughts are expressed in every look or gesture, and these thoughts are as if angels had talked with the child. By this instinct we are lifted to higher ground.

¶ I confess I do not find in our people, with all their education, a fair share of originality of thought;—not any remarkable book of wisdom; not any broad generalization, any equal power of imagination. No Novum Organon; no Mécanique Céleste; no Principia; no Paradise Lost; no Hamlet; no Wealth of Nations; no National Anthem have we yet contributed.

¶ Nature is a frugal mother and never gives without measure. When she has work to do, she qualifies men for that and sends them equipped for that. In Massachusetts she did not want epic poems and dramas yet, but first, planters of towns, fellers of the forest, builders of mills and forges, builders of roads, and farmers to till and harvest corn for the world. Corn, yes, but honest corn; corn with thanks to the Giver of corn; and the best thanks, namely, obedience to his law; this was the office imposed on our Founders and people; liberty, clean and wise. It was to be built on Religion, the Emancipator; Religion which teaches equality of all men in view of the spirit which created man.

¶ The seed of prosperity was planted. The people did not gather where they had not sown. They did not try to unlock the treasure of the world except by honest keys of labor and skill. They knew, as God knew, that command of Nature comes by obedience to Nature; that reward comes by faithful service; that the most noble motto was that of the Prince of Wales, —"I serve,"—and that he is greatest who serves best. There was no secret of labor which they disdained.

¶ They accepted the divine ordination that man is for use; that intelligent being exists to the utmost use; and that his ruin is to live for pleasure and for show. And when within our memory some flippant senator wished to taunt the people of this country by calling them "the mudsills of society," he paid them ignorantly a true praise; for good men are as the green plain of the earth is, as the rocks, and the beds of rivers are, the foundation and flooring and sills of the state.

¶ The power of labor which belongs to the English race fell here into a climate which befriended it, and into a maritime country made for trade, where was no rival and no envious lawgiver. The sailor and the merchant made the law to suit themselves, so that there was never, I suppose, a more rapid expansion in population, wealth and all

the elements of power, and in the citizens' consciousness of power and sustained assertion of it, than was exhibited here.

¶ Moral values become also money values. When men saw that these people, beside their industry and thrift, had a heart and soul, and would stand by each other at all hazards, they desired to come and live here. A house in Boston was worth as much again as a house just as good in a town of timorous people, because here the neighbors would defend each other against bad governors and against troops; quite naturally house-rents rose in Boston.

¶ Besides, youth and health like a stirring town, above a torpid place where nothing is doing. In Boston they were sure to see something going forward before the year was out. For here was the moving principle itself, the *primum mobile*, a living mind agitating the mass and always afflicting the conservative class with some odious novelty or other; a new religious sect, a political point, a point of honor, a reform in education, a philanthropy.

¶ From Roger Williams and Eliot and Robinson and the Quaker women who for a testimony walked naked into the streets, and as the record tells us "were arrested and publicly whipped,—the baggages that they were;" from Wheelwright the Antinomian, and Ann Hutchinson, and Whitfield, and Mother Ann the first Shaker, down to Abner Kneeland, and Father Lamson, and William Garrison, there never was wanting some thorn of dissent and innovation and heresy to prick the sides of conservatism.

¶ With all their love of his person, they took immense pleasure in turning out the governor and deputy and assistants, and contravening the counsel of the clergy; as they had come so far for the sweet satisfaction of resisting the Bishops and the King.

¶ The Massachusetts colony grew and filled its own borders with a denser population than any other American State (Kossuth called it the City State), all the while sending out colonies to every part of New England; then South and West, until it has infused all the Union with its blood.

¶ We are willing to see our sons emigrate, as to see our hives swarm. That is what they were made to do, and what the land wants and invites. The towns or countries in which the man lives and dies where he was born, and his son and son's son live and die where he did, are of no great account.

¶ I know that this history contains many black lines of cruel injustice; murder, persecution, and execution of women for witchcraft.

¶ I am afraid there are anecdotes of poverty and disease in Broad Street that match the dismal statistics of New York and London. No doubt all manner of vices can be found in this, as in every city; infinite meanness, scarlet crime. Granted. But there is yet in every city a certain permanent tone; a tendency to be in the right or in the wrong; audacity or slowness; labor or luxury; giving or parsimony; which side is it on? And I hold that a community, as a man, is entitled to be judged by his best.

¶ We are often praised for what is least ours. Boston too is sometimes pushed into a theatrical attitude of virtue, to which she is not entitled and which she cannot keep. But the genius of Boston is seen in her real independence, productive power and northern acuteness of mind,—which is in nature hostile to oppression. It is a good city as cities go; Nature is good. The climate is electric, good for wit and good for character. What public souls have lived here, what social benefactors, what eloquent preachers, skilful workmen, stout captains, wise merchants; what fine artists, what gifted conversers, what mathematicians, what lawyers, what wits and where is the middle class so able, virtuous and instructed?

¶ And thus our little city thrives and enlarges, striking deep roots, and sending out boughs and buds, and propagating itself like a banyan over the continent. Greater cities there are that

sprung from it, full of its blood and name and traditions. It is very willing to be outnumbered and outgrown, so long as they carry forward its life of civil and religious freedom, of education, of social order, and of loyalty to law. It is very willing to be outrun in numbers, and in wealth; but it is very jealous of any superiority in these, its natural instinct and privilege. You cannot conquer it by numbers, or by square miles, or by counted millions of wealth. For it owes its existence and its power to principles not of yesterday, and the deeper principle will always prevail over whatever material accumulations.

¶ As long as she cleaves to her liberty, her education and to her spiritual faith as the foundation of these, she will teach the teachers and rule the rulers of America. Her mechanics, her farmers will toil better; she will repair mischief; she will furnish what is wanted in the hour of need; her sailors will man the Constitution; her mechanics repair the broken rail; her troops will be the first in the fields to vindicate the majesty of a free nation, and remain last on the field to secure it. Her genius will write the laws and her historians record the fate of nations.

¶ In an age of trade and material prosperity, we have stood a little stupefied by the elevation of our ancestors. We praised the Puritans because we did not find in ourselves the spirit to do the like. We praised with a certain adulation the invariable valor of the old war-gods and war-councillors of the Revolution. Washington has seemed an exceptional virtue. This praise was a concession of unworthiness in those who had so much to say of it. The heroes only shared this power of a sentiment, which, if it now breathes into us, will make it easy to us to understand them, and we shall not longer flatter them. Let us shame the fathers, by superior virtue in the sons.

¶ It is almost a proverb that a great man has not a great son. Bacon, Newton and Washington were childless. But, in Boston, Nature is more indulgent, and has given good sons to good sires, or at least continued merit in the same blood. The elder President Adams has to divide voices of fame with the younger President Adams. The elder Otis could hardly excel the popular eloquence of the younger Otis; and the Quincy of the Revolution seems compensated for the shortness of his bright career in the son who so long lingers among the last of those bright clouds,

> "That on the steady breeze of honor sail
> In long succession calm and beautiful."

HERE stands to-day, as of yore, our little city of the rocks; here let it stand forever, on the man-bearing granite of the North! She has grown great. Let every child that is born of her and every child of her adoption see to it to keep the name of Boston as clean as the sun.

¶ Here stands to-day, as of yore, our little city of the rocks; here let it stand forever, on the man-bearing granite of the North! Let her stand fast by herself! She has grown great. She is filled with strangers, but she can only prosper by adhering to her faith. Let every child that is born of her and every child of her adoption see to it to keep the name of Boston as clean as the sun; and in distant ages her motto shall be the prayer of millions on all the hills that gird the town, "As with our Fathers, so God be with us!" SICUT PATRIBUS, SIT DEUS NOBIS!

MICHAEL ANGELO

FEW lives of eminent men are harmonious; few that furnish, in all the facts, an image corresponding with their fame. But all things recorded of Michael Angelo Buonarotti agree together. He lived one life; he pursued one career. He accomplished extraordinary works; he uttered extraordinary words; and in this greatness was so little eccentricity, so true was he to the laws of the human mind, that his character and his works, like Sir Isaac Newton's, seem rather a part of Nature than arbitrary productions of the human will. Especially we venerate his moral fame. Whilst his name belongs to the highest class of genius, his life contains in it no injurious influence. Every line in his biography might be read to the human race with wholesome effect. The means, the materials of his activity, were coarse enough to be appreciated, being addressed for the most part to the eye; the results, sublime and all innocent. A purity severe and even terrible goes out from the lofty productions of his pencil and his chisel, and again from the more perfect sculpture of his own life, which heals and exalts. "He nothing common did, or mean," and, dying at the end of near ninety years, had not yet become old, but was engaged in executing his grand conceptions in the ineffaceable architecture of Saint Peter's.

¶ Above all men whose history we know, Michael Angelo presents us with the perfect image of the artist. He is an eminent master in the four fine arts, Painting, Sculpture, Architecture and Poetry. In three of them by visible means, and in poetry by words, he strove to express the Idea of Beauty. This idea possessed him and determined all his activity. Beauty in the largest sense, beauty inward and outward, comprehending grandeur as a part, and reaching to goodness as its soul,—this to receive and this to impart, was his genius.

¶ It is a happiness to find, amid the falsehood and griefs of the human race, a soul at intervals born to behold and create only Beauty. So shall not the indescribable charm of the natural world, the great spectacle of morn and evening which shut and open the most disastrous day, want observers. The ancient Greeks called the world *κόσμος, Beauty;* a name which, in our artificial state of society, sounds fanciful and impertinent. Yet, in proportion as man rises above the servitude to wealth and a pursuit of mean pleasures, he perceives that what is most real is most beautiful, and that, by the contemplation of such objects, he is taught and exalted. This truth, that perfect beauty and perfect goodness are one, was made known to Michael Angelo; and we shall endeavor by sketches from his life to show the direction and limitations of his search after this element.

¶ In considering a life dedicated to the study of Beauty, it is natural to inquire, what is Beauty? Can this charming element be so abstracted by the human mind as to become a distinct and permanent object? Beauty cannot be defined. Like Truth, it is an ultimate aim of the human being. It does not lie within the limits of the understanding. "The nature of the beautiful"—we gladly borrow the language of Moritz, a German critic—"consists herein, that because the understanding in the presence of the beautiful cannot ask, 'Why is it beautiful?' for that reason is it so. There is no standard whereby the understanding can determine whether objects are beautiful or otherwise. What other standard of the beautiful exists than the entire circuit of all harmonious proportions of the great system of Nature? All particular beauties scattered up and down in Nature are only so far beautiful as they suggest more or less in themselves this entire circuit of harmonious proportions." This great Whole the understanding cannot embrace. Beauty may be felt. It may be

produced. But it cannot be defined.

¶ The Italian artists sanction this view of Beauty by describing it as *il più nell' uno*, "the many in one," or multitude in unity, intimating that what is truly beautiful seems related to all Nature. A beautiful person has a kind of universality, and appears to have truer conformity to all pleasing objects in external Nature than another. Every great work of art seems to take up into itself the excellencies of all works, and to present, as it were, a miniature of Nature.

¶ In relation to this element of Beauty, the minds of men divide themselves into two classes. In the first place, all men have an organization corresponding more or less to the entire system of Nature, and therefore a power of deriving pleasure from Beauty. This is Taste. In the second place, certain minds, more closely harmonized with Nature, possess the power of abstracting Beauty from things, and reproducing it in new forms, on any object to which accident may determine their activity; as stone, canvas, song, history. This is Art.

¶ Since Beauty is thus an abstraction of the harmony and proportion that reigns in all Nature, it is therefore studied in Nature, and not in what does not exist. Hence the celebrated French maxim of Rhetoric, *Rien de beau que le vrai;* "Nothing is beautiful but what is true." It has a much wider application than to Rhetoric; as wide, namely, as the terms of the proposition admit. In art, Michael Angelo is himself but a document or verification of this maxim. He labored to express the beautiful, in the entire conviction that it was only to be attained unto by knowledge of the true. The common eye is satisfied with the surface on which it rests. The wise eye knows that it is surface, and, if beautiful, only the result of interior harmonies, which, to him who knows them, compose the image of higher beauty. Moreover, he knew well that only by an understanding of the internal mechanism can the outside be faithfully delineated. The walls of houses are transparent to the architect. The symptoms disclose the constitution to the physician; and to the artist it belongs by a better knowledge of anatomy, and, within anatomy, of life and thought, to acquire the power of true drawing. "The human form," says Goethe, "cannot be comprehended through seeing its surface. It must be stripped of the muscles, its parts separated, its joints observed, its divisions marked, its action and counteraction learned; the hidden, the reposing, the foundation of the apparent, must be searched, if one would really see and imitate what moves as a beautiful, inseparable whole in living waves before the eye." Michael Angelo dedicated himself, from his childhood to his death, to a toilsome observation of Nature. The first anecdote recorded of him shows him to be already on the right road. Granacci, a painter's apprentice, having lent him, when a boy, a print of Saint Antony beaten by devils, together with some colors and pencils, he went to the fish-market to observe the form and color of fins and of the eyes of fish. Cardinal Farnese one day found him, when an old man, walking alone in the Coliseum, and expressed his surprise at finding him solitary amidst the ruins; to which he replied, "I go yet to school that I may continue to learn." And one of the last drawings in his

EVERY line in his biography might be read to the human race with wholesome effect. A purity severe and even terrible goes out from the lofty productions of his pencil and his chisel, and again from the more perfect sculpture of his own life, which heals and exalts.

portfolio is a sublime hint of his own feeling; for it is a sketch of an old man with a long beard, in a go-cart, with an hour-glass before him; and the motto, *Ancora imparo*, "I still learn."

¶ In this spirit he devoted himself to the study of anatomy for twelve years; we ought to say, rather, as long as he lived. The depth of his knowledge in anatomy has no parallel among the artists of modern times. Most of his designs, his contemporaries inform us, were made with a pen, and in the style of an engraving on copper or wood; a manner more expressive but not admitting of correction. When Michael Angelo would begin a statue, he made first on paper the *skeleton;* afterwards, upon another paper, the same figure clothed with muscles. The studies of the statue of Christ in the Church of Minerva at Rome, made in this manner, were long preserved.

¶ Those who have never given attention to the arts of design are surprised that the artist should find so much to study in a fabric of such limited parts and dimensions as the human body. But reflection discloses evermore a closer analogy between the finite form and the infinite inhabitant. Man is the highest, and indeed the only proper object of plastic art. There needs no better proof of our instinctive feeling of the immense expression of which the human figure is capable than the uniform tendency which the religion of every country has betrayed towards Anthropomorphism, or attributing to the Deity the human form. And behold the effect of this familiar object every day! No acquaintance with the secrets of its mechanism, no degrading views of human nature, not the most swinish compost of mud and blood that was ever misnamed philosophy, can avail to hinder us from doing involuntary reverence to any exhibition of majesty or surpassing beauty in human clay.

¶ Our knowledge of its highest expression we owe to the Fine Arts. Not easily in this age will any man acquire by himself such perceptions of the dignity or grace of the human frame as the student of art owes to the remains of Phidias, to the Apollo, the Jove, the paintings and statues of Michael Angelo, and the works of Canova. There are now in Italy, both on canvas and in marble, forms and faces which the imagination is enriched by contemplating. Goethe says that he is but half himself who has never seen the Juno in the Rondanini Palace at Rome. Seeing these works true to human nature and yet superhuman, "we feel that we are greater than we know." Seeing these works, we appreciate the taste which led Michael Angelo, against the taste and against the admonition of his patrons, to cover the walls of churches with unclothed figures, "improper," says his biographer, "for the place, but proper for the exhibition of all the pomp of his profound knowledge."

¶ The love of beauty which never passes beyond outline and color was too slight an object to occupy the powers of his genius. There is a closer relation than is commonly thought between the fine arts and the useful arts; and it is an essential fact in the history of Michael Angelo that his love of beauty is made solid and perfect by his deep understanding of the mechanic arts. Architecture is the bond that unites the elegant and the economical arts, and his skill in this is a pledge of his capacity in both kinds. His Titanic handwriting in marble and travertine is to be found in every part of Rome and Florence; and even at Venice, on defective evidence, he is said to have given the plan of the bridge of the Rialto. Nor was his a skill in ornament, or confined to the outline and designs of towers and façades, but a thorough acquaintance with all the secrets of the art, with all the details of economy and strength.

¶ When the Florentines united themselves with Venice, England and France, to oppose the power of the Emperor Charles V., Michael Angelo was appointed Military Architect and Engineer, to superintend the erection of the necessary works. He visited Bologna to inspect its celebrated fortifications, and, on his return, constructed a fortifica-

tion on the heights of San Miniato, which commands the city and environs of Florence. On the 24th of October, 1529, the Prince of Orange, general of Charles V., encamped on the hills surrounding the city, and his first operation was to throw up a rampart to storm the bastion of San Miniato. His design was frustrated by the providence of Michael Angelo. Michael made such good resistance that the Prince directed the artillery to demolish the tower. The artist hung mattresses of wool on the side exposed to the attack, and by means of a bold projecting cornice, from which they were suspended, a considerable space was left between them and the wall. This simple expedient was sufficient, and the Prince was obliged to turn his siege into a blockade.

BEAUTY may be felt. It may be PRODUCED. But it cannot be DEFINED.

¶ After an active and successful service to the city for six months, Michael Angelo was informed of a treachery that was ripening within the walls. He communicated it to the government with his advice upon it; but was mortified by receiving from the government reproaches at his credulity and fear. He replied that "it was useless for him to take care of the walls, if they were determined not to take care of themselves," and he withdrew privately from the city to Ferrara, and thence to Venice. The news of his departure occasioned a general concern in Florence, and he was instantly followed with apologies and importunities to return. He did so, and resumed his office. On the 21st of March, 1530, the Prince of Orange assaulted the city by storm. Michael Angelo is represented as having ordered his defence so vigorously that the Prince was compelled to retire. By the treachery, however, of the general of the Republic, Malatesta Baglioni, all his skill was rendered unavailing, and the city capitulated on the 9th of August. The excellence of the works constructed by our artist has been approved by Vauban, who visited them and took a plan of them.

¶ In Rome, Michael Angelo was consulted by Pope Paul III. in building the fortifications of San Borgo. He built the stairs of Ara Celi leading to the church once the temple of Jupiter Capitolinus; he arranged the piazza of the Capitol, and built its porticos. He was charged with rebuilding the Pons Palatinus over the Tiber. He prepared, accordingly, a large quantity of blocks of travertine, and was proceeding with the work, when, through the intervention of his rivals, this work was taken from him and intrusted to Nanni di Bacio Bigio, who plays but a pitiful part in Michael's history. Nanni sold the travertine, and filled up the piers with gravel at a small expense. Michael Angelo made known his opinion that the bridge could not resist the force of the current; and one day riding over it on horseback, with his friend Vasari, he cried, "George, this bridge trembles under us; let us ride faster lest it fall whilst we are upon it." It fell, five years after it was built, in 1557, and is still called the "Broken Bridge."

¶ Versatility of talent in men of undoubted ability always awakens the liveliest interest; and we observe with delight that, besides the sublimity and even extravagance of Michael Angelo, he possessed an unexpected dexterity in minute mechanical contrivances. When the Sistine Chapel was prepared for him, that he might paint the ceiling, he found the platform on which he was to

work suspended by ropes which passed through the ceiling. Michael demanded of San Gallo, the pope's architect, how these holes were to be repaired in the picture. San Gallo replied: "That was for him to consider, for the platform could be constructed in no other way." Michael removed the whole, and constructed a movable platform to rest and roll upon the floor, which is believed to be the same simple contrivance which is used in Rome, at this day, to repair the walls of churches. He gave this model to a carpenter, who made it so profitable as to furnish a dowry for his two daughters. He was so nice in tools that he made with his own hand the wimbles, the files, the rasps, the chisels and all other irons and instruments which he needed in sculpture; and in painting, he not only mixed but ground his colors himself, trusting no one.

¶ And not only was this discoverer of Beauty, and its teacher among men, rooted and grounded in those severe laws of practical skill, which genius can never teach, and which must be learned by practice alone, but he was one of the most industrious men that ever lived. His diligence was so great that it is wonderful how he endured its fatigues. The midnight battles, the forced marches, the winter campaigns of Julius Cæsar or Charles XII. do not indicate greater strength of body or of mind. He finished the gigantic painting of the ceiling of the Sistine Chapel in twenty months, a fact which enlarges, it has been said, the known powers of man. Indeed he toiled so assiduously at this painful work, that, for a long time after, he was unable to see any picture but by holding it over his head. A little bread and wine was all his nourishment; and he told Vasari that he often slept in his clothes, both because he was too weary to undress, and because he would rise in the night and go immediately to work. "I have found," says his friend, "some of his designs in Florence, where, whilst may be seen the greatness of his genius, it may also be known that when he wished to take Minerva from the head of Jove, there needed the hammer of Vulcan." He used to make to a single figure nine, ten, or twelve heads before he could satisfy himself, seeking that there should be in the composition a certain universal grace such as Nature makes, saying that "he needed to have his compasses in his eye, and not in his hand, because the hands work whilst the eye judges." He was accustomed to say, "Those figures alone are good from which the labor is scraped off when the scaffolding is taken away."

¶ At near eighty years, he began in marble a group of four figures for a dead Christ, because, he said, to exercise himself with the mallet was good for his health.

¶ And what did he accomplish? It does not fall within our design to give an account of his works, yet for the sake of the completeness of our sketch we will name the principal ones. Sculpture, he called *his* art, and to it he regretted he had not singly given himself. The style of his paintings is monumental; and even his poetry partakes of that character. In sculpture, his greatest work is the statue of Moses in the Church of Pietro in Vincolo, in Rome. It is a sitting statue of colossal size, and is designed to embody the Hebrew Law. The lawgiver is supposed to gaze upon the worshippers of the golden calf. The majestic wrath of the figure daunts the beholder. In the Piazza del Gran Duca at Florence, stands, in the open air, his David, about to hurl the stone at Goliath. In the church called the Minerva, at Rome, is his Christ; an object of so much devotion to the people that the right foot has been shod with a brazen sandal to prevent it from being kissed away. In Saint Peter's, is his Pietà, or dead Christ in the arms of his mother. In the mausoleum of the Medici at Florence are the tombs of Lorenzo and Cosmo, with the grand statues of Night and Day, and Aurora and Twilight. Several statues of less fame, and bas-reliefs, are in Rome and Florence and Paris.

¶ His paintings are in the Sistine Chapel, of which he first covered the ceiling with the story of the Creation, in suc-

cessive compartments, with the great series of the Prophets and Sibyls in alternate tablets, and a series of greater and smaller fancy pieces in the lunettes. This is his capital work painted in fresco. Every one of these pieces, every figure, every hand and foot and finger, is a study of anatomy and design. Slighting the secondary arts of coloring, and all the aids of graceful finish, he aimed exclusively, as a stern designer, to express the vigor and magnificence of his conceptions. Upon the wall, over the altar, is painted the Last Judgment.

¶ Of his designs, the most celebrated is the cartoon representing soldiers coming out of the bath and arming themselves; an incident of the war of Pisa. The wonderful merit of this drawing, which contrasts the extremes of relaxation and vigor, is conspicuous even in the coarsest prints.

¶ Of his genius for architecture it is sufficient to say that he built Saint Peter's, an ornament of the earth. He said he would hang the Pantheon in the air; and he redeemed his pledge by suspending that vast cupola, without offence to grace or to stability, over the astonished beholder. He did not live to complete the work; but is there not something affecting in the spectacle of an old man, on the verge of ninety years, carrying steadily onward, with the heat and determination of manhood, his poetic conceptions into progressive execution, surmounting by the dignity of his purposes all obstacles and all enmities, and only hindered by the limits of life from fulfilling his designs? Very slowly came he, after months and years, to the dome. At last he began to model it very small in wax. When it was finished, he had it copied larger in wood, and by this model it was built. Long after it was completed, and often since, to this day, rumors are occasionally spread that it is giving way, and it is said to have been injured by unskilful attempts to repair it. Benedict XIV., during one of these panics, sent for the architect Marchese Polini, to come to Rome and examine it. Polini put an end to all the various projects of repairs, by the satisfying sentence: "The cupola does not start, and if it should start, nothing can be done but to pull it down."

¶ The impulse of his grand style was instantaneous upon his contemporaries. Every stroke of his pencil moved the pencil in Raphael's hand. Raphael said, "I bless God I live in the times of Michael Angelo." Sir Joshua Reynolds, two centuries later, declared to the British Institution, "I feel a self-congratulation in knowing myself capable of such sensations as he intended to excite."

¶ A man of such habits and such deeds made good his pretensions to a perception and to delineation of external beauty. But inimitable as his works are, his whole life confessed that his hand was all inadequate to express his thought. "He alone," he said, "is an artist whose hands can perfectly execute what his mind has conceived;" and such was his own mastery that men said, "the marble was flexible in his hands." Yet, contemplating ever with love the idea of absolute beauty, he was still dissatisfied with his own work. The things proposed to him in his imagination were such that, for not being able with his hands to express so grand and terrible conceptions, he often abandoned his work. For this reason he often only blocked his statue. A little before he died, he burned a great number of designs, sketches and cartoons made by him, being impatient of their defects. Grace in living forms, except in very rare instances, did not satisfy him. He never made but one portrait (a cartoon of Messer Tommaso di Cavalieri), because he abhorred to draw a likeness unless it were of infinite beauty.

¶ Such was his devotion to art. But let no man suppose that the images which his spirit worshipped were mere transcripts of external grace, or that this profound soul was taken or holden in the chains of superficial beauty. To him, of all men, it was transparent. Through it he beheld the eternal spiritual beauty which ever clothes itself with grand and graceful outlines, as its appropriate

form. He called external grace "the frail and weary weed, in which God dresses the soul which he has called into Time." "As from the fire, heat cannot be divided, no more can beauty from the eternal." He was conscious in his efforts of higher aims than to address the eye. He sought, through the eye, to reach the soul. Therefore, as, in the first place, he sought to approach the Beautiful by the study of the True, so he failed not to make the next step of progress, and to seek Beauty in its highest form, that of Goodness. The sublimity of his art is in his life. He did not only build a divine temple, and paint and carve saints and prophets. He lived out the same inspiration. There is no spot upon his fame. The fire and sanctity of his pencil breathe in his words. When he was informed that Paul IV. desired he should paint again the side of the chapel where the Last Judgment was painted, because of the indecorous nudity of the figures, he replied, "Tell the Pope that this is easily done. Let him reform the world and he will find the pictures will reform themselves." He saw clearly that if the corrupt and vulgar eyes that could see nothing but indecorum in his terrific prophets and angels could be purified as his own were pure, they would only find occasion for devotion in the same figures. As he refused to undo his work, Daniel di Volterra was employed to clothe the figures; hence ludicrously called *Il Braghettone*. When the Pope suggested to him that the chapel would be enriched if the figures were ornamented with gold, Michael Angelo replied, "In those days, gold was not worn; and the characters I have painted were neither rich nor desirous of wealth, but holy men, with whom gold was an object of contempt."

ABOVE all men whose history we know, Michael Angelo presents us with the perfect image of the artist. He is an eminent master in the four fine arts, Painting, Sculpture, Architecture and Poetry. In three of them by visible means, and in poetry by words, he strove to express the Idea of Beauty.

¶ Not until he was in the seventy-third year of his age, he undertook the building of Saint Peter's. On the death of San Gallo, the architect of the church, Paul III. first entreated, then commanded the aged artist to assume the charge of this great work, which, though commenced forty years before, was only commenced by Bramante, and ill continued by San Gallo. Michael Angelo, who believed in his own ability as a sculptor, but distrusted his capacity as an architect, at first refused and then reluctantly complied. His heroic stipulation with the Pope was worthy of the man and the work. He required that he should be permitted to accept this work without any fee or reward, because he undertook it as a religious act; and, furthermore, that he should be absolute master of the whole design, free to depart from the plans of San Gallo and to alter what had been already done.

¶ This disinterestedness and spirit—no fee and no interference—reminds one of the reward named by the ancient Persian. When importuned to claim some compensation of the empire for the important services he had rendered it, he demanded "that he and his should neither command nor obey, but should be free." However, as it was undertaken, so was it performed. When the Pope, delighted with one of his chapels, sent him one hundred crowns of gold, as one month's wages, Michael sent them back. The Pope was angry, but the artist was immovable. Amidst endless annoyances from the envy and interest of the office-holders and agents in the work whom he had displaced, he

steadily ripened and executed his vast ideas. The combined desire to fulfil, in everlasting stone, the conceptions of his mind, and to complete his worthy offering to Almighty God, sustained him through numberless vexations with unbroken spirit. In answer to the importunate solicitations of the Duke of Tuscany that he would come to Florence, he replies that "to leave Saint Peter's in the state in which it now was would be to ruin the structure, and thereby be guilty of a great sin;" that he hoped he should shortly see the execution of his plans brought to such a point that they could no longer be interfered with, and this was the capital object of his wishes, "if," he adds, "I do not commit a great crime by disappointing the cormorants who are daily hoping to get rid of me."

ONE of the last drawings in his portfolio is a sublime hint; for it is a sketch of an old man with a long beard, in a go-cart, with an hour-glass before him; and the motto, Ancora imparo, *"I still learn."*

¶ A natural fruit of the nobility of his spirit is his admiration of Dante, to whom two of his sonnets are addressed. He shared Dante's "deep contempt of the vulgar, not of the simple inhabitants of lowly streets or humble cottages, but of that sordid and abject crowd of all classes and all places who obscure, as much as in them lies, every beam of beauty in the universe." In like manner, he possessed an intense love of solitude. He lived alone, and never or very rarely took his meals with any person. As will be supposed, he had a passion for the country, and in old age speaks with extreme pleasure of his residence with the hermits in the mountains of Spoleto; so much so that he says he is "only half in Rome, since, truly, peace is only to be found in the woods." Traits of an almost savage independence mark all his history. Although he was rich, he lived like a poor man, and never would receive a present from any person; because it seemed to him that if a man gave him anything, he was always obligated to that individual. His friend Vasari mentions one occasion on which his scruples were overcome. It seems that Michael was accustomed to work at night with a pasteboard cap or helmet on his head, into which he stuck a candle, that his work might be lighted and his hands at liberty. Vasari observed that he did not use wax candles, but a better sort made of the tallow of goats. He therefore sent him four bundles of them, containing forty pounds. His servant brought them after nightfall, and presented them to him. Michael Angelo refused to receive them. "Look you, Messer Michael Angelo," replied the man, "these candles have well-nigh broken my arm, and I will not carry them back; but just here, before your door, is a spot of soft mud, and they will stand upright in it very well, and there I will light them all." "Put them down, then," returned Michael, "since you shall not make a bonfire at my gate." Meantime he was liberal to profusion to his old domestic Urbino, to whom he gave at one time two thousand crowns, and made him rich in his service.

¶ Michael Angelo was of that class of men who are too superior to the multitude around them to command a full and perfect sympathy. They stand in the attitude rather of appeal from their contemporaries to their race. It has been the defect of some great men that they did not duly appreciate or did not confess the talents and virtues of others, and so lacked one of the richest sources of happiness and one of the best elements of humanity. This apathy per-

haps happens as often form preoccupied attention as from jealousy. It has been supposed that artists more than others are liable to this defect. But Michael Angelo's praise on many works is to this day the stamp of fame. Michael Angelo said of Masaccio's pictures that when they were first painted they must have been alive. He said of his predecessor, the architect Bramante, that he laid the first stone of Saint Peter's, clear, insulated, luminous, with fit design for a vast structure. He often expressed his admiration of Cellini's bust of Altoviti. He loved to express admiration of Titian, of Donatello, of Ghiberti, of Brunelleschi. And it is said that when he left Florence to go to Rome, to build Saint Peter's, he turned his horse's head on the last hill from which the noble dome of the cathedral (built by Brunelleschi) is visible, and said, "Like you, I will not build; better than you I cannot." Indeed, as we have said, the reputation of many works of art now in Italy derives a sanction from the tradition of his praise. It is more commendation to say, "This was Michael Angelo's favorite," than to say, "This was carried to Paris by Napoleon." Michael, however, had the philosophy to say, "Only an inventor can use the inventions of others."

¶ There is yet one more trait in Michael Angelo's history, which humanizes his character without lessening its loftiness; this is his platonic love. He was deeply enamoured of the most accomplished lady of the time, Vittoria Colonna, the widow of the Marquis di Pescara, who, after the death of her husband, devoted herself to letters, and to the writing of religious poetry. She was also an admirer of his genius, and came to Rome repeatedly to see him. To her his sonnets are addressed; and they all breathe a chaste and divine regard, unparalleled in any amatory poetry except that of Dante and Petrarch. They are founded on the thought that beauty is the virtue of the body, as virtue is the beauty of the soul; that a beautiful person is sent into the world as an image of the divine beauty, not to provoke but to purify the sensual into an intellectual and divine love. He enthrones his mistress as a benignant angel, who is to refine and perfect his own character. Condivi, his friend, has left this testimony: "I have often heard Michael Angelo reason and discourse upon love, but never heard him speak otherwise than upon platonic love. As for me, I am ignorant what Plato has said upon this subject; but this I know very well, that, in a long intimacy, I never heard from his mouth a single word that was not perfectly decorous and having for its object to extinguish in youth every improper desire, and that his own nature is a stranger to depravity." The poems themselves cannot be read without awakening sentiments of virtue. An eloquent vindication of their philosophy may be found in a paper by Signor Radici in the London Retrospective Review, and, by the Italian scholar, in the Discourse of Benedetto Varchi upon one sonnet of Michael Angelo, contained in the volume of his poems published by Biagioli, from which, in substance, the views of Radici are taken.

¶ Towards his end, there seems to have grown in him an invincible appetite of dying, for he knew that his spirit could only enjoy contentment after death. So vehement was this desire that, he says, "my soul can no longer be appeased by the wonted seductions of painting and sculpture." A fine melancholy, not unrelieved by his habitual heroism, pervades his thoughts on this subject. At the age of eighty years, he wrote to Vasari, sending him various spiritual sonnets he had written, and tells him he "is at the end of his life, that he is careful where he bends his thoughts, that he sees it is already twenty-four o'clock, and no fancy arose in his mind but DEATH was sculptured on it." In conversing upon this subject with one of his friends, that person remarked that Michael might well grieve that one who was incessant in his creative labors should have no restoration. "No," replied Michael, "it is nothing; for if life pleases us, death, being a work of the

same master, ought not to displease us." But a nobler sentiment, uttered by him, is contained in his reply to a letter of Vasari, who had informed him of the rejoicings made at the house of his nephew Lionardo, at Florence, over the birth of another Buonarotti. Michael admonishes him that "a man ought not to smile, when all those around him weep; and that we ought not to show that joy when a child is born, which should be reserved for the death of one who has lived well."

¶ Amidst all these witnesses to his independence, his generosity, his purity and his devotion, are we not authorized to say that this man was penetrated with the love of the highest beauty, that is, goodness; that his was a soul so enamoured of grace that it could not stoop to meanness or depravity; that art was to him no means of livelihood or road to fame, but the end of living, as it was the organ through which he sought to suggest lessons of an unutterable wisdom; that here was a man who lived to demonstrate that to the human faculties, on every hand, worlds of grandeur and grace are opened, which no profane eye and no indolent eye can behold, but which, to see and to enjoy, demands the severest discipline of all the physical, intellectual and moral faculties of the individual?

¶ The city of Florence, on the river Arno, still treasures the fame of this man. There, his picture hangs in every window; there, the tradition of his opinions meets the traveller in every spot. "Do you see that statue of Saint George? Michael Angelo asked it why it did not speak."—"Do you see this fine church of Santa Maria Novella? It is that which Michael Angelo called 'his bride.'"—"Look at these bronze gates of the Baptistery, with their high reliefs, cast by Ghiberti five hundred years ago. Michael Angelo said, 'they were fit to be the gates of Paradise.'" Here is the church, the palace, the Laurentian library, he built. Here is his own house. In the church of Santa Croce are his mortal remains. Whilst he was yet alive, he asked that he might be buried in that church, in such a spot that the dome of the cathedral might be visible from his tomb when the doors of the church stood open. And there and so is he laid. The innumerable pilgrims whom the genius of Italy draws to the city duly visit this church, which is to Florence what Westminster Abbey is to England. There, near the tomb of Nicholas Macchiavelli, the historian and philosopher; of Galileo, the great-hearted astronomer; of Boccaccio, and of Alfieri, stands the monument of Michael Angelo Buonarotti. Three significant garlands are sculptured on the tomb; they should be four, but that his countrymen feared their own partiality. The forehead of the bust, esteemed a faithful likeness, is furrowed with eight deep wrinkles one above another. The traveller from a distant continent, who gazes on that marble brow, feels that he is not a stranger in the foreign church; for the great name of Michael Angelo sounds hospitably in his ear. He was not a citizen of any country; he belonged to the human race; he was a brother and a friend to all who acknowledge the beauty that beams in universal Nature, and who seek by labor and self-denial to approach its source in perfect goodness.

THE great name of Michael Angelo sounds hospitably in the ear. He was not a citizen of any country; he belonged to the human race; he was a brother and a friend to all who acknowledge the beauty that beams in universal Nature, and who seek by labor and self-denial to approach its source in perfect goodness.

MILTON

THE discovery of the lost work of Milton, the treatise Of the Christian Doctrine, in 1823, drew a sudden attention to his name. For a short time the literary journals were filled with disquisitions on his genius; new editions of his works, and new compilations of his life, were published. But the new-found book having in itself less attraction than any other work of Milton, the curiosity of the public as quickly subsided, and left the poet to the enjoyment of his permanent fame, or to such increase or abatement of it only as is incidental to a sublime genius, quite independent of the momentary challenge of universal attention to his claims.

¶ But if the new and temporary renown of the poet is silent again, it is nevertheless true that he has gained, in this age, some increase of permanent praise. The fame of a great man is not rigid and stony like his bust. It changes with time. It needs time to give it due perspective. It was very easy to remark an altered tone in the criticism when Milton reappeared as an author, fifteen years ago, from any that had been bestowed on the same subject before. It implied merit indisputable and illustrious; yet so near to the modern mind as to be still alive and life-giving. The aspect of Milton, to this generation, will be part of the history of the nineteenth century. There is no name in English literature between his age and ours that rises into any approach to his own. And as a man's fame, of course, characterizes those who give it, as much as him who receives it, the new criticism indicated a change in the public taste, and a change which the poet himself might claim to have wrought.

¶ The reputation of Milton had already undergone one or two revolutions long anterior to its recent aspects. In his lifetime, he was little or not at all known as a poet, but obtained great respect from his contemporaries as an accomplished scholar and a formidable pamphleteer. His poem fell unregarded among his countrymen. His prose writings, especially the Defence of the English People, seem to have been read with avidity. These tracts are remarkable compositions. They are earnest, spiritual, rich with allusion, sparkling with innumerable ornaments; but as writings designed to gain a practical point, they fail. They are not effective, like similar productions of Swift and Burke; or, like what became also controversial tracts, several masterly speeches in the history of the American Congress. Milton seldom deigns a glance at the obstacles that are to be overcome before that which he proposes can be done. There is no attempt to conciliate,—no mediate, no preparatory course suggested,—but, peremptory and impassioned, he demands, on the instant, an ideal justice. Therein they are discriminated from modern writings, in which a regard to the actual is all but universal.

¶ Their rhetorical excellence must also suffer some deduction. They have no perfectness. These writings are wonderful for the truth, the learning, the subtility and pomp of the language; but the whole is sacrificed to the particular. Eager to do fit justice to each thought, he does not subordinate it so as to project the main argument. He writes whilst he is heated; the piece shows all the rambles and resources of indignation, but he has never *integrated* the parts of the argument in his mind. The reader is fatigued with admiration, but is not yet master of the subject.

¶ Two of his pieces may be excepted from this description, one for its faults, the other for its excellence. The Defence of the People of England, on which his contemporary fame was founded, is, when divested of its pure Latinity, the worst of his works. Only its general aim, and a few elevated passages, can save it. We could be well content if the flames to which it was condemned at

Paris, at Toulouse, and at London, had utterly consumed it. The lover of his genius will always regret that he should not have taken counsel of his own lofty heart at this, as at other times, and have written from the deep convictions of love and right, which are the foundations of civil liberty. There is little poetry or prophecy in this mean and ribald scolding. To insult Salmasius, not to acquit England, is the main design. What under heaven had Madame de Saumaise, or the manner of living of Saumaise, or Salmasius, or his blunders of grammar, or his niceties of diction, to do with the solemn question whether Charles Stuart had been rightly slain? Though it evinces learning and critical skill, yet, as an historical argument, it cannot be valued with similar disquisitions of Robertson and Hallam, and even less celebrated scholars. But when he comes to speak of the reason of the thing, then he always recovers himself. The voice of the mob is silent, and Milton speaks. And the peroration, in which he implores his countrymen to refute this adversary by their great deeds, is in a just spirit. The other piece is his Areopagitica, the discourse, addressed to the Parliament, in favor of removing the censorship of the press; the most splendid of his prose works. It is, as Luther said of one of Melancthon's writings, "alive, hath hands and feet,—and not like Erasmus's sentences, which were made, not grown." The weight of the thought is equalled by the vivacity of the expression, and it cheers as well as teaches. This tract is far the best known and the most read of all, and is still a magazine of reasons for the freedom of the press. It is valuable in history as an argument addressed to a government to produce a practical end, and plainly presupposes a very peculiar state of society.

¶ But deeply as that peculiar state of society, in which and for which Milton wrote, has engraved itself in the remembrance of the world, it shares the destiny which overtakes everything local and personal in Nature; and the accidental facts on which a battle of principles was fought have already passed, or are fast passing, into oblivion. We have lost all interest in Milton as the redoubted disputant of a sect; but by his own innate worth this man has steadily risen in the world's reverence, and occupies a more imposing place in the mind of men at this hour than ever before.

¶ It is the aspect which he presents to this generation, that alone concerns us. Milton the polemic has lost his popularity long ago; and if we skip the pages of Paradise Lost where "God the Father argues like a school divine," so did the next age to his own. But, we are persuaded, he kindles a love and emulation in us which he did not in foregoing generations. We think we have seen and heard criticism upon the poems, which the bard himself would have more valued than the recorded praise of Dryden, Addison and Johnson, because it came nearer to the mark; was finer and closer appreciation; the praise of intimate knowledge and delight; and, of course, more welcome to the poet than the general and vague acknowledgment of his genius by those able but unsympathizing critics. We think we have heard the recitation of his verses by genius which found in them that which itself would say; recitation which told, in the diamond sharpness of every articulation, that now first was such perception and enjoyment possible; the perception and enjoyment of all his varied rhythm, and his perfect fusion of the classic and the English styles. This is a poet's right; for every masterpiece of art goes on for some ages reconciling the world unto itself, and despotically fashioning the public ear. The opposition to it, always greatest at first, continually decreases and at last ends; and a new race grows up in the taste and spirit of the work, with the utmost advantage for seeing intimately its power and beauty.

¶ But it would be great injustice to Milton to consider him as enjoying merely a critical reputation. It is the prerogative of this great man to stand at this hour foremost of all men in

literary history, and so (shall we not say?) of all men, in the power *to inspire*. Virtue goes out of him into others. Leaving out of view the pretensions of our contemporaries (always an incalculable influence), we think no man can be named whose mind still acts on the cultivated intellect of England and America with an energy comparable to that of Milton. As a poet, Shakspeare undoubtedly transcends, and far surpasses him in his popularity with foreign nations; but Shakspeare is a voice merely; who and what he was that sang, that sings, we know not. Milton stands erect, commanding, still visible as a man among men, and reads the laws of the moral sentiment to the newborn race. There is something pleasing in the affection with which we can regard a man who died a hundred and sixty years ago in the other hemisphere, who, in respect to personal relations, is to us as the wind, yet by an influence purely spiritual makes us jealous for his fame as for that of a near friend. He is identified in the mind with all select and holy images, with the supreme interests of the human race. If hereby we attain any more precision, we proceed to say that we think no man in these later ages, and few men ever, possessed so great a conception of the manly character. Better than any other he has discharged the office of every great man, namely, to raise the idea of Man in the minds of his contemporaries and of posterity,—to draw after Nature a life of man, exhibiting such a composition of grace, of strength and of virtue, as poet had not described nor hero lived. Human nature in these ages is indebted to him for its best portrait. Many philosophers in England, France and Germany have formally dedicated their study to this problem; and we think it impossible to recall one in those countries who communicates the same vibration of hope, of self-reverence, of piety, of delight in beauty, which the name of Milton awakens. Lord Bacon, who has written much and with prodigious ability on this science, shrinks and falters before the absolute and uncourtly Puritan. Bacon's Essays are the portrait of an ambitious and profound calculator,—a great man of the vulgar sort. Of the upper world of man's being they speak few and faint words. The man of Locke is virtuous without enthusiasm, and intelligent without poetry. Addison, Pope, Hume and Johnson, students, with very unlike temper and success, of the same subject, cannot, taken together, make any pretension to the amount or the quality of Milton's inspirations. The man of Lord Chesterfield is unworthy to touch his garment's hem. Franklin's man is a frugal, inoffensive, thrifty citizen, but savors of nothing heroic. The genius of France has not, even in her best days, yet culminated in any one head—not in Rousseau, not in Pascal, not in Fénelon—into such perception of all the attributes of humanity as to entitle it to any rivalry in these lists. In Germany, the greatest writers are still too recent to institute a comparison; and yet we are tempted to say that art and not life seems to be the end of their effort. But the idea of a purer existence than any he saw around him, to be realized in the life and conversation of men, inspired every act and every writing of John Milton. He defined the object of education to be, "to fit a man to perform justly, skilfully and magnanimously all the offices, both private and public, of peace and war." He declared that "he who would aspire to write well hereafter in laudable things, ought himself to be a true poem; that is a composition and pattern of the best and honorablest things, not presuming to sing high praises of heroic men or famous cities, unless he have in himself the experience and the practice of all that which is praiseworthy." Nor is there in literature a more noble outline of a wise external education than that which he drew up, at the age of thirty-six, in his Letter to Samuel Hartlib. The muscles, the nerves and the flesh with which this skeleton is to be filled up and covered exist in his works and must be sought there.

¶ For the delineation of this heroic

image of man, Milton enjoyed singular advantages. Perfections of body and of mind are attributed to him by his biographers, that, if the anecdotes had come down from a greater distance of time, or had not been in part furnished or corroborated by political enemies, would lead us to suspect the portraits were ideal, like the Cyrus of Xenophon, the Telemachus of Fénelon, or the popular traditions of Alfred the Great.

¶ Handsome to a proverb, he was called the lady of his college. Aubrey says, "This harmonical and ingenuous soul dwelt in a beautiful, well-proportioned body." His manners and his carriage did him no injustice. Wood, his political opponent, relates that "his deportment was affable, his gait erect and manly, bespeaking courage and undauntedness." Aubrey adds a sharp trait, that "he pronounced the letter R very hard, a certain sign of satirical genius." He had the senses of a Greek. His eye was quick, and he was accounted an excellent master of his rapier. His ear for music was so acute that he was not only enthusiastic in his love, but a skilful performer himself; and his voice, we are told, was delicately sweet and harmonious. He insists that music shall make a part of a generous education.

¶ With these keen perceptions, he naturally received a love of Nature and a rare susceptibility to impressions from external beauty. In the midst of London, he seems, like the creatures of the field and the forest, to have been tuned in concord with the order of the world; for he believed, his poetic vein only flowed from the autumnal to the vernal equinox; and in his essay on Education, he doubts whether, in the fine days of spring, any study can be accomplished by young men. "In those vernal seasons of the year, when the air is calm and pleasant, it were an injury and sullenness against Nature not to go out and see her riches and partake in her rejoicing with heaven and earth." His sensibility to impressions from beauty needs no proof from his history; it shines through every page. The form and the voice of Leonora Baroni seemed to have captivated him in Rome, and to her he addressed his Italian sonnets and Latin epigrams.

¶ To these endowments it must be added that his address and his conversation were worthy of his fame. His house was resorted to by men of wit, and foreigners came to England, we are told, "to see the Lord Protector and Mr. Milton." In a letter to one of his foreign correspondents, Emeric Bigot, and in reply apparently to some compliment on his powers of conversation, he writes: many have been celebrated for their compositions, whose common conversation and intercourse have betrayed no marks of sublimity or genius. But as far as possible, I aim to show myself equal in thought and speech to what I have written, if I have written anything well."

¶ These endowments received the benefit of a careful and happy discipline. His father's care, seconded by his own endeavor, introduced him to a profound skill in all the treasures of Latin, Greek, Hebrew and Italian tongues; and, to enlarge and enliven his elegant learning, he was sent into Italy, where he beheld the remains of ancient art, and the rival works of Raphael, Michael Angelo and Correggio; where, also, he received social and academical honors from the learned and the great. In Paris, he became acquainted with Grotius; in Florence or Rome, with Galileo; and probably no traveller ever entered that country of history with better right to its hospitality, none upon whom its influences could have fallen more congenially.

¶ Among the advantages of his foreign travel, Milton certainly did not count it the least that it contributed to forge and polish that great weapon of which he acquired such extraordinary mastery,—his power of language. His lore of foreign tongues added daily to his consummate skill in the use of his own. He was a benefactor of the English tongue by showing its capabilities. Very early in life he became conscious that he had more to say to his fellow men than they had fit words to embody. At nineteen

years, in a college exercise, he addresses his native language, saying to it that it would be his choice to leave trifles for a grave argument,—

"Such as may make thee search thy coffers round,
Before thou clothe my fancy in fit sound;
Such where the deep transported mind may soar
Above the wheeling poles, and at Heaven's door
Look in, and see each blissful deity,
How he before the thunderous throne doth lie."

¶ Michael Angelo calls "him alone an artist, whose hands can execute what his mind has conceived." The world, no doubt, contains many of that class of men whom Wordsworth denominates *silent poets*, whose minds teem with images which they want words to clothe. But Milton's mind seems to have no thought or emotion which refused to be recorded. His mastery of his native tongue was more than to use it as well as any other; he cast it into new forms. He uttered in it things unheard before. Not imitating but rivalling Shakspeare, he scattered, in tones of prolonged and delicate melody, his pastoral and romantic fancies; then, soaring into unattempted strains, he made it capable of an unknown majesty, and bent it to express every trait of beauty, every shade of thought; and searched the kennel and jakes as well as the palaces of sound for the harsh discords of his polemic wrath. We may even apply to his performance on the instrument of language, his own description of music:—

"Notes, with many a winding bout
Of linkèd sweetness long drawn out,
With wanton heed and giddy cunning,
The melting voice through mazes running,
Untwisting all the chains that tie
The hidden soul of harmony."

¶ But whilst Milton was conscious of possessing this intellectual voice, penetrating through ages and propelling its melodious undulations forward through the coming world, he knew that this mastery of language was a secondary power, and he respected the mysterious source whence it had its spring; namely, clear conceptions and a devoted heart. "For me," he said, in his Apology for Smectymnuus, "although I cannot say that I am utterly untrained in those rules which best rhetoricians have given, or unacquainted with those examples which the prime authors of eloquence have written in any learned tongue, yet true eloquence I find to be none but the serious and hearty love of truth; and that whose mind soever is fully possessed with a fervent desire to know good things, and with the dearest charity to infuse the knowledge of them into others, when such a man would speak, his words, by what I can express, like so many nimble and airy servitors, trip about him at command, and in well-ordered files, as he would wish, fall aptly into their own places."

¶ But as basis or fountain of his rare physical and intellectual accomplishments, the man Milton was just and devout. He is rightly dear to mankind, because in him, among so many perverse and partial men of genius,—in him humanity rights itself; the old eternal goodness finds a home in his breast, and for once shows itself beautiful. His gifts are subordinated to his moral sentiments; and his virtues are so graceful that they seem rather talents than labors. Among so many contrivances as the world has seen to make holiness ugly, in Milton at least it was so pure a flame that the foremost impression his character makes is that of elegance. The victories of the conscience in him are gained by the commanding charm which all the severe and restrictive virtues have for him. His virtues remind us of what Plutarch said of Timoleon's victories, that they resembled Homer's verses, they ran so easy and natural. His habits of living were austere. He was abstemious in diet, chaste, an early riser, and industrious. He tells us, in a Latin poem, that the lyrist may indulge in wine and in a freer life; but that he who would write an epic to the nations must eat beans and drink water. Yet in his severity is no grimace or effort. He serves from love, not from fear. He is innocent and exact, because his taste was so pure and delicate. He acknowledges to his friend Diodati, at the age of twenty-one, that

he is enamoured, if ever any was, of moral perfection: "For whatever the Deity may have bestowed upon me in other respects, he has certainly inspired me, if any ever were inspired, with a passion for the good and fair. Nor did Ceres, according to the fable, ever seek her daughter Prosperine with such unceasing solicitude as I have sought this τοῦ καλοῦ ἰδέαν, this perfect model of the beautiful in all forms and appearances of things."

¶ When he was charged with loose habits of living, he declares that "a certain niceness of nature, an honest haughtiness and self-esteem either of what I was or what I might be, and a modesty, kept me still above those low descents of mind beneath which he must deject and plunge himself that can agree" to such degradation. "His mind gave him," he said, "that every free and gentle spirit, without that oath of chastity, ought to be born a knight; nor needed to expect the gilt spur, or the laying of a sword upon his shoulder, to stir him up, by his counsel and his arm, to secure and protect" attempted innocence.

¶ He states these things, he says, "to show that though Christianity had been but slightly taught him, yet a certain reservedness of natural disposition and moral discipline, learned out of the noblest philosophy, was enough to keep him in disdain of far less incontinences than these" that had been charged on him. In like spirit, he replies to the suspicious calumny respecting his morning haunts. "Those morning haunts are where they should be, at home; not sleeping, or concocting the surfeits of an irregular feast, but up and stirring, in winter, often ere the sound of any bell awake men to labor or devotion; in summer, as oft with the bird that first rouses, or not much tardier, to read good authors, or cause them to be read, till the attention be weary, or memory have its perfect fraught; then with useful and generous labors preserving the body's health and hardiness, to render lightsome, clear and not lumpish obedience to the mind, to the cause of religion and our country's liberty, when it shall require firm hearts in sound bodies to stand and cover their stations. These are the morning practices." This native honor never forsook him. It is the spirit of Comus, the loftiest song in the praise of chastity that is in any language. It always sparkles in his eyes. It breathed itself over his decent form. It refined his amusements, which consisted in gardening, in exercise with the sword and in playing on the organ. It engaged his interest in chivalry, in courtesy, in whatsoever savored of generosity and nobleness. This magnanimity shines in all his life. He accepts a high impulse at every risk, and deliberately undertakes the defence of the English people, when advised by his physicians that he does it at the cost of sight. There is a forbearance even in his polemics. He opens the war and strikes the first blow. When he had cut down his opponents, he left the details of death and plunder to meaner partisans. He said, "he had learned the prudence of the Roman soldier, not to stand breaking of legs, when the breath was quite out of the body."

THE man Milton is rightly dear to mankind, in him humanity rights itself; the old eternal goodness finds a home in his breast, and for once shows itself beautiful.

¶ To this antique heroism, Milton added the genius of the Christian sanctity. Few men could be cited who have so well understood what is peculiar in the Christian ethics, and the precise aid it has brought to men, in being an emphatic affirmation of the omnipotence of

spiritual laws, and, by way of marking the contrast to vulgar opinions, laying its chief stress on humility. The indifferency of a wise mind to what is called high and low, and the fact that true greatness is a perfect humility, are revelations of Christianity which Milton well understood. They give an inexhaustible truth to all his compositions. His firm grasp of this truth is his weapon against the prelates. He celebrates in the martyrs "the unresistible might of weakness." He told the bishops that "instead of showing the reason of their lowly condition from divine example and command, they seek to prove their high preëminence from human consent and authority." He advises that in country places, rather than to trudge many miles to a church, public worship be maintained nearer home, as in a house or barn. "For notwithstanding the gaudy superstition of some still devoted ignorantly to temples, we may be well assured that he who disdained not to be born in a manger disdains not to be preached in a barn." And the following passage, in the Reason of Church Government, indicates his own perception of the doctrine of humility. "Albeit I must confess to be half in doubt whether I should bring it forth or no, it being so contrary to the eye of the world, that I shall endanger either not to be regarded, or not to be understood. For who is there, almost, that measures wisdom by simplicity, strength by suffering, dignity by lowliness?" Obeying this sentiment, Milton deserved the apostrophe of Wordsworth:—

> "Pure as the naked heavens, majestic, free,
> So didst thou travel on life's common way
> In cheerful godliness; and yet thy heart
> The lowliest duties on itself did lay."

He laid on himself the lowliest duties. Johnson petulantly taunts Milton with "great promise and small performance," in returning from Italy because his country was in danger, and then opening a private school. Milton, wiser, felt no absurdity in this conduct. He returned into his revolutionized country, and assumed an honest and useful task, by which he might serve the state daily, whilst he launched from time to time his formidable bolts against the enemies of liberty. He felt the heats of that "love" which "esteems no office mean." He compiled a logic for boys; he wrote a grammar; and devoted much of his time to the preparing of a Latin dictionary. But the religious sentiment warmed his writings and conduct with the highest affection of faith. The memorable covenant, which in his youth, in the second book of the Reason of Church Government, he makes with God and his reader, expressed the faith of his old age. For the first time since many ages, the invocations of the Eternal Spirit in the commencement of his books are not poetic forms, but are thoughts, and so are still read with delight. His views of choice of profession, and choice in marriage, equally expect a divine leading.

¶ Thus chosen, by the felicity of his nature and of his breeding, for the clear perception of all that is graceful and all that is great in man, Milton was not less happy in his times. His birth fell upon the agitated years when the discontents of the English Puritans were fast drawing to a head against the tyranny of the Stuarts. No period has surpassed that in the general activity of mind. It is said that no opinion, no civil, religious, moral dogma can be produced that was not broached in the fertile brain of that age. Questions that involve all social and personal rights were hasting to be decided by the sword, and were searched by eyes to which the love of freedom, civil and religious, lent new illumination. Milton, gentle, learned, delicately bred in all the elegancy of art and learning, was set down in England by the stern, almost fanatic society of the Puritans. The part he took, the zeal of his fellowship, make us acquainted with the greatness of his spirit as in tranquil times we could not have known it. Susceptible as Burke to the attractions of historical prescription, of royalty, of chivalry, of an ancient church illustrated by old martyrdoms and installed in cathedrals,—he threw himself, the flower

of elegancy, on the side of the reeking conventicle; the side of humanity, but unlearned and unadorned. His muse was brave and humane, as well as sweet. He felt the dear love of native land and native language. The humanity which warms his pages begins, as it should, at home. He preferred his own English, so manlike he was, to the Latin, which contained all the treasures of his memory. "My mother bore me," he said, "a speaker of what God made mine own, and not a translator." He told the Parliament that "the imprimaturs of Lambeth House had been writ in Latin; for that our English, the language of men ever famous and foremost in the achievements of liberty, will not easily find servile letters enow to spell such a dictatory presumption." At one time he meditated writing a poem on the settlement of Britain, and a history of England was one of the three main tasks which he proposed to himself. He proceeded in it no further than to the Conquest. He studied with care the character of his countrymen, and once in the History, and once again in the Reason of Church Government, he has recorded his judgment of the English genius.

¶ Thus drawn into the great controversies of the times, in them he is never lost in a party. His private opinions and private conscience always distinguish him. That which drew him to the party was his love of liberty, ideal liberty; this therefore he could not sacrifice to any party. Toland tells us, 'As he looked upon true and absolute freedom to be the greatest happiness of this life, whether to societies or single persons, so he thought constraint of any sort to be the utmost misery; for which reason he used to tell those about him the entire satisfaction of his mind that he had constantly employed his strength and faculties in the defence of liberty, and in direct opposition to slavery." Truly he was an apostle of freedom; of freedom in the house, in the state, in the church; freedom of speech, freedom of the press; yet in his own mind discriminated from savage license, because that which he desired was the liberty of the wise man, containing itself in the limits of virtue. He pushed, as far as any in that democratic age, his ideas of *civil* liberty. He proposed to establish a republic, of which the federal power was weak and loosely defined, and the substantial power should remain with primary assemblies. He maintained that a nation may try, judge and slay their king, if he be a tyrant. He pushed as far his views of *ecclesiastical* liberty. He taught the doctrine of unlimited toleration. One of his tracts is writ to prove that no power on earth can compel in matters of religion. He maintained the doctrine of *literary* liberty, denouncing the censorship of the press, and insisting that a book shall come into the world as freely as a man, so only it bear the name of author or printer, and be responsible for itself like a man. He maintained the doctrine of *domestic* liberty, or the liberty of divorce, on the ground that unfit disposition of mind was a better reason for the act of divorce than infirmity of body, which was good ground in law. The tracts he wrote on these topics are, for the most part, as fresh and pertinent today as they were then. The events which produced them, the practical issues to which they tend, are mere occasions for this philanthropist to blow his trumpet for human rights. They are all varied applications of one principle, the liberty of the wise man. He sought absolute truth, not accommodating truth. His opinions on all subjects are formed for man as he ought to be, for a nation of Miltons. He would be divorced when he finds in his consort unfit disposition; knowing that he should not abuse that liberty, because with his whole heart he abhors licentiousness and loves chastity. He defends the slaying of the king, because a king is a king no longer than he governs by the laws; "it would be right to kill Philip of Spain making an inroad into England, and what right the king of Spain hath to govern us at all, the same hath the king Charles to govern tyrannically." He would remove hirelings out of the church, and support preachers by voluntary contributions; requiring that such only should preach

as have faith enough to accept so self-denying and precarious a mode of life, scorning to take thought for the aspects of prudence and expediency. The most devout man of his time, he frequented no church; probably from a disgust at the fierce spirit of the pulpits. And so, throughout all his actions and opinions, is he a consistent spiritualist, or believer in the omnipotence of spiritual laws. He wished that his writings should be communicated only to those who desire to see them. He thought nothing honest was low. He thought he could be famous only in proportion as he enjoyed the approbation of the good. He admonished his friend "not to admire military prowess, or things in which force is of most avail. For it would not be matter of rational wonder, if the wethers of our country should be born with horns that could batter down cities and towns. Learn to estimate great characters, not by the amount of animal strength, but by the habitual justice and temperance of their conduct."

¶ Was there not a fitness in the undertaking of such a person to write a poem on the subject of Adam, the first man? By his sympathy with all Nature; by the proportion of his powers; by great knowledge, and by religion, he would reascend to the height from which our nature is supposed to have descended. From a just knowledge of what man should be, he described what he was. He beholds him as he walked in Eden:—

"His fair large front and eye sublime declared
Absolute rule; and hyacinthine locks
Round from his parted forelock manly hung
Clustering, but not beneath his shoulders broad."

And the soul of this divine creature is excellent as his form. The tone of his thought and passion is as healthful, as even and as vigorous as befits the new and perfect model of a race of gods.

¶ The perception we have attributed to Milton, of a purer ideal of humanity, modifies his poetic genius. The man is paramount to the poet. His fancy is never transcendent, extravagant; but as Bacon's imagination was said to be "the noblest that ever contented itself to minister to the understanding," so Milton's ministers to the character. Milton's sublimest song, bursting into heaven with its peals of melodious thunder, is the voice of Milton still. Indeed, throughout his poems, one may see, under a thin veil, the opinions, the feelings, even the incidents of the poet's life, still reappearing. The sonnets are all occasional poems. L' Allegro and Ill Penseroso are but a finer autobiography of his youthful fancies at Harefield; the Cosmus a transcript, in charming numbers, of that philosophy of chastity, which, in the Apology for Smectymnuus, and in the Reason of Church Government, he declares to be his defence and religion. The Samson Agonistes is too broad an expression of his private griefs to be mistaken, and is a version of the Doctrine and Discipline of Divorce. The most affecting passages in Paradise Lost are personal allusions; and when we are fairly in Eden, Adam and Milton are often difficult to be separated. Again, in Paradise Regained, we have the most distinct marks of the progress of the poet's mind, in the revision and enlargement of his religious opinions. This may be thought to abridge his praise as a poet. It is true of Homer and Shakspeare that they do not appear in their poems; that those prodigious geniuses did cast themselves so totally into their song that their individuality vanishes, and the poet towers to the sky, whilst the man quite disappears. The fact is memorable. Shall we say that in our admiration and joy in these wonderful poems we have even a feeling of regret that the men knew not what they did; that they were too passive in their great service; were channels through which streams of thought flowed from a higher source, which they did not appropriate, did not blend with their own being? Like prophets, they seem but imperfectly aware of the import of their own utterances. We hesitate to say such things, and say them only to the unpleasing dualism, when the man and the poet show like a double consciousness. Perhaps we speak to no

fact, but to mere fables, of an idle mendicant Homer, and of a Shakspeare content with a mean and jocular way of life. Be it how it may, the genius and office of Milton were different, namely, to ascend by the aids of his learning and his religion—by an equal perception, that is, of the past and the future—to a higher insight and more lively delineation of the heroic life of man. This was his poem; whereof all his indignant pamphlets and all his soaring verses are only single cantos or detached stanzas. It was plainly needful that his poetry should be a version of his own life, in order to give weight and solemnity to his thoughts; by which they might penetrate and possess the imagination and the will of mankind. The creations of Shakspeare are cast into the world of thought to no further end than to delight. Their intrinsic beauty is their excuse for being. Milton, fired "with dearest charity to infuse the knowledge of good things into others," tasked his giant imagination and exhausted the stores of his intellect for an end beyond, namely, to teach. His own conviction it is which gives such authority to his strain. Its reality is its force. If out of the heart it came, to the heart it must go. What schools and epochs of common rhymers would it need to make a counterbalance to the severe oracles of his muse:——

"In them is plainest taught and easiest learnt,
What makes a nation happy, and keeps it so."

¶ The lover of Milton reads one sense in his prose and in his metrical compositions; and sometimes the muse soars highest in the former, because the thought is more sincere. Of his prose in general, not the style alone but the argument also is poetic; according to Lord Bacon's definition of poetry, following that of Aristotle, "Poetry, not finding the actual word exactly conformed to its idea of good and fair, seeks to accommodate the shows of things to the desires of the mind, and to create an ideal world better than the world of experience." Such certainly is the explanation of Milton's tracts. Such is the apology to be entered for the plea of freedom of divorce; an essay, which, from the first, until now, has brought a degree of obloquy on his name. It was a sally of the extravagant spirit of the time, overjoyed, as in the French Revolution, with the sudden victories it had gained, and eager to carry on the standard of truth to new heights. It is to be regarded as a poem on one of the griefs of man's condition, namely, unfit marriage. And as many poems have been written upon unfit society, commending solitude, yet have not been proceeded against, though their end was hostile to the state; so should this receive that charity which an angelic soul, suffering more keenly than others from the unavoidable evils of human life, is entitled to.

¶ We have offered no apology for expanding to such length our commentary on the character of John Milton; who, in old age, in solitude, in neglect, and blind, wrote the Paradise Lost; a man whom labor or danger never deterred from whatever efforts a love of the supreme interests of man prompted. For are we not the better; are not all men fortified by the remembrance of the bravery, the purity, the temperance, the toil, the independence and the angelic devotion of this man, who, in a revolutionary age, taking counsel only of himself, endeavored, in his writings and in his life, to carry out the life of man to new heights of spiritual grace and dignity, without any abatement of its strength?

ART AND CRITICISM

LITERATURE is but a poor trick, you will say, when it busies itself to make words pass for things; and yet I am far from thinking this subordinate service unimportant. The secondary services of literature may be classed under the name of Rhetoric, and are quite as important in letters as iron is in war. An enumeration of the few principal weapons of the poet or writer will at once suggest their value.

¶ Writing is the greatest of arts, the subtilest, and of most miraculous effect; and to it the education is costliest. On the writer the choicest influences are concentrated,——nothing that does not go to his costly equipment: a war, an earthquake, revival of letters, the new dispensation by Jesus, or by Angels; Heaven, Hell, power, science, the *Néant*, exist to him as colors for his brush.

¶ In this art modern society has introduced a new element, by introducing a new audience. The decline of the privileged orders, all over the world; the advance of the Third Estate; the transformation of the laborer into reader and writer has compelled the learned and the thinkers to address them. Chiefly in this country, the common school has added two or three audiences: once, we had only the boxes; now, the galleries and the pit.

¶ There is, in every nation, a style which never becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language as to remain settled and unaltered. This style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hope of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement where prosperity resides, and where Shakspeare seems to have gathered his comic dialogue. Goethe valued himself not on his learning or eccentric flights, but that he knew how to write German. And many of his poems are so idiomatic, so strongly rooted in the German soil, that they are the terror of translators, who say they cannot be rendered into any other language without loss of vigor, as we say of any darling passage of our own masters. "Le style c'est l'homme," said Buffon; and Goethe said, "Poetry here, poetry there, I have learned to speak German." And when I read of various extraordinary polyglots, self-made or college-made, who can understand fifty languages, I answer that I shall be glad and surprised to find that they know one. For if I were asked how many masters of English idiom I know, I shall be perplexed to count five.

¶ Ought not the scholar to convey his meaning in terms as short and strong as the smith and the drover use to convey theirs? You know the history of the eminent English writer on gypsies, George Borrow; he had one clear perception, that the key to every country was command of the language of the common people. He therefore mastered the *patois* of the gypsies, called Romany, which is spoken by them in all countries where they wander, in Europe, Asia, Africa. Yet much of the raw material of the street-talk is absolutely untranslatable into print, and one must learn from Burke how to be severe without being unparliamentary. Rabelais and Montaigne are masters of this Romany, but cannot be read aloud, and so far fall short. Whitman is our American master, but has not got out of the Fire-Club and gained the *entrée* of the sitting-rooms. Bacon, if "he could out-cant a London chirurgeon," must have possessed the Romany under his brocade robes. Luther said, "I preach coarsely; that giveth content to all. Hebrew, Greek and Latin I spare, until we learned

ones come together, and then we make it so curled and finical that God himself wondereth at us." He who would be powerful must have the terrible gift of familiarity,—Mirabeau, Chatham, Fox, Burke, O'Connell, Patrick Henry; and among writers, Swift, De Foe and Carlyle.

¶ Look at this forlorn caravan of travellers who wander over Europe dumb, —never exchange a word, in the mother tongue of either, with prince or peasant; but condemned to the company of a courier and of the padrone when they cannot take refuge in the society of countrymen. A well-chosen series of stereoscopic views would have served a better purpose, which they can explore at home, sauced with joyful discourse and with reference to all the books in your library.

AS soon as you read aloud, you will find what sentences drag. Blot them out, and read again, you will find the words that drag. 'T is like a pebble inserted in a mosaic. Resolute blotting rids you of all those phrases that sound like something and mean nothing.

¶ Speak with the vulgar, think with the wise. See how Plato managed it, with an imagination so gorgeous, and a taste so patrician, that Jove, if he descended, was to speak in his style. Into the exquisite refinement of his Academy, he introduces the low-born Socrates, relieving the purple diction by his perverse talk, his gallipots, and cook, and trencher, and cart-wheels—and steadily kept this coarseness to flavor a dish else too luscious. Everybody knows the points in which the mob has the advantage of the Academy, and all able men have known how to import the petulance of the street into correct discourse. I heard, when a great bank president was expounding the virtues of his party and of the government to a silent circle of bank pensioners, a grave Methodist exclaimed "Fiddlesticks!" The whole party were surprised and cheered, except the bank president, though it would be difficult to explain the propriety of the expression, as no music or fiddle was so much as thought of.

¶ Not only low style, but the lowest classifying words outvalue arguments; as, upstart, dab, cockney, prig, granny, lubber, puppy, peacock—"A cocktail House of Commons." I remember when a venerable divine [Dr. Osgood] called the young preacher's sermon "patty cake." The *sans-culottes* at Versailles cried out, "Let our little Mother Mirabeau speak!" Who has not heard in the street how forcible is bosh, gammon and gas. The short Saxon words with which the people help themselves are better than Latin. The language of the street is always strong. I envy the boys the force of the double negative (no shoes, no money, no nothing), though clean contrary to our grammar rules, and I confess to some titillation of my ears from a rattling oath.

¶ In the infinite variety of talents, 't is certain that some men swear with genius. I knew a poet in whose talent Nature carried this freak so far that his only graceful verses were pretty blasphemies. "The better the worse," you will say; and I own it reminds one of Vathek's collection of monstrous men with humps of a picturesque peak, and horns of exquisite polish. What traveller has not listened to the vigor of the *Sacre!* of the French postilion, the *Sia ammazato!* of the Italian contadino, or the deep stomach of an English drayman's execration. I remember an occasion when a proficient in this style came from North Street to Cambridge and drew a crowd of young critics in the college yard, who found his wrath so æsthetic and fertilizing that they took notes, and even overstayed the hour of

the mathematical professor.

¶ 'T is odd what revolutions occur. We were educated in horror of Satan, but Goethe remarked that all men like to hear him named. Burns took him into compassion and expressed a blind wish for his reformation.

> "Ye aiblins might, I dinna ken,
> Still have a stake."

And George Sand finds a whole nation who regard him as a personage who has been greatly wronged, and in which he is really the subject of a covert worship. As a study in language, the use of this word is curious, to see how words help us and must be philosophical. The Devil in philosophy is absolute negation, falsehood, nothing; and in the popular mind, the Devil is a malignant person. Yet all our speech expresses the first sense. "The Devil a monk was he," means, *he was no monk,* and "The Devil you did!" means *you did not.* Natural science gives us the inks, the shades; ink of Erebus—night of Chaos. . . . Goethe, who had collected all the diabolical hints in men and nature for traits for his *Walpurgis Nacht,* continued the humor of collecting such horrors after this first occasion had passed, and professed to point his guest to his Walpurgis Sack, or Acherontian Bag, in which, he said, he put all his dire hints and images, and into which, he said, he should be afraid to fall himself, lest he should be burnt up. Dante is the professor that shall teach both the noble low style, the power of working up all his experience into heaven and hell; also the sculpture of compression.

¶ The next virtue of rhetoric is compression, the science of omitting, which makes good the old verse of Hesiod, "Fools, they did not know that half was better than the whole." The French have a neat phrase, that the secret of boring you is that of telling all,—"Le secret d'ennuyer est celui de tout dire;" which we translate short, "Touch and go." The silences, pauses, of an orator are as telling as his words. What the poet omits exalts every syllable that he writes. In good hands it will never become sterility. A good writer must convey the feeling of a flamboyant witness, and at the same time of chemic selection, —as if in his densest period was no cramp, but room to turn a chariot and horses between his valid words. There is hardly danger in America of excess of condensation; there must be no cramp insufficiency, but the superfluous must be omitted. In the Hindoo mythology, "Viswaharmán" placed the sun on his lathe to grind off some of his effulgence, and in this manner reduced it to an eighth,—more was inseparable. . . .

¶ In architecture the beauty is increased in the degree in which the material is safely diminished; as when you break up a prose wall, and leave all the strength in the poetry of columns. As soon as you read aloud, you will find what sentences drag. Blot them out, and read again, you will find the words that drag. 'T is like a pebble inserted in a mosaic. Resolute blotting rids you of all those phrases that sound like something and mean nothing, with which scriptural forms play a large part. Never say, "I beg not to be misunderstood." It is only graceful in the case when you are afraid that what is called a better meaning will be taken, and you wish to insist on a worse; a man has a right to pass, like Dean Swift, for a worse man than he is, but not for a better.

¶ And I sometimes wish that the Board of Education might carry out the project of a college for graduates of our universities, to which editors and members of Congress and writers of books might repair, and learn to sink what we could best spare of our words; to gazette those Americanisms which offend us in all journals. Some of these are odious. *Some* as an adverb—"reeled some;" *considerable* as an adverb for *much;* "quite a number;" *slim* for *bad;* the adjective *graphic,* which means *what is written,*—graphic arts and oral arts, arts of writing, and arts of speech and song,—but is used as if it meant *descriptive:* "Minerva's graphic thread." A Mr. Randall, M. C., who appeared before the committee of the House of Commons on the subject of the Ameri-

can mode of closing a debate, said, "that the one-hour rule worked well; made the debate short and graphic." 'T is the worst praise you can give a speech that it is as if written.

¶ Never use the word *development*, and be wary of the whole family of Fero. Dangerous words in like kind are *display, improvement, peruse, circumstances, commence* for *begin*. Vulgarisms to be gazetted, *moiety* used for *a small part;*—"nothing would answer but;" "there is none but what"—"there being scarce a person of any note in England but what some time or other paid a visit or sent a present to our Lady of Walsingham" (Bishop Parcy); "might have to go;" "I have been to Europe;" "in our midst;" *considerable*—"it is considerable of a compliment," "under considerable of a cloud;" *balance* for *remainder*—"spent the balance of his life;" *"as a general thing;" "after all."* Confusions of *lie* and *lay, sit* and *set, shall* and *will*.

¶ Persons have been named from their abuse of certain phrases, as "Pyramid" Lambert, "Finality" Russell, "Humanity" Martin, "Horizon" Turner.

¶ Every age gazettes a quantity of words which it has used up. We are now offended with "Standpoint," "Myth," "Subjective," "the Good and the True" and "the Cause."

¶ A list might be made of showy words that tempt young writers: *asphodel, harbinger, chalice, flamboyant, golden, diamond, amethyst, opal* and the rest of the precious stones, *carcanet, diadem*.

¶ But these cardinal rules of rhetoric find best examples in the great masters, and are main sources of the delight they give. Shakspeare might be studied for his dexterity in the use of these weapons, if it were not for his heroic strength. There is no such master of low style as he, and therefore none can securely soar so high. I do not mean that he delights in comedy, exults in bringing the street itself, uproarious with laughter and animal joy, on to the scene, with Falstaff and Touchstone and Trinculo and the fools; but that in the conduct of the play, and the speech of the heroes, he keeps the level tone which is the tone of high and low alike, and most widely understood. A man of experience altogether, his very sonnets are as solid and close to facts as the Banker's Gazette; and the only check on the detail of each of his portraits is his own universality, which made bias or fixed ideas impossible—his impartiality is like a sunbeam.

¶ His fun is as wise as his earnest, its foundations are below the frost. His muse is moral simply from its depth, and I value the intermixture of the common and the transcendental as in Nature. One would say Shakspeare must have been a thousand years old when he wrote his first piece; so thoroughly is his thought familiar to him, so solidly worded, as if it were already a proverb, and not only hereafter to become one. Well, that millennium is really only a little acceleration in his process of thought; his loom is better toothed, cranked and pedalled than other people's, and he can turn off a hundred yards to their one. Shakspeare is nothing but a large utterance. We cannot find that anything in his age was more worth expression than anything in ours; nor give any account of his existence, but only the fact that there was a wonderful symbolizer and expressor, who has no rival in all ages and who has thrown an accidental lustre over his time and subject.

¶ My friend thinks the reason why the French mind is so shallow, and still to seek, running into vagaries and blind alleys, is because they do not read Shakspeare; whilst the English and Germans, who read Shakspeare and the Bible, have a great onward march. Shakspeare would have sufficed for the culture of a nation for vast periods. The Chinese have got on so long with their solitary Confucius and Mencius; the Arabs with their Mahomet; the Scandinavians with their Snorre Sturleson; and if the English island had been larger and the Straits of Dover wider, to keep it at pleasure a little out of the imbroglio of Europe, they might have

managed to feed on Shakspeare for some ages yet; as the camel in the desert is fed by his humps, in long absence from food.

¶ Montaigne must have the credit of giving to literature that which we listen for in barrooms, the low speech,—words and phrases that no scholar coined; street-cries and war-cries; words of the boatman, the farmer and the lord; that have neatness and necessity, through their use in the vocabulary of work and appetite, like the pebbles which the incessant attrition of the sea has rounded. Every historic autobiographic trait authenticating the man adds to the value of the book. We can't afford to take the horse out of the Essays; it would take the rider too.

¶ Herrick is a remarkable example of the low style. He is, therefore, a good example of the modernness of an old English writer. So Latimer, so Chaucer, so the Bible. He found his subject where he stood, between his feet, in his house, pantry, barn, poultry-yard, in his village, neighbors' gossip and scandal. Like Montaigne in this, that his subject cost him nothing, and he knew what he spake of, and did not write up to it, but could write down (a main secret), and took his level, so that he had all his strength, the easiness of strength; he took what he knew, and "took it easy," as we say. The Germans praise in Goethe the comfortable stoutness. Herrick's merit is the simplicity and manliness of his utterance, and, rarely, the weight of his sentence. He has, and knows that he has, a noble, idiomatic English, a perfect, plain style, from which he can soar to a fine, lyric delicacy, or descend to coarsest sarcasm, without losing his firm footing. This flower of speech is accompanied with an assurance of fame. We have an artist who in this merit of which I speak will easily cope with these celebrities.

¶ In Carlyle as in Byron one is more struck with the rhetoric than with the matter. He has manly superiority rather than intellectuality, and so makes hard hits all the time. There 's more character than intellect in every sentence—herein strongly resembling Samuel Johnson. The best service Carlyle has rendered is to rhetoric, or art of writing. In his books the vicious conventions of writing are all dropped. You have no board interposed between you and the writer's mind, but he talks flexibly, now high, now low, in loud emphasis, in undertones, then laughs till the walls ring, then calmly moderates, then hints, or raises an eyebrow. He has gone nigher to the wind than any other craft.

¶ Carlyle, with his inimitable ways of saying the thing, is next best to the inventor of the thing, and I think of him when I read the famous inscription on the pyramid, "I King Saib built this pyramid. I, when I had built it, covered it with satin. Let him who cometh after me, and says he is equal to me, cover it with mats." What he has said shall be proverb, nobody shall be able to say it otherwise. No book can any longer be tolerable in the old husky Neal-on-the-Puritans model. In short, I think the revolution wrought by Carlyle is precisely parallel to that going forward in picture, by the stereoscope. Until history is interesting, it is not yet written.

¶ Here has come into the country, three months ago, a History of Friedrich, infinitely the wittiest book that ever was written; a book that, one would think, the English people would rise up in a mass to thank him for, by cordial acclamation, and signify, by crowning him with chaplet of oak-leaves, their joy that such a head existed among them, and sympathizing and much-reading America would make a new treaty or send a minister extraordinary to offer congratulations of honoring delight to England in acknowledgment of such a donation; a book holding so many memorable and heroic facts, working directly on practice; with new heroes, things unvoiced before—the German Plutarch, now that we have exhausted the Greek and Roman and British biography—with a range, too, of thought and wisdom, so large, so colloquially elastic, that we not so much read a stereotype page as we see the eyes of the writer looking into ours, whilst

he is humming and chuckling, with undertones, and trumpet-tones, and shrugs, and long commanding glances, stereoscoping every figure that passes, and every hill, river, wood, hummock and pebble in the long perspective, with its wonderful mnemonics, whereby great and insignificant men are ineffaceably marked and medalled in the memory by what they were, had and did; and withal a book that is a judgment-day for its moral verdict on the men and nations and manners of modern times. And this book makes no noise. I have hardly seen a notice of it in any newspaper or journal, and you would think there was no such book. I am not aware that Mr. Buchanan has sent a special messenger to Great Cheyne Row, Chelsea; but the secret interior wits and hearts of men take note of it, not the less surely. They have said nothing lately in praise of the air, or of fire, or of the blessing of love, and yet, I suppose, they are sensible of these, and not less of this Book, which is like these.

¶ After Low Style and Compression what the books call *Metonomy* is a principal power of rhetoric. It means, using one word or image for another. It is a low idealism. Idealism regards the world as symbolic, and all these symbols or forms as fugitive and convertible expressions. The power of the poet is in controlling these symbols; in using every fact in Nature, however great and stable, as a fluent symbol, and in measuring his strength by the facility with which he makes the mood of mind give its color to things. The world, history, the powers of Nature,—he can make them speak what sense he will.

¶ All conversation, as all literature, appears to me the pleasure of rhetoric, or, I may say, of *metonomy*. "To make of motes mountains, and of mountains motes," Isocrates said, "was the orator's office." Well, that is what poetry and thinking do. Whatever new object we see, we perceive to be only a new version of our familiar experience, and we set about translating it at once into our parallel facts. We have hereby our vocabulary.

¶ Everything has two handles. Pindar when the victor in a race by mules offered him a trifling present, pretended to be hurt at thought of writing on demi-asses. When, however, he offered a sufficient present, he composed the poem:—

> "Hail, daughters of the tempest-footed horse,
> That skims like wind along the course."

That was the other handle. I passed at one time through a place called New City, then supposed, like each of a hundred others, to be destined to greatness. I fell in with one of the founders who showed its advantages and its river and port and the capabilities: "Sixty houses, sir, were built in a night, like tents." After Chicago had secured the confluence of the railroads to itself, I chanced to meet my founder again, but now removed to Chicago. He had transferred to that city the magnificent dreams which he had once communicated to me, and no longer remembered his first emporium. "Where is the town? Was there not," I asked, "a river and a harbor there?" "Oh yes, there was a guzzle out of a sand-bank." "And the town?" "There are still the sixty houses, but when I passed it, one owl was the only inhabitant." When Samuel Dexter, long since, argued the claims of South Boston Bridge, he had to meet loud complaints of the shutting out of the coasting-trade by the proposed improvements. "Now," said he, "I come to the grand charge that we have obstructed the commerce and navigation of Roxbury Ditch." 'T is very easy to call the gracious spring "poor goody herb-wife," or to represent the farm, which stands for the organization of the gravest needs, as a poor trifle of peavines, turnips and hen-roosts. Everything has two handles. Shakspeare says, "A plague of opinion; a man can wear it on both sides, like a leather jerkin."

¶ Here is my friend E., the model of opinionists. He is the April day incarnated and walking, soft sunshine and hailstones, sour east wind and flowery

southwest—alternating, and each sovereign, and painting all things its own color. He has it all his own way. He complains of Nature,—too many leaves, too windy and grassy, and I suppose the birds are too feathery and the horses too leggy. He thinks Egypt a humbug, and Palestine used up, and England a flash in the pan; and that the only art is landscape-painting. But when we came, in the woods, to a clump of goldenrod,—"Ah!" he says, "here they are! these things consume a great deal of time. I don't know but they are of more importance than any other of our investments." Well, this is the game that goes on every day in all companies; this is the ball that is tossed in every court of law, in every legislature and in literature, and in the history of every mind by sovereignty of thought to make facts and men obey our present humor or belief.

¶ I designed to speak of one point more, the touching a principal question in criticism in recent times—the Classic and Romantic, or what is classic?

¶ The art of writing is the highest of those permitted to man as drawing directly from the soul, and the means or material it uses are also of the soul. It brings man into alliance with what is great and eternal. It discloses to him the variety and splendor of his resources. And there is much in literature that draws us with a sublime charm—the superincumbent necessity by which each writer, an infirm, capricious, fragmentary soul, is made to utter his part in the chorus of humanity, is enriched by thoughts which flow from all past minds, shares the hopes of all existing minds; so that, whilst the world is made of youthful, helpless children of a day, literature resounds with the music of united vast ideas of affirmation and of moral truth.

¶ What is the Classic? Classic art is the art of necessity; organic; modern or romantic bears the stamp of caprice or chance. One is the product of inclination, of caprice, of haphazard; the other carries its law and necessity within itself.

¶ The politics of monarchy, when all hangs on the accidents of life and temper of a single person, may be called romantic politics. The democratic, when the power proceeds organically from the people and is responsible to them, are classic politics. The classic unfolds, the romantic adds. The classic *should*, the modern *would*. The classic is healthy, the romantic is sick. The classic draws its rule from the genius of that which it does, and not from by-ends. It does not make a novel to establish a principle of political economy.

¶ Don't set out to please; you will displease. The Augsburg Allgemeine Zeitung deprecates an observatory founded for the benefit of navigation. Nor can we promise that our School of Design will secure a lucrative post to the pupils.

¶ When I read Plutarch, or look at a Greek vase, I incline to accept the common opinion of scholars, that the Greeks had clearer wits than any other people. But there is anything but time in my idea of the antique. A clear or natural expression by word or deed is that which we mean when we love and praise the antique. In society I do not find it, in modern books, seldom; but when I come into the pastures, I find antiquity again. Once in the fields with the lowing cattle, the birds, trees and waters and satisfying curves of the landscape, and I cannot tell whether this is Thessaly and Enna, or whether Concord and Acton.

¶ A man of genius or a work of love or beauty will not come to order, can't be compounded by the best rules, but is always a new and incalculable result, like health. Don't rattle your rules in our ears; we must behave as we can. Criticism is an art when it does not stop at the words of the poet, but looks at the order of his thoughts and the essential quality of his mind. Then the critic is poet. 'T is a question not of talents but of tone; and not particular merits, but the mood of mind into which one and another can bring us.

PAPERS FROM THE DIAL

Thoughts on Modern Literature

IN our fidelity to the higher truth we need not disown our debt, in our actual state of culture, in the twilights of experience, to these rude helpers. They keep alive the memory and the hope of a better day. When we flout all particular books as initial merely, we truly express the privilege of spiritual nature, but alas, not the fact and fortune of this low Massachusetts and Boston, of these humble Junes and Decembers of mortal life. Our souls are not self-fed, but do eat and drink of chemical water and wheat. Let us not forget the genial miraculous force we have known to proceed from a book. We go musing into the vault of day and night; no constellation shines, no muse descends, the stars are white points, the roses, brick-colored leaves, and frogs pipe, mice cheep, and wagons creak along the road. We return to the house and take up Plutarch or Augustine, and read a few sentences or pages, and lo! the air swims with life, secrets of magnanimity and grandeur invite us on every hand, life is made up of them. Such is our debt to a book. Observe moreover that we ought to credit literature with much more than the bare word it gives us. I have just been reading poems which now in memory shine with a certain steady, warm, autumnal light. That is not in their grammatical construction which they give me. If I analyze the sentences, it eludes me, but is the genius and suggestion of the whole. Over every true poem lingers a certain wild beauty, immeasurable; a happiness lightsome and delicious fills the heart and brain, as they say every man walks environed by his proper atmosphere, extending to some distance around him. This beautiful result must be credited to literature also in casting its account.

WE read a few sentences or pages and lo! the air swims with life, secrets of magnanimity and grandeur invite us on every hand, life is made up of them. Such is our debt to a book.

¶ In looking at the library of the Present Age, we are first struck with the fact of the immense miscellany. It can hardly be characterized by any species of book, for every opinion, old and new, every hope and fear, every whim and folly, has an organ. It exhibits a vast carcass of tradition every year with as much solemnity as a new revelation. Along with these it vents books that breathe of new morning, that seem to heave with the life of millions, books for which men and women peak and pine; books which take the rose out of the cheek of him that wrote them, and give him to the midnight a sad, solitary, diseased man; which leave no man where they found him, but make him better or worse; and which work dubiously on society and seem to inoculate it with a venom before any healthy result appears.

¶ In order to any complete view of the literature of the present age, an inquiry should include what it quotes, what it writes and what it wishes to write. In our present attempt to enumerate some traits of the recent literature, we shall have somewhat to offer on each of these topics, but we cannot promise to set in very exact order what we have to say.

¶ In the first place it has all books. It reprints the wisdom of the world. How

can the age be a bad one which gives me Plato and Paul and Plutarch, Saint Augustine, Spinoza, Chapman, Beaumont and Fletcher, Donne and Sir Thomas Browne, beside its own riches? Our presses groan every year with new editions of all the select pieces of the first of mankind,—meditations, history, classifications, opinions, epics, lyrics, which the age adopts by quoting them. If we should designate favorite studies in which the age delights more than in the rest of this great mass of the permanent literature of the human race, one or two instances would be conspicuous. First; the prodigious growth and influence of the genius of Shakspeare, in the last one hundred and fifty years, is itself a fact of the first importance. It almost alone has called out the genius of the German nation into an activity which, spreading from the poetic into the scientific, religious and philosophical domains, has made theirs now at last the paramount intellectual influence of the world, reacting with great energy on England and America. And thus, and not by mechanical diffusion, does an original genius work and spread himself.

¶ The poetry and speculation of the age are marked by a certain philosophic turn, which discriminates them from the works of earlier times. The poet is not content to see how "Fair hangs the apple from the rock," "What music a sunbeam awoke in the groves," nor of Hardiknute, how

> "Stately stept he east the wa,
> And stately stept he west,"

but he now revolves, What is the apple to me? and what the birds to me? and what is Hardiknute to me? and what am I? And this is called subjectiveness, as the eye is withdrawn from the object and fixed on the subject or mind.

¶ We can easily concede that a steadfast tendency of this sort appears in modern literature. It is the new consciousness of the one mind, which predominates in criticism. It is the uprise of the soul, and not the decline. It is founded on that insatiable demand for unity, the need to recognize one nature in all the variety of objects, which always characterizes a genius of the first order. Accustomed always to behold the presence of the universe in every part, the soul will not condescend to look at any new part as a stranger, but saith,—"I know all already, and what art thou? Show me thy relations to me, to all, and I will entertain thee also."

¶ There is a pernicious ambiguity in the use of the term *subjective*. We say, in accordance with the general view I have stated, that the single soul feels its right to be no longer confounded with numbers, but itself to sit in judgment on history and literature, and to summon all facts and parties before its tribunal. And in this sense the age is subjective.

¶ But, in all ages, and now more, the narrow-minded have no interest in anything but in its relation to their personality. What will help them to be delivered from some burden, eased in some circumstance, flattered or pardoned or enriched; what will help to marry or to divorce them, to prolong or to sweeten life, is sure of their interest; and nothing else. Every form under the whole heaven they behold in this most partial light or darkness of intense selfishness, until we hate their being. And this habit of intellectual selfishness has acquired in our day the fine name of subjectiveness.

¶ Nor is the distinction between these two habits to be found in the circumstances of using the first person singular, or reciting facts and feelings of personal history. A man may say I, and never refer to himself as an individual; and a man may recite passages of his life with no feeling of egotism. Nor need a man have a vicious subjectiveness because he deals in abstract propositions.

¶ But the criterion which discriminates these two habits in the poet's mind is the tendency of his composition; namely, whether it leads us to Nature, or to the person of the writer. The great always introduce us to facts; small men introduce us always to themselves. The great man, even whilst he relates

a private fact personal to him, is really leading us away from him to an universal experience. His own affection is in Nature, in *what is*, and, of course, all his communication leads outward to it, starting from whatsoever point. The great never with their own consent become a load on the minds they instruct. The more they draw us to them, the farther from them or more independent of them we are, because they have brought us to the knowledge of somewhat deeper than both them and us. The great never hinder us; for their activity is coincident with the sun and moon, with the stream of laborers in the street and with all the activity and well-being of the race. The great lead us to Nature, and in our age to metaphysical Nature, to the invisible awful facts, to moral abstractions, which are not less Nature than is a river, or a coal-mine,—nay, they are far more Nature,—but its essence and soul.

¶ But the weak and wicked, led also to analyze, saw nothing in thought but luxury. Thought for the selfish became selfish. They invited us to contemplate Nature, and showed us an abominable self. Would you know the genius of the writer? Do not enumerate his talents or his feats, but ask thyself, What spirit is he of? Do gladness and hope and fortitude flow from his page into thy heart? Has he led thee to Nature because his own soul was too happy in beholding her power and love? Or is his passion for the wilderness only the sensibility of the sick, the exhibition of a talent which only shines whilst you praise it; which has no root in the character, and can thus minister to the vanity but not to the happiness of the possessor; and which derives all its *éclat* from our conventional education, but would not make itself intelligible to the wise man of another age or country? The water we wash with never speaks of itself, nor does fire or wind or tree. Neither does the noble natural man: he yields himself to your occasion and use, but his act expresses a reference to universal good.

¶ Another element of the modern poetry akin to this subjective tendency, or rather the direction of that same on the question of resources, is the Feeling of the Infinite. Of the perception now fast becoming a conscious fact,—that there is One Mind, and that all the powers and privileges which lie in any, lie in all; that I, as a man, may claim and appropriate whatever of true or fair or good or strong has anywhere been exhibited; that Moses and Confucius, Montaigne and Leibnitz, are not so much individuals as they are parts of man and parts of me, and my intelligence proves them my own,—literature is far the best expression. It is true, this is not the only nor the obvious lesson it teaches. A selfish commerce and government have caught the eye and usurped the hand of the masses. It is not to be contested that selfishness and the senses write the laws under which we live, and that the street seems to be built, and the men and women in it moving, not in reference to pure and grand ends, but rather to very short and sordid ones. Perhaps no considerable minority, no one man, leads a quite clean and lofty life. What then? We concede in sadness the fact. But we say that these low customary ways are not all that survives in human beings. There is that in us which mutters, and that which groans, and that which triumphs, and that which aspires. There are facts on which men of the world superciliously smile, which are worth all their trade and politics; which drive young men into gardens and solitary places, and cause extravagant gestures, starts, distortions of the countenance and passionate exclamations; sentiments, which find no aliment or language for themselves on the wharves, in court, or market, but which are soothed by silence, by darkness, by the pale stars, and the presence of Nature. All over the modern world the educated and susceptible have betrayed their discontent with the limits of our municipal life, and with the poverty of our dogmas of religion and philosophy. They betray this impatience by fleeing for resource to a conversation with Nature, which

is courted in a certain moody and exploring spirit, as if they anticipated a more intimate union of man with the world than has been known in recent ages. Those who cannot tell what they desire or expect still sigh and struggle with indefinite thoughts and vast wishes. The very child in the nursery prattles mysticism, and doubts and philosophizes. A wild striving to express a more inward and infinite sense characterizes the works of every art. The music of Beethoven is said, by those who understand it, to labor with vaster conceptions and aspirations than music has attempted before. This feeling of the Infinite has deeply colored the poetry of the period. This new love of the vast, always native in Germany, was imported into France by De Staël, appeared in England in Coleridge, Wordsworth, Byron, Shelley, Felicia Hemans, and finds a most genial climate in the American mind. Scott and Crabbe, who formed themselves on the past, had none of this tendency; their poetry is objective. In Byron, on the other hand, it predominates; but in Byron it is blind, it sees not its true end—an infinite good, alive and beautiful, a life nourished on absolute beatitudes, descending into Nature to behold itself reflected there. His will is perverted, he worships the accidents of society, and his praise of Nature is thieving and selfish.

¶ Nothing certifies the prevalence of this taste in the people more than the circulation of the poems—one would say most incongruously united by some bookseller—of Coleridge, Shelley and Keats. The only unity is in the subjectiveness and the aspiration common to the three writers. Shelley, though a poetic mind, is never a poet. His music is uniformly imitative; all his poems composite. A good English scholar he is, with ear, taste and memory; much more, he is a character full of noble and prophetic traits; but imagination, the original, authentic fire of the bard, he has not. He is clearly modern, and shares with Richter, Châteaubriand, Manzoni and Wordsworth the feeling of the Infinite, which so labors for expression in their different genius. But all his lines are arbitrary, not necessary. When we read poerty, the mind asks, —Was this verse one of twenty which the author might have written as well; or is this what that man was created to say? But whilst every line of the true poet will be genuine, he is in a boundless power and freedom to say a million things. And the reason why he can say one thing well is because his vision extends to the sight of all things, and so he describes each as one who knows many and all.

THE prodigious growth and influence of the genius of Shakspeare, in the last one hundred and fifty years, is itself a fact of the first importance. It almost alone has called out the genius of the German nation into an activity which has made theirs now at last the paramount intellectual influence of the world.

¶ The fame of Wordsworth is a leading fact in modern literature, when it is considered how hostile his genius at first seemed to the reigning taste, and with what limited poetic talents his great and steadily growing dominion has been established. More than any poet his success has been not his own but that of the idea which he shared with his coevals, and which he has rarely succeeded in adequately expressing. The Excursion awakened in every lover of Nature the right feeling. We saw stars shine, we felt the awe of mountains, we heard the rustle of the wind in the grass, and knew again the ineffable secret of solitude. It was a great joy. It was nearer to Nature than anything we had before. But the interest of the poem ended almost with the nar-

rative of the influences of Nature on the mind of the Boy, in the First Book. Obviously for that passage the poem was written, and with the exception of this and of a few strains of the like character in the sequel, the whole poem was dull. Here was no poem, but here was poetry, and a sure index where the subtle muse was about to pitch her tent and find the argument of her song. It was the human soul in these last ages striving for a just publication of itself. Add to this, however, the great praise of Wordsworth, that more than any other contemporary bard he is pervaded with a reverence of somewhat higher than (conscious) thought. There is in him that property common to all great poets, a wisdom of humanity, which is superior to any talents which they exert. It is the wisest part of Shakspeare and of Milton. For they are poets by the free course which they allow to the informing soul, which through their eyes beholdeth again and blesseth the things which it hath made. The soul is superior to its knowledge, wiser than any of its works.

THE narrow-minded have no interest in anything but in its relation to their personality. What will help them to be delivered from some burden, eased in some circumstance, flattered or pardoned or enriched; what will help to marry or to divorce them, to prolong or to sweeten life, is sure of their interest; and nothing else.

¶ With the name of Wordworth rises to our recollection the name of his contemporary and friend, Walter Savage Landor—a man working in a very different and peculiar spirit, yet one whose genius and accomplishments deserve a wiser criticism than we have yet seen applied to them, and the rather that his name does not readily associate itself with any school of writers. Of Thomas Carlyle, also, we shall say nothing at this time, since the quality and energy of his influence on the youth of this country will require at our hands, ere long, a distinct and faithful acknowledgment.

¶ But of all men he who has united in himself, and that in the most extraordinary degree, the tendencies of the era, is the German poet, naturalist and philosopher, Goethe. Whatever the age inherited or invented, he made his own. He has owed to Commerce and to the victories of the Understanding, all their spoils. Such was his capacity that the magazines of the world's ancient or modern wealth, which arts and intercourse and skepticism could command,—he wanted them all. Had there been twice so much, he could have used it as well. Geologist, mechanic, merchant, chemist, king, radical, painter, composer,—all worked for him, and a thousand men seemed to look through his eyes. He learned as readily as other men breathe. Of all the men of this time, not one has seemed so much at home in it as he. He was not afraid to live. And in him this encyclopædia of facts, which it has been the boast of the age to compile, wrought an equal effect. He was knowing; he was brave; he was clean from all narrowness; he has a perfect propriety and taste,—a quality by no means common to the German writers. Nay, since the earth as we said had become a reading-room, the new opportunities seem to have aided him to be that resolute realist he is, and seconded his sturdy determination to see things for what they are. To look at him one would say there was never an observer before. What sagacity, what industry of observation. To read his record is a frugality of time, for you shall find no word that does not stand for a thing, and he is of that comprehension which can see the value of truth. His love of Nature has seemed to give a new meaning to that word. There

was never man more domesticated in this world than he. And he is an apology for the analytic spirit of the period, because, of his analysis, always wholes were the result. All conventions, all traditions he rejected. And yet he felt his entire right and duty to stand before and try and judge every fact in Nature. He thought it necessary to dot round with his own pen the entire sphere of knowables; and for many of his stories, this seems the only reason: Here is a piece of humanity I had hitherto omitted to sketch;—take this. He does not say so in syllables, yet a sort of conscientious feeling he had to be *up* to the universe is the best account and apology for many of them. He shared also the subjectiveness of the age, and that too in both the senses I have discriminated. With the sharpest eye for form, color, botany, engraving, medals, persons and manners, he never stopped at surface, but pierced the purpose of a thing and studied to reconcile that purpose with his own being. What he could so reconcile was good; what he could not, was false. Hence a certain greatness encircles every fact he treats; for to him it has a soul, an eternal reason why it was so, and not otherwise. This is the secret of that deep realism, which went about among all objects he beheld, to find the cause why they must be what they are. It was with him a favorite task to find a theory of every institution, custom, art, work of art, which he observed. Witness his explanation of the Italian mode of reckoning the hours of the day, as growing out of the Italian climate; of the obelisk of Egypt, as growing out of a common natural fracture in the granite parallelopiped in Upper Egypt; of the Doric architecture, and the Gothic; of the Venetian music of the gondolier, originating in the habit of the fishers' wives of the Lido singing on shore to their husbands on the sea; of the amphitheatre, which is the enclosure of the natural cup of heads that arranges itself round every spectacle in the street; of the coloring of Titian and Paul Veronese, which one may verify in common daylight in Venice every afternoon; of the Carnival at Rome; of the domestic rural architecture in Italy; and many the like examples.

¶ But also that other vicious subjectiveness, that vice of the time, infected him also. We are provoked with his Olympian self-complacency, the patronizing air with which he vouchsafes to tolerate the genius and performances of other mortals, "the good Hiller," "our excellent Kant," "the friendly Wieland," etc. There is a good letter from Wieland to Merck, in which Wieland relates that Goethe read to a select party his journal of a tour in Switzerland with the Grand Duke, and their passage through the Vallais and over the St. Gothard. "It was," says Wieland, "as good as Xenophon's Anabasis. The piece is one of the most masterly productions, and is thought and written with the greatness peculiar to him. The fair hearers were enthusiastic at the nature in this piece; I liked the sly art in the composition, whereof they saw nothing, still better. It is a true poem, so concealed is the art too. But what most remarkably in this, as in all his other works, distinguishes him from Homer and Shakspeare is that the Me, the *Ille ego*, everywhere glimmers through, although without any boasting and with an infinite fineness." This subtle element of egotism in Goethe certainly does not seem to deform his compositions, but to lower the moral influence of the man. He differs from all the great in the total want of frankness. Who saw Milton, who saw Shakspeare, saw them do their best, and utter their whole heart manlike among their brethren. No man was permitted to call Goethe brother. He hid himself, and worked always to astonish, which is egotism, and therefore little.

¶ If we try Goethe by the ordinary canons of criticism, we should say that his thinking is of great altitude, and all level; not a succession of summits, but a high Asiatic table-land. Dramatic power, the rarest talent in literature, he has very little. He has an eye constant to the fact of life and that never pauses in its advance. But the great felicities,

the miracles of poetry, he has never. It is all design with him, just thought and instructed expression, analogies, allusion, illustration, which knowledge and correct thinking supply; but of Shakspeare and the transcendent muse, no syllable. Yet in the court and law to which we ordinarily speak, and without adverting to absolute standards, we claim for him the praise of truth, of fidelity to his intellectual nature. He is the king of all scholars. In these days and in this country, where the scholars are few and idle, where men read easy books and sleep after dinner, it seems as if no book could so safely be put in the hands of young men as the letters of Goethe, which attest the incessant activity of this man, to eighty years, in an endless variety of studies, with uniform cheerfulness and greatness of mind. They cannot be read without shaming us into an emulating industry. Let him have the praise of the love of truth. We think, when we contemplate the stupendous glory of the world, that it were life enough for one man merely to lift his hands and cry with Saint Augustine, "Wrangle who pleases, I will wonder." Well, this he did. Here was a man who, in the feeling that the thing itself was so admirable as to leave all comment behind, went up and down, from object to object, lifting the veil from every one, and did no more. What he said of Lavater, may truelier be said of him, that "it was fearful to stand in the presence of one before whom all the boundaries within which Nature has circumscribed our being were laid flat." His are the bright and terrible eyes which meet the modern student in every sacred chapel of thought, in every public enclosure.

¶ But now, that we may not seem to dodge the question which all men ask, nor pay a great man so ill a compliment as to praise him only in the conventional and comparative speech, let us honestly record our thought upon the total worth and influence of this genius. Does he represent, not only the achievement of that age in which he lived, but that which it would be and is now becoming? And what shall we think of that absence of the moral sentiment, that singular equivalence to him of good and evil in action, which discredit his compositions to the pure? The spirit of his biography, of his poems, of his tales, is identical, and we may here set down by way of comment of his genius the impressions recently awakened in us by the story of Wilhelm Meister.

¶ All great men have written proudly, nor cared to explain. They knew that the intelligent reader would come at last, and would thank them. So did Dante, so did Macchiavel. Goethe has done this in Meister. We can fancy him saying to himself: "There are poets enough of the Ideal; let me paint the Actual, as, after years of dreams, it will still appear and reappear to wise men. That all shall right itself in the long Morrow, I may well allow, and my novel may wait for the same regeneration. The age, that can damn it as false and falsifying, will see that it is deeply one with the genius and history of all the centuries. I have given my characters a bias to error. Men have the same. I have let mischance befall instead of good fortune. They do so daily. And out of many vices and misfortunes, I have let a great success grow, as I had known in my own and many other examples. Fierce churchmen and effeminate aspirants will chide and hate my name, but every keen beholder of life will justify my truth, and will acquit me of prejudging the cause of humanity by painting it with this morose fidelity. To a profound soul is not austere truth the sweetest flattery?"

¶ Yes, O Goethe! but the ideal is truer than the actual. That is ephemeral, but this changes not. Moreover, because Nature is moral, that mind only can see, in which the same order entirely obtains. An interchangeable Truth, Beauty and Goodness, each wholly interfused in the other, must make the humors of that eye which would see causes reaching to their last effect and reproducing the world forever. The least inequality of mixture, the excess of one element over

the other, in that degree diminishes the transparency of things, makes the world opaque to the observer, and destroys so far the value of his experience. No particular gifts can countervail this defect. In reading Meister, I am charmed with the insight; to use a phrase of Ben Jonson's, "it is rammed with life." I find there actual men and women even too faithfully painted. I am moreover instructed in the possibility of a highly accomplished society, and taught to look for great talent and culture under a gray coat. But this is all. The limits of artificial society are never quite out of sight. The vicious conventions, which hem us in like prison walls and which the poet should explode at his touch, stand for all they are worth in the newspaper. We are never lifted above ourselves, we are not transported out of the dominion of the senses, or cheered with an infinite tenderness, or armed with a grand trust. ¶ Goethe, then, must be set down as the poet of the Actual, not of the Ideal; the poet of limitation, not of possibility; of this world, and not of religion and hope; in short, if we may say so, the poet of prose, and not of poetry. He accepts the base doctrine of Fate, and gleans what straggling joys may yet remain out of its ban. He is like a banker or a weaver with a passion for the country; he steals out of the hot streets before sunrise, or after sunset, or on a rare holiday, to get a draft of sweet air and a gaze at the magnificence of summer, but dares not break from his slavery and lead a man's life in a man's relation to Nature. In that which should be his own place, he feels like a truant, and is scourged back presently to his task and his cell. Poetry is with Goethe thus external, the gilding of the chain, the mitigation of his fate; but the Muse never assays those thunder-tones which cause to vibrate the sun and the moon, which dissipate by dreadful melody all this iron network of circumstance, and abolish the old heavens and the old earth before the free will or Godhead of man. That Goethe had not a moral perception proportionate to his other powers is not, then, merely a circumstance, as we might relate of a man that he had or had not the sense of tune or an eye for colors, but it is the cardinal fact of health or disease; since, lacking this, he failed in the high sense to be a creator, and, with divine endowments, drops by irreversible decree into the common history of genius. He was content to fall into the track of vulgar poets and spend on common aims his splendid endowments, and has declined the office proffered to now and then a man in many centuries in the power of his genius, of a Redeemer of the human mind. He has written better than other poets only as his talent was subtler, but the ambition of creation he refused. Life for him is prettier, easier, wiser, decenter, has a gem or two more on its robe, but its old eternal burden is not relieved; no drop of healthier blood flows yet in its veins. Let him pass. Humanity must wait for its physician still at the side of the road, and confess as this man goes out that they have served it better, who assured it out of the innocent hope in their hearts that a Physician will come, than this majestic Artist, with all the treasuries of wit, of science, and of power at his command.

¶ The criticism, which is not so much spoken as felt in reference to Goethe, instructs us directly in the hope of literature. We feel that a man gifted like him should not leave the world as he found it. It is true, though somewhat sad, that every fine genius teaches us how to blame himself. Being so much, we cannot forgive him for not being more. When one of these grand monads is incarnated whom Nature seems to design for eternal men and draw to her bosom, we think that the old weariness of Europe and Asia, the trivial forms of daily life will now end, and a new morning break on us all. What is Austria? What is England? What is our graduated and petrified social scale of ranks and employments? Shall not a poet redeem us from these idolatries, and pale their legendary lustre before the fires of the Divine Wisdom which burn in his heart? All that in our sov-

ereign moments each of us has divined of the powers of thought, all the hints of omnipresence and energy, which we have caught, this man should unfold, and constitute facts.

¶ And this is the insatiable craving which alternately saddens and gladdens men at this day. The Doctrine of the Life of Man established after the truth through all his faculties;—this is the thought which the literature of this hour meditates and labors to say. This is that which tunes the tongue and fires the eye and sits in the silence of the youth. Verily it will not long want articulate and melodious expression. There is nothing in the heart but comes presently to the lips. The very depth of the sentiment, which is the author of all the cutaneous life we see, is guarantee for the riches of science and of song in the age to come. He who doubts whether this age or this country can yield any contribution to the literature of the world only betrays his own blindness to the necessities of the human soul. Has the power of poetry ceased, or the need? Have the eyes ceased to see that which they would have, and which they have not? Have they ceased to see other eyes? Are there no lonely, anxious, wondering children, who must tell their tale? Are we not evermore whipped by thoughts?

> "In sorrow steeped, and steeped in love
> Of thoughts not yet incarnated."

The heart beats in this age as of old, and the passions are busy as ever. Nature has not lost one ringlet of her beauty, one impulse of resistance and valor. From the necessity of loving none are exempt, and he that loves must utter his desires. A charm as radiant as beauty ever beamed, a love that fainteth at the sight of its object, is new to-day.

> "The world does not run smoother than of old,
> There are sad haps that must be told."

Man is not so far lost but that he suffers ever the great Discontent which is the elegy of his loss and the prediction of his recovery. In the gay saloon he laments that these figures are not what Raphael and Guercino painted. Withered though he stand, and trifler though he be, the august spirit of the world looks out from his eyes. In his heart he knows the ache of spiritual pain, and his thought can animate the sea and land. What, then, shall hinder the Genius of the time from speaking its thought? It cannot be silent, if it would. It will write in a higher spirit and a wider knowledge and with a grander practical aim than ever yet guided the pen of poet. It will write the annals of a changed world, and record the descent of principles into practice, of love into Government, of love into Trade. It will describe the new heroic life of man, the now unbelieved possibility of simple living and of clean and noble relations with men. Religion will bind again these that were sometime frivolous, customary, enemies, skeptics, self-seekers, into a joyful reverence for the circumambient Whole, and that which was ecstasy shall become daily bread.

Walter Savage Landor

WE sometimes meet in a stage-coach in New England an erect, muscular man, with fresh complexion and a smooth hat, whose nervous speech instantly betrays the English traveller; —a man nowise cautious to conceal his name or that of his native country, or his very slight esteem for the persons and the country that surround him. When Mr. Bull rides in an American coach, he speaks quick and strong; he is very ready to confess his ignorance of everything about him,—persons, manners, customs, politics, geography. He wonders that the Americans should build with wood, whilst all this stone is lying in the roadside; and is astonished to learn that a wooden house may last a hundred years; nor will he remember the fact as many minutes after it has been told him: he wonders that they do not make elder-wine and cherry-bounce, since here are cherries, and every mile is crammed with elder-bushes. He has never seen a good horse in America, nor a good coach, nor a good inn. Here is very good earth and water and plenty

of them; that he is free to allow; to all other gifts of Nature or man his eyes are sealed by the inexorable demand for the precise conveniences to which he is accustomed in England. Add to this proud blindness the better quality of great downrightness in speaking the truth, and the love of fair play, on all occasions, and moreover the peculiarity which is alleged of the Englishman, that his virtues do not come out until he quarrels.

¶ Transfer these traits to a very elegant and accomplished mind, and we shall have no bad picture of Walter Savage Landor, who may stand as a favorable impersonation of the genius of his countrymen at the present day. A sharp, dogmatic man, with a great deal of knowledge, a great deal of worth, and a great deal of pride; with a profound contempt for all that he does not understand; a master of all elegant learning, and capable of the utmost delicacy of sentiment, and yet prone to indulge a sort of ostentation of coarse imagery and language. His partialities and dislikes are by no means culpable, but are often whimsical and amusing; yet they are quite sincere, and, like those of Johnson and Coleridge, are easily separable from the man. What he says of Wordsworth is true of himself, that he delights to throw a clod of dirt on the table, and cry, "Gentlemen, there is a better man than all of you." Bolivar, Mina and General Jackson will never be greater soldiers than Napoleon and Alexander, let Mr. Landor think as he will; nor will he persuade us to burn Plato and Xenophon, out of our admiration of Bishop Patrick, or Lucas on Happiness, or Lucas on Holiness, or even Barrow's Sermons. Yet a man may love a paradox without either losing his wit or his honesty. A less pardonable eccentricity is the cold and gratuitous obtrusion of licentious images, not so much the suggestion of merriment as of bitterness. Montaigne assigns as a reason for his license of speech that he is tired of seeing his Essays on the work-tables of ladies, and he is determined they shall for the future put them out of sight. In Mr. Landor's coarseness there is a certain air of defiance, and the rude word seems sometimes to arise from a disgust at niceness and over-refinement. Before a well-dressed company he plunges his fingers into a cesspool, as if to expose the whiteness of his hands and the jewels of his ring. Afterward, he washes them in water, he washes them in wine; but you are never secure from his freaks. A sort of Earl Peterborough in literature, his eccentricity is too decided not to have diminished his greatness. He has capital enough to have furnished the brain of fifty stock authors, yet has written no book.

LANDOR is one of the foremost of that small class who make good in the nineteenth century the claims of pure literature. In these busy days of avarice and ambition, a faithful scholar, receiving from past ages the treasures of wit and enlarging them by his own love, is a friend and consoler of mankind.

¶ But we have spoken all our discontent. Possibly his writings are open to harsher censure; but we love the man, from sympathy as well as for reasons to be assigned; and have no wish, if we were able, to put an argument in the mouth of his critics. Now for twenty years we have still found the Imaginary Conversations a sure resource in solitude, and it seems to us as original in its form as in its matter. Nay, when we remember his rich and ample page, wherein we are always sure to find free and sustained thought, a keen and precise understanding, an affluent and ready memory familiar with all chosen books, an industrious observation in every department of life, an experience to which

nothing has occurred in vain, honor for every just and generous sentiment and a scourge like that of Furies for every oppressor, whether public or private,—we feel how dignified is this perpetual Censor in his curule chair, and we wish to thank a benefactor of the reading world.

¶ Mr. Landor is one of the foremost of that small class who make good in the nineteenth century the claims of pure literature. In these busy days of avarice and ambition, when there is so little disposition to profound thought or to any but the most superficial intellectual entertainments, a faithful scholar, receiving from past ages the treasures of wit and enlarging them by his own love, is a friend and consoler of mankind. When we pronounce the names of Homer and Æschylus; Horace, Ovid and Plutarch; Erasmus, Scaliger and Montaigne; Ben Jonson and Isaak Walton; Dryden and Pope,—we pass at once out of trivial associations and enter into a region of the purest pleasure accessible to human nature. We have quitted all beneath the moon and entered that crystal sphere in which everything in the world of matter reappears, but transfigured and immortal. Literature is the effort of man to indemnify himself for the wrongs of his condition. The existence of the poorest playwright and the humblest scrivener is a good omen. A charm attaches to the most inferior names which have in any manner got themselves enrolled in the registers of the House of Fame, even as porters and grooms in the courts; to Creech and Fenton, Theobald and Dennis, Aubrey and Spence. From the moment of entering a library and opening a desired book, we cease to be citizens, creditors, debtors, housekeepers and men of care and fear. What boundless leisure! what original jurisdiction! the old constellations have set, new and brighter have arisen; an Elysian light tinges all objects:—

> "In the afternoon we came unto a land
> In which it seemed always afternoon."

¶ And this sweet asylum of an intellectual life must appear to have the sanction of Nature, as long as so many men are born with so decided an aptitude for reading and writing. Let us thankfully allow every faculty and art which opens new scope to a life so confined as ours. There are vast spaces in a thought: a slave, to whom the religious sentiment is opened, has a freedom which makes his master's freedom a slavery. Let us not be so illiberal with our schemes for the renovation of society and Nature as to disesteem or deny the literary spirit. Certainly there are heights in Nature which command this; there are many more which this commands. It is vain to call it a luxury, and as saints and reformers are apt to do, decry it as a species of day-dreaming. What else are sanctities, and reforms, and all other things? Whatever can make for itself an element, means, organs, servants and the most profound and permanent existence in the hearts and heads of millions of men, must have a reason for its being. Its excellency is reason and vindication enough. If rhyme rejoices us, there should be rhyme, as much as if fire cheers us, we should bring wood and coals. Each kind of excellence takes place for its hour and excludes everything else. Do not brag of your actions, as if they were better than Homer's verses or Raphael's pictures. Raphael and Homer feel that

LANDOR exercises with a grandeur of spirit the office of writer, and carries it with an air of old and unquestionable nobility. We do not recollect an example of more complete independence in literary history.

action is pitiful beside their enchantments. They could act too, if the stake was worthy of them: but now all that is good in the universe urges them to their task. Whoever writes for the love of truth and beauty, and not with ulterior ends, belongs to this sacred class; and among these, few men of the present age have a better claim to be numbered than Mr. Landor. Wherever genius or taste has existed, wherever freedom and justice are threatened, which he values as the element in which genius may work, his interest is sure to be commanded. His love of beauty is passionate, and betrays itself in all petulant and contemptuous expressions.

¶ But beyond his delight in genius and his love of individual and civil liberty, Mr. Landor has a perception that is much more rare, the appreciation of character. This is the more remarkable considered with his intense nationality, to which we have already alluded. He is buttoned in English broadcloth to the chin. He hates the Austrians, the Italians, the French, the Scotch and the Irish. He has the common prejudices of an English landholder; values his pedigree, his acres and the syllables of his name; loves all his advantages, is not insensible to the beauty of his watch-seal, or the Turk's head on his umbrella; yet with all this miscellaneous pride there is a noble nature within him which instructs him that he is so rich that he can well spare all his trappings, and, leaving to others the painting of circumstance, aspire to the office of delineating character. He draws his own portrait in the costume of a village schoolmaster, and a sailor, and serenely enjoys the victory of Nature over fortune. Not only the elaborated story of Normanby, but the whimsical selection of his heads proves this taste. He draws with evident pleasure the portrait of a man who never said anything right and never did anything wrong. But in the character of Pericles he has found full play for beauty and greatness of behavior, where the circumstances are in harmony with the man. These portraits, though mere sketches, must be valued as attempts in the very highest kind of narrative, which not only has very few examples to exhibit of any success, but very few competitors in the attempt. The word Character is in all mouths; it is a force which we all feel; yet who has analyzed it? What is the nature of that subtle and majestic principle which attaches us to a few persons, not so much by personal as by the most spiritual ties? What is the quality of the persons who, without being public men, or literary men, or rich men, or active men, or (in the popular sense) religious men, have a certain salutary omnipresence in all our life's history, almost giving their own quality to the atmosphere and the landscape? A moral force, yet wholly unmindful of creed and catechism, intellectual, but scornful of books, it works directly and without means, and though it may be resisted at any time, yet resistance to it is a suicide. For the person who stands in this lofty relation to his fellow men is always the impersonation to them of their conscience. It is a sufficient proof of the extreme delicacy of this element, evanescing before any but the most sympathetic vision, that it has so seldom been employed in the drama and in novels. Mr. Landor, almost alone among living English writers, has indicated his perception of it.

¶ These merits make Mr. Landor's position in the republic of letters one of great mark and dignity. He exercises with a grandeur of spirit the office of writer, and carries it with an air of old and unquestionable nobility. We do not recollect an example of more complete independence in literary history. He has no clanship, no friendships that warp him. He was one of the first to pronounce Wordsworth the great poet of the age, yet he discriminates his faults with the greater freedom. He loves Pindar, Æschylus, Euripides, Aristophanes, Demosthenes, Virgil, yet with open eyes. His position is by no means the highest in literature: he is not a poet or a philosopher. He is a man full of thoughts, but not, like Coleridge, a man of ideas. Only from a mind conversant

with the First Philosophy can definitions be expected. Coleridge has contributed many valuable ones to modern literature. Mr. Landor's definitions are only enumerations of particulars; the generic law is not seized. But as it is not from the highest Alps or Andes but from less elevated summits that the most attractive landscape is commanded, so is Mr. Landor the most useful and agreeable of critics. He has commented on a wide variety of writers, with a closeness and extent of view which has enhanced the value of those authors to his readers. His Dialogue on the Epicurean philosophy is a theory of the genius of Epicurus. The Dialogue between Barrow and Newton is the best of all criticisms on the essays of Bacon. His picture of Demosthenes in three several Dialogues is new and adequate. He has illustrated the genius of Homer, Æschylus, Pindar, Euripides, Thucydides. Then he has examined before he has expatiated, and the minuteness of his verbal criticism gives a confidence in his fidelity when he speaks the language of meditation or of passion. His acquaintance with the English tongue is unsurpassed. He "hates false words, and seeks with care, difficulty and moroseness those that fit the thing." He knows the value of his own words. "They are not," he says, "written on slate." He never stoops to explanation, nor uses seven words where one will do. He is a master of condensation and suppression, and that in no vulgar way. He knows the wide difference between compression and an obscure elliptical style. The dense writer has yet ample room and choice of phrase, and even a gamesome mood often between his valid words. There is no inadequacy or disagreeable contraction in his sentence, any more than in a human face, where in a square space of a few inches is found room for every possible variety of expression.

¶ Yet it is not as an artist that Mr. Landor commends himself to us. He is not epic or dramatic, he has not the high, overpowering method by which the master gives unity and integrity to a work of many parts. He is too wilful, and never abandons himself to his genius. His books are a strange mixture of politics, etymology, allegory, sentiment, and personal history; and what skill of transition he may possess is superficial, not spiritual. His merit must rest, at last, not on the spirit of the dialogue or the symmetry of any of his historical portraits, but on the value of his sentences. Many of these will secure their own immortality in English literature; and this, rightly considered, is no mean merit. These are not plants and animals, but the genetical atoms of which both are composed. All our great debt to the Oriental world is of this kind, not utensils and statues of the precious metal, but bullion and gold-dust. Of many of Mr. Landor's sentences we are fain to remember what was said of those of Socrates; that they are cubes, which will stand firm, place them how or where you will.

Prayers

PYTHAGORAS said that the time when men are honestest is when they present themselves before the gods. If we can overhear the prayer we shall know the man. But prayers are not made to be overheard, or to be printed, so that we seldom have the prayer otherwise than it can be inferred from the man and his fortunes, which are the answer to the prayer, and always accord with it. Yet there are scattered about in the earth a few records of these devout hours, which it would edify us to read, could they be collected in a more catholic spirit than the wretched and repulsive volumes which usurp that name. Let us not have the prayers of one sect, nor of the Christian Church, but of men in all ages and religions who have prayed well. The prayer of Jesus is (as it deserves) become a form for the human race. Many men have contributed a single expression, a single word to the language of devotion, which is immediately caught and stereotyped in the prayers of their church and nation. Among the remains of Euripides we have this prayer:

"Thou God of all! infuse light into the souls of men, whereby they may be enabled to know what is the root from whence all their evils spring, and by what means they may avoid them." In the Phædrus of Plato, we find this petition in the mouth of Socrates: "O gracious Pan! and ye other gods who preside over this place! grant that I may be beautiful within; and that those external things which I have may be such as may best agree with a right internal disposition of mine; and that I may account him to be rich, who is wise and just." Wacic the Caliph, who died A. D. 845, ended his life, the Arabian historians tell us, with these words: "O thou whose kingdom never passes away, pity one whose dignity is so transient." But what led us to these remembrances was the happy accident which in this undevout age lately brought us acquainted with two or three diaries, which attest, if there be need of attestation, the eternity of the sentiment and its equality to itself through all the variety of expression. The first is the prayer of a deaf and dumb boy:—

¶ "When my long-attached friend comes to me, I have pleasure to converse with him, and I rejoice to pass my eyes over his countenance; but soon I am weary of spending my time causelessly and unimproved, and I desire to leave him (but not in rudeness), because I wished to be engaged in my business. But thou, O my Father, knowest I always delight to commune with thee in my lone and silent heart; I am never full of thee; I am never weary of thee; I am always desiring thee. I hunger with strong hope and affection for thee, and I thirst for thy grace and spirit.

¶ "When I go to visit my friends, I must put on my best garments, and I must think of my manner to please them. I am tired to stay long, because my mind is not free, and they sometimes talk gossip with me. But O my Father, thou visitest me in my work, and I can lift up my desires to thee, and my heart is cheered and at rest with thy presence, and I am always alone with thee, and thou dost not steal my time by foolishness. I always ask in my heart, where can I find thee?"

¶ The next is a voice out of a solitude as strict and sacred as that in which Nature had isolated this eloquent mute:—

¶ "My Father, when I cannot be cheerful or happy, I can be true and obedient, and I will not forget that joy has been, and may still be. If there is no hour of solitude granted me, still I will commune with thee. If I may not search out and pierce thy thought, so much the more may my living praise thee. At whatever price, I must be alone with thee; this must be the demand I make. These duties are not the life, but the means which enable us to show forth the life. So must I take up this cross, and bear it willingly. Why should I feel reproved when a busy one enters the room? I am not idle, though I sit with folded hands, but instantly I must seek some cover. For that shame I reprove myself. Are they only the valuable members of society who labor to dress and feed it? Shall we never ask the aim of all this hurry and foam, of this aimless activity? Let the purpose for which I live be always before me; let every thought and word go to confirm and illuminate that end; namely, that I must become near and dear to thee; that now I am beyond the reach of all but thee.

¶ "How can we not be reconciled to thy will? I will know the joy of giving to my friend the dearest treasure I have. I know that sorrow comes not at once only. We cannot meet it and say, now it is overcome, but again, and yet again, its flood pours over us, and as full as at first.

> "If but this tedious battle could be fought,
> Like Sparta's heroes at one rocky pass,
> 'One day be spent in dying,' men had sought
> The spot, and been cut down like mower's grass."

¶ The next is in a metrical form. It is the aspiration of a different mind, in quite other regions of power and duty, yet they all accord at last.

"Great God, I ask thee for no meaner pelf
Than that I may not disappoint myself,
That in my action I may soar as high,
As I can now discern with this clear eye.

And next in value, which thy kindness lends,
That I may greatly disappoint my friends,
Howe'er they think or hope that it may be,
They may not dream how thou 'st distinguished me.

That my weak hand
may equal my firm
faith,
And my life practise
more than my
tongue saith;
That my low conduct
may not show.
Nor my relenting
lines,
That I thy purpose
did not know,
Or overrated thy designs."

IF we can overhear the prayer we shall KNOW THE MAN.

¶ The last of the four orisons is written in a singularly calm and healthful spirit, and contains this petition:—

¶ "My Father: I now come to thee with a desire to thank thee for the continuance of our love, the one for the other. I feel that without thy love in me I should be alone here in the flesh. I cannot express my gratitude for what thou hast been and continuest to be to me. But thou knowest what my feelings are. When nought on earth seemeth pleasant to me, thou dost make thyself known to me, and teach that which is needful for me, and dost cheer my travels on. I know that thou hast not created me and placed me here on earth, amidst its toils and troubles and the follies of those around me, and told me to be like thyself when I see so little of thee here to profit by; thou hast not done this, and then left me here to myself, a poor, weak man, scarcely able to earn my bread. No; thou art my Father and I will love thee, for thou didst first love me, and lovest me still. We will ever be parent and child. Wilt thou give me strength to persevere in this great work of redemption. Wilt thou show me the true means of accomplishing it. . . . I thank thee for the knowledge that I have attained of thee by thy sons who have been before me, and especially for him who brought me so perfect a type of thy goodness and love to men. . . . I know that thou wilt deal with me as I deserve. I place myself therefore in thy hand, knowing that thou wilt keep me from harm so long as I consent to live under thy protecting care."

¶ Let these few scattered leaves, which a chance (as men say, but which to us shall be holy) brought under our eye nearly at the same moment, stand as an example of innumerable similar expressions which no mortal witness has reported, and be a sign of the times. Might they be suggestion to many a heart of yet higher secret experiences which are ineffable! But we must not tie up the rosary on which we have strung these few white beads, without adding a pearl of great price from that book of prayer, the Confessions of Saint Augustine.

¶ "And being admonished to reflect upon myself, I entered into the very inward parts of my soul, by thy conduct; and I was able to do it, because now thou wert become my helper. I entered and discerned with the eye of my soul (such as it was), even beyond my soul and mind itself, the Light unchangeable. Not this vulgar light which all flesh may look upon, nor as it were a greater of the same kind, as though the brightness of this should be manifold greater and with its greatness take up all space. Not such was this light, but other, yea, far other from all these. Neither was it so above my understanding, as oil swims above water, or as the

heaven is above the earth. But it is above me, because it made me; and I am under it, because I was made by it. He that knows truth or verity knows what that light is, and he that knows it knows eternity, and it is known by charity. O eternal Verity! and true Charity! and dear Eternity! thou art my God, to thee do I sigh day and night. Thee when I first knew, thou liftedst me up that I might see, there was what I might see, and that I was not yet such as to see. And thou didst beat back my weak sight upon myself, shooting out beams upon me after a vehement manner; and I even trembled between love and horror, and I found myself to be far off, and even in the very region of dissimilitude from thee."

Agriculture of Massachusetts

ON an afternoon in April, after a long walk, I traversed an orchard where boys were grafting apple-trees, and found the farmer in his cornfield. He was holding the plough, and his son driving the oxen. This man always impresses me with respect, he is so manly, so sweet-tempered, so faithful, so disdainful of all appearances; excellent and reverable in his old weather-worn cap and blue frock bedaubed with the soil of the field; so honest withal that he always needs to be watched lest he should cheat himself. I still remember with some shame that in some dealing we had together a long time ago, I found that he had been looking to my interest in the affair, and I had been looking to my interest, and nobody had looked to his part. As I drew near this brave laborer in the midst of his own acres, I could not help feeling for him the highest respect. Here is the Cæsar, the Alexander of the soil, conquering and to conquer, after how many and many a hard-fought summer's day and winter's day; not like Napoleon, hero of sixty battles only, but of six thousand, and out of every one he has come victor; and here he stands, with Atlantic strength and cheer, invincible still. These slight and useless city limbs of ours will come to shame before this strong soldier, for his have done his own work and ours too. What good this man has or has had, he has earned. No rich father or father-in-law left him any inheritance of land or money. He borrowed the money with which he bought his farm, and has bred up a large family, given them a good education, and improved his land in every way year by year, and this without prejudice to himself the landlord, for here he is, a man every inch of him, and reminds us of the hero of the Robin Hood ballad,—

> "Much, the miller's son
> There was no inch of his body,
> But it was worth a groom."

¶ Innocence and justice have written their names on his brow. Toil has not broken his spirit. His laugh rings with the sweetness and hilarity of a child; yet he is a man of a strongly intellectual taste, of much reading, and of an erect good sense and independent spirit which can neither brook usurpation nor falsehood in any shape. I walked up and down the field, as he ploughed his furrow, and we talked as we walked. Our conversation naturally turned on the season and its new labors. He had been reading the report of the Agricultural Survey of the Commonwealth, and had found good things in it; but it was easy to see that he felt toward the author much as soldiers do toward the historiographer who follows the camp, more good nature than reverence for the gownsman.

¶ The First Report, he said, is better than the last, as I observe the first sermon of a minister is often his best, for every man has one thing which he specially wishes to say, and that comes out at first. But who is this book written for? Not for farmers; no pains are taken to send it to them; it was by accident that this volume came into my hands for a few days. And it is not for them. They could not afford to follow such advice as is given here; they have sterner teachers; their own business teaches them better. No; this was writ-

ten for the literary men. But in that case, the state should not be taxed to pay for it. Let us see. The account of the maple sugar,—that is very good and entertaining, and, I suppose, true. The story of the farmer's daughter, whom education had spoiled for everything useful on a farm—that is good, too, and we have much that is like it in Thomas's Almanack. But why this recommendation of stone houses? They are not so cheap, not so dry, and not so fit for us. Our roads are always changing their direction, and after a man has built at great cost a stone house, a new road is opened, and he finds himself a mile or two from the highway. Then our people are not stationary, like those of old countries, but always alert to better themselves, and will remove from town to town as a new market opens or a better farm is to be had, and do not wish to spend too much on their buildings.

¶ The Commissioner advises the farmers to sell their cattle and their hay in the fall, and buy again in the spring. But we farmers always know what our interest dictates, and do accordingly. We have no choice in this matter; our way is but too plain. Down below, where manure is cheap and hay dear, they will sell their oxen in November; but for me to sell my cattle and my produce in the fall would be to sell my farm, for I should have no manure to renew a crop in the spring. And thus Necessity farms it; necessity finds out when to go to Brighton, and when to feed in the stall, better than Mr. Colman can tell us.

¶ But especially observe what is said throughout these Reports of the model farms and model farmers. One would think that Mr. D. and Major S. were the pillars of the Commonwealth. The good Commissioner takes off his hat when he approaches them, distrusts the value of "his feeble praise," and repeats his compliments as often as their names are introduced. And yet, in my opinion, Mr. D., with all his knowledge and present skill, would starve in two years on any one of fifty poor farms in this neighborhood on each of which now a farmer manages to get a good living. Mr. D. inherited a farm, and spends on it every year from other resources; otherwise his farm had ruined him long since;—and as for the Major, he never got rich by his skill in making land produce, but in making men produce. The truth is, a farm will not make an honest man rich in money. I do not know of a single instance in which a man has honestly got rich by farming alone. It cannot be done. The way in which men who have farms grow rich is either by other resources, or by trade, or by getting their labor for nothing, or by other methods of which I could tell you many sad anecdotes. What does the Agricultural Surveyor know of all this? What can he know? He is the victim of the Reports that are sent him, of particular farms. He cannot go behind the estimates to know how the contracts were made, and how the sales were effected. The true men of skill, the poor farmers, who, by the sweat of their face, without an inheritance and without offence to their conscience have reared a family of valuable citizens and matrons to the state, reduced a stubborn soil to a good farm, although their buildings are many of them shabby, are the only right subjects of this Report; yet these make no figure in it. These should be holden up to imitation, and their methods detailed; yet their houses are very uninviting and inconspicuous to State Commissioners. So with these premiums to farms, and premiums at cattle-shows. The class that I describe must pay the premium which is awarded to the rich. Yet the premium obviously ought to be given for the good management of a poor farm.

¶ In this strain the Farmer proceeded, adding many special criticisms. He had a good opinion of the Surveyor, and acquitted him of any blame in the matter, but was incorrigible in his skepticism concerning the benefits conferred by legislatures on the agriculture of Massachusetts.

¶ I believe that my friend is a little stiff and inconvertible in his own opin-

ions, and that there is another side to be heard; but so much wisdom seemed to lie under all his statement that it deserved a record.

Europe and European Books

IT was a brighter day than we have often known in our literary calendar, when within a twelvemonth a single London advertisement announced a new volume of poems by Wordsworth, poems by Tennyson, and a play by Henry Taylor. Wordsworth's nature or character has had all the time it needed in order to make its mark and supply the want of talent. We have learned how to read him. We have ceased to expect that which he cannot give. He has the merit of just moral perception, but not that of deft poetic execution. How would Milton curl his lip at such slip-shod newspaper style. Many of his poems, as for example the Rylstone Doe, might be all improvised. Nothing of Milton, nothing of Marvell, of Herbert, of Dryden, could be. These are such verses as in a just state of culture should be *vers de société*, such as every gentleman could write but none would think of printing, or of claiming the poet's laurel on their merit. The Pindar, the Shakspeare, the Dante, whilst they have the just and open soul, have also the eye to see the dimmest star that glimmers in the Milky Way, the serratures of every leaf, the test-objects of the microscope, and then the tongue to utter the same things in words that engrave them on all the ears of mankind. The poet demands all gifts, and not one or two only.

¶ The poet, like the electric rod, must reach from a point nearer the sky than all surrounding objects, down to the earth, and into the dark wet soil, or neither is of use. The poet must not only converse with pure thought, but he must demonstrate it almost to the senses. His words must be pictures, his verses must be spheres and cubes, to be seen and smelled and handled. His fable must be a good story, and its meaning must hold as pure truth. In the debates on the Copyright Bill, in the English Parliament, Mr. Sergeant Wakley, the coroner, quoted Wordsworth's poetry in derision, and asked the roaring House of Commons what that meant, and whether a man should have public reward for writing such stuff. Homer, Horace, Milton and Chaucer would defy the coroner. Whilst they have wisdom to the wise, he would see that to the external they have external meaning. Coleridge excellently said of poetry, that poetry must first be good sense; as a palace might well be magnificent, but first it must be a house.

¶ Wordsworth is open to ridicule of this kind. And yet Wordsworth, though satisfied if he can suggest to a sympathetic mind his own mood, and though setting a private and exaggerated value on his compositions; though confounding his accidental with the universal consciousness, and taking the public to task for not admiring his poetry, is really a master of the English language, and his poems evince a power of diction that is no more rivalled by his contemporaries than is his poetic insight. But the capital merit of Wordsworth is that he has done more for the sanity of this generation than any other writer. Early in life, at a crisis it is said in his private affairs, he made his election between assuming and defending some legal rights, with the chances of wealth and a position in the world, and the inward promptings of his heavenly genius; he took his part; he accepted the call to be a poet, and sat down, far from cities, with coarse clothing and plain fare to obey the heavenly vision. The choice he had made in his will manifested itself in every line to be real. We have poets who write the poetry of society, of the patrician and conventional Europe, as Scott and Moore, and others who, like Byron or Bulwer, write the poetry of vice and disease. But Wordsworth threw himself into his place, made no reserves or stipulations; man and writer were not to be divided. He sat at the foot of Helvellyn and on the margin of Windermere, and took their lustrous mornings and their sublime

midnights for his theme, and not Marlowe nor Massinger, not Horace nor Milton nor Dante. He once for all forsook the styles and standards and modes of thinking of London and Paris, and the books read there and the aims pursued, and wrote Helvellyn and Windermere and the dim spirits which these haunts harbored. There was not the least attempt to reconcile these with the spirit and fashion and selfishness, nor to show, with great deference to the superior judgment of dukes and earls, that although London was the home for men of great parts, yet Westmoreland had these consolations for such as fate had condemned to the country life,—but with a complete satisfaction be pitied and rebuked their false lives, and celebrated his own with the religion of a true priest. Hence the antagonism which was immediately felt between his poetry and the spirit of the age, that here not only criticism but conscience and will were parties; the spirit of literature and the modes of living and the conventional theories of the conduct of life were called in question on wholly new grounds,—not from Platonism, not from Christianity, but from the lessons which the country muse taught a stout pedestrian climbing a mountain and following a river from its parent rill down to the sea. The Cannings and Jeffreys of the capital, the Court Journals and Literary Gazettes were not well pleased, and voted the poet a bore. But that which rose in him so high as to the lips, rose in many others as high as to the heart. What he said, they were prepared to hear and confirm. The influence was in the air, and was wafted up and down into lone and into populous places, resisting the popular taste, modifying opinions which it did not change, and soon came to be felt in poetry, in criticism, in plans of life, and at last in legislation. In this country it very early found a stronghold, and its effect may be traced on all the poetry both of England and America.

THE capital merit of Wordsworth is that he has done more for the sanity of this generation than any other writer. He accepted the call to be a poet, and sat down, far from cities, with coarse clothing and plain fare to obey the heavenly vision.

¶ But, notwithstanding all Wordsworth's grand merits, it was a great pleasure to know that Alfred Tennyson's two volumes were coming out in the same ship; it was a great pleasure to receive them. The elegance, the wit and subtlety of this writer, his rich fancy, his power of language, his metrical skill, his independence of any living masters, his peculiar topics, his taste for the costly and gorgeous, discriminate the musky poet of gardens and conservatories, of parks and palaces. Perhaps we felt the popular objection that he wants rude truth; he is too fine. In these boudoirs of damask and alabaster, one is farther off from stern Nature and human life than in Lalla Rookh and the Loves of the Angels. Amid swinging censers and perfumed lamps, amidst velvet and glory, we long for rain and frost. Otto-of-roses is good, but wild air is better. A critical friend of ours affirms that the vice which bereaved modern painters of their power is the ambition to begin where their fathers ended; to equal the masters in their exquisite finish, instead of their religious purpose. The painters are not willing to paint ill enough; they will not paint for their times, agitated by the spirit which agitates their country; so should their picture picture us, and draw all men after them; but they copy the technics of their predecessors, and paint for their predecessors' public. It seems as if the same vice had worked in poetry.

Tennyson's compositions are not so much poems as studies in poetry, or sketches after the styles of sundry old masters. He is not the husband who builds the homestead after his own necessity, from foundation-stone to chimney-top and turret, but a tasteful bachelor who collects quaint staircases and groined ceilings. We have no right to such superfineness. We must not make our bread of pure sugar. These delicacies and splendors are then legitimate when they are the excess of substantial and necessary expenditure. The best songs in English poetry are by that heavy, hard, pedantic poet, Ben Jonson. Jonson is rude, and only on rare occasions gay. Tennyson is always fine, but Jonson's beauty is more grateful than Tennyson's. It is a natural manly grace of a robust workman. Ben's flowers are not in pots at a city florist's, arranged on a flower-stand, but he is a countryman at a harvest-home, attending his ox-cart from the fields, loaded with potatoes and apples, with grapes and plums, with nuts and berries, and stuck with boughs of hemlock and sweetbriar, with ferns and pondlilies which the children have gathered. But let us not quarrel with our benefactors. Perhaps Tennyson is too quaint and elegant. What then? It is long since we have had as good a lyrist; it will be long before we have his superior. Godiva is a noble poem that will tell the legend a thousand years. The poem of all the poetry of the present age for which we predict the longest term is Abou ben Adhem, of Leigh Hunt. Fortune will still have her part in every victory, and it is strange that one of the best poems should be written by a man who has hardly written any other. And Godiva is a parable which belongs to the same gospel. Locksley Hall and The Two Voices are meditative poems, which were slowly written to be slowly read. The Talking Oak, though a little hurt by its wit and ingenuity, is beautiful, and the most poetic of the volume. Ulysses belongs to a high class of poetry, destined to be the highest, and to be more cultivated in the next generation. Œnone was a sketch of the same kind. One of the best specimens we have of the class is Wordsworth's Laodamia, of which no special merit it can possess equals the total merit of having selected such a subject in such a spirit.

TENNYSON'S compositions are not so much poems as studies in poetry, or sketches after the styles of sundry old masters. He is a tasteful bachelor who collects quaint staircases and groined ceilings. We have no right to such superfineness. We must not make our bread of pure sugar.

¶ Next to the poetry, the novels, which come to us in every ship from England, have an importance increased by the immense extension of their circulation through the new cheap press, which sends them to so many willing thousands. We have heard it alleged with some evidence that the prominence given to intellectual power in Bulwer's romances has proved a main stimulus to mental culture in thousands of young men in England and America. The effect on manners cannot be less sensible, and we can easily believe that the behavior of the ballroom and of the hotel has not failed to draw some addition of dignity and grace from the fair ideals with which the imagination of a novelist has filled the heads of the most imitative class.

¶ We are not very well versed in these books, yet we have read Mr. Bulwer enough to see that the story is rapid and interesting; he has really seen London society, and does not draw ignorant caricatures. He is not a genius, but his novels are marked with great energy and with a courage of experiment which

in each instance had its degree of success. The story of Zanoni was one of those world-fables which is so agreeable to the human imagination that it is found in some form in the language of every country, and is always reappearing in literature. Many of the details of this novel preserve a poetic truth. We read Zanoni with pleasure, because magic is natural. It is implied in all superior culture that a complete man would need no auxiliaries to his personal presence. The eye and the word are certainly far subtler and stronger weapons than either money or knives. Whoever looked on the hero would consent to his will, being certified that his aims were universal, not selfish; and he would be obeyed as naturally as the rain and the sunshine are. For this reason, children delight in fairy tales. Nature is described in them as the servant of man, which they feel ought to be true. But Zanoni pains us and the author loses our respect, because he speedily betrays that he does not see the true limitations of the charm; because the power with which his hero is armed is a toy, inasmuch as the power does not flow from its legitimate fountains in the mind, is a power for London; a divine power converted into a burglar's false key or a highwayman's pistol to rob and kill with.

¶ But Mr. Bulwer's recent stories have given us who do not read novels occasion to think of this department of literature, supposed to be the natural fruit and expression of the age. We conceive that the obvious division of modern romance is into two kinds: first, the novels of costume or of circumstance, which is the old style, and vastly the most numerous. In this class, the hero, without any particular character, is in a very particular circumstance; he is greatly in want of a fortune or of a wife, and usually of both, and the business of the piece is to provide him suitably. This is the problem to be solved in thousands of English romances, including the Porter novels and the more splendid examples of the Edgeworth and Scott romances.

THE best songs in English poetry are by that heavy, hard, pedantic poet, Ben Jonson. Jonson is rude, and only on rare occasions gay. Tennyson is always fine, but Jonson's beauty is more grateful than Tennyson's. It is a natural manly grace of a robust workman.

¶ It is curious how sleepy and foolish we are, that these tales will so take us. Again and again we have been caught in that old foolish trap. Had one noble thought, opening the chambers of the intellect, one sentiment from the heart of God been spoken by them, the reader had been made a participator of their triumph; he too had been an invited and eternal guest; but this reward granted them is property, all-excluding property, a little cake baked for them to eat and for none other, nay, a preference and cosseting which is rude and insulting to all but the minion.

¶ Except in the stories of Edgeworth and Scott, whose talent knew how to give to the book a thousand adventitious graces, the novels of costume are all one, and there is but one standard English novel, like the one orthodox sermon, which with slight variation is repeated every Sunday from so many pulpits.

¶ But the other novel, of which Wilhelm Meister is the best specimen, the novel of *character*, treats the reader with more respect; the development of character being the problem, the reader is made a partaker of the whole prosperity. Everything good in such a story remains with the reader when the book is closed. A noble book was Wilhelm Meister. It gave the hint of a cultivated

society which we found nowhere else. It was founded on power to do what was necessary, each person finding it an indispensable qualification of membership that he could do something useful, as in mechanics or agriculture or other indispensable art; then a probity, a justice was to be its element, symbolized by the insisting that each property should be cleared of privilege, and should pay its full tax to the state. Then a perception of beauty was the equally indispensable element of the association, by which each was dignified and all were dignified; then each was to obey his genius to the length of abandonment. They watched each candidate vigilantly, without his knowing that he was observed, and when he had given proof that he was a faithful man, then all doors, all houses, all relations were open to him; high behavior fraternized with high behavior, without question of heraldry, and the only power recognized is the force of character.

¶ The novels of Fashion, of Disraeli, Mrs. Gore, Mr. Ward, belong to the class of novels of costume, because the aim is purely external success. Of the tales of fashionable life, by far the most agreeable and the most efficient was Vivian Grey. Young men were and still are the readers and victims. Byron ruled for a time, but Vivian, with no tithe of Byron's genius, rules longer. One can distinguish the Vivians in all companies. They would quiz their father and mother and lover and friend. They discuss sun and planets, liberty and fate, love and death, over the soup. They never sleep, go nowhere, stay nowhere, eat nothing, and know nobody, but are up to anything, though it were the genesis of Nature, or the last cataclysm, —Festus-like, Faust-like, Jove-like, and could write an Iliad any rainy morning, if fame were not such a bore. Men, women, though the greatest and fairest, are stupid things; but a rifle, and a mild pleasant gunpowder, a spaniel, and a cheroot, are themes for Olympus. I fear it was in part the influence of such pictures on living society which made the style of manners of which we have so many pictures, as, for example, in the following account of the English fashionist. "His highest triumph is to appear with the most wooden manners, as little polished as will suffice to avoid castigation, nay, to contrive even his civilities so that they may appear as near as may be to affronts; instead of a noble high-bred ease, to have the courage to offend against every restraint of decorum, to invert the relation in which our sex stand to women, so that they appear the attacking, and he the passive or defensive party."

¶ We must here check our gossip in mid-volley and adjourn the rest of our critical chapter to a more convenient season.

Past and Present

HERE is Carlyle's new poem, his Iliad of English woes, to follow his poem on France, entitled the History of the French Revolution. In its first aspect it is a political tract, and since Burke, since Milton, we have had nothing to compare with it. It grapples honestly with the facts lying before all men, groups and disposes them with a master's mind, and, with a heart full of manly tenderness, offers his best counsel to his brothers. Obviously, it is the book of a powerful and accomplished thinker, who has looked with naked eyes at the dreadful political signs in England for the last few years, has conversed much on these topics with such wise men of all ranks and parties as are drawn to a scholar's house, until such daily and nightly meditation has grown into a great connection, if not a system of thoughts; and the topic of English politics becomes the best vehicle for the expression of his recent thinking, recommended to him by the desire to give some timely counsels, and to strip the worst mischiefs of their plausibility. It is a brave and just book, and not a semblance. "No new truth," say the critics on all sides. Is it so? Truth is very old, but the merit of seers is not to invent but to dispose objects in their right places, and he is the commander

who is always in the mount, whose eye not only sees details, but throws crowds of details into their right arrangement and a larger and juster totality than any other. The book makes great approaches to true contemporary history, a very rare success, and firmly holds up to daylight the absurdities still tolerated in the English and European system. It is such an appeal to the conscience and honor of England as cannot be forgotten, or be feigned to be forgotten. It has the merit which belongs to every honest book, that it was self-examining before it was eloquent, and so hits all other men, and, as the country people say of good preaching, "comes bounce down into every pew." Every reader shall carry away something. The scholar shall read and write, the farmer and mechanic shall toil, with new resolution, nor forget the book when they resume their labor.

¶ Though no theocrat, and more than most philosophers a believer in political systems, Mr. Carlyle very fairly finds the calamity of the times, not in bad bills of Parliament, nor the remedy in good bills, but the vice in false and superficial aims of the people, and the remedy in honesty and insight. Like every work of genius, its great value is in telling such simple truths. As we recall the topics, we are struck with the force given to the plain truths; the picture of the English nation all sitting enchanted,—the poor, enchanted so that they cannot work, the rich, enchanted so that they cannot enjoy, and are rich in vain; the exposure of the progress of fraud into all parts and social activities; the proposition that the laborer must have a greater share in his earnings; that the principle of permanence shall be admitted into all contracts of mutual service; that the state shall provide at least schoolmaster's education for all the citizens; the exhortation to the workman that he shall respect the work and not the wages; to the scholar, that he shall be there for light; to the idle, that no man shall sit idle; the picture of Abbot Samson, the true governor, who "is not there to expect reason and nobleness of others, he is there to give them of his own reason and nobleness;" and the assumption throughout the book, that a new chivalry and nobility, namely, the dynasty of labor, is replacing the old nobilities. These things strike us with a force which reminds us of the morals of the Oriental or early Greek masters, and of no modern book. Truly in these things is great reward. It is not by sitting still at a grand distance and calling the human race *larvæ*, that men are to be helped, nor by helping the depraved after their own foolish fashion, but by doing unweariedly the particular work we were born to do. Let no man think himself absolved because he does a generous action and befriends the poor, but let him see whether he so holds his property that a benefit goes from it to all. A man's diet should be what is simplest and readiest to be had, because it is so private a good. His house should be better, because that is for the use of hundreds, perhaps of thousands, and is the property of the traveller. But his speech is a perpetual and public instrument; let that always side with the race and yield neither a lie nor a sneer. His manners,—let them be hospitable and civilizing, so that no Phidias or Raphael shall have taught anything better in canvas or stone; and his acts should be representative of the human race, as one who makes them rich in his having, and poor in his want.

¶ It requires great courage in a man of letters to handle the contemporary practical questions; not because he then has all men for his rivals, but because of the infinite entanglements of the problem, and the waste of strength in gathering unripe fruits. The task is superhuman; and the poet knows well that a little time will do more than the most puissant genius. Time stills the loud noise of opinions, sinks the small, raises the great, so that the true emerges without effort and in perfect harmony to all eyes; but the truth of the present hour, except in particulars and single relations, is unattainable. Each man can very well know his own part of duty, if

he will; but to bring out the truth for beauty, and as literature, surmounts the powers of art. The most elaborate history of to-day will have the oddest dislocated look in the next generation. The historian of to-day is yet three ages off. The poet cannot descend into the turbid present without injury to his rarest gifts. Hence that necessity of isolation which genius has always felt. He must stand on his glass tripod, if he would keep his electricity.

¶ But when the political aspects are so calamitous that the sympathies of the man overpower the habits of the poet, a higher than literary inspiration may succor him. It is a costly proof of character that the most renowned scholar of England should take his reputation in his hand and should descend into the ring; and he has added to his love whatever honor his opinions may forfeit. To atone for this departure from the vows of the scholar and his eternal duties to this secular charity, we have at least this gain, that here is a message which those to whom it was addressed cannot choose but hear. Though they die, they must listen. It is plain that whether by hope or by fear, or were it only by delight in this panorama of brilliant images, all the great classes of English society must read, even those whose existence it proscribes. Poor Queen Victoria,—poor Sir Robert Peel,— poor Primate and Bishops,—poor Dukes and Lords! There is no help in place or pride, or in looking another way; a grain of wit is more penetrating than the lightning of the night-storm, which no curtains or shutters will keep out. Here is a book which will be read, no thanks to anybody but itself. What pains, what hopes, what vows, shall come of the reading! Here is a book as full of treason as an egg is full of meat, and every lordship and worship and high form and ceremony of English conservatism tossed like a football into the air, and kept in the air, with merciless kicks and rebounds, and yet not a word is punishable by statute. The wit has eluded all official zeal; and yet these dire jokes, these cunning thrusts, this flaming sword of Cherubim waved high in air, illuminates the whole horizon, and shows to the eyes of the universe every wound it inflicts. Worst of all for the party attacked, it bereaves them beforehand of all sympathy, by anticipating the plea of poetic and humane conservatism, and impressing the reader with the conviction that the satirist himself has the truest love for everything old and excellent in English land and institutions, and a genuine respect for the basis of truth in those whom he exposes.

¶ We are at some loss how to state what strikes us as the fault of this remarkable book, for the variety and excellence of the talent displayed in it is pretty sure to leave all special criticism in the wrong. And we may easily fail in expressing the general objection which we feel. It appears to us as a certain disproportion in the picture, caused by the obtrusion of the whims of the painter. In this work, as in his former labors, Mr. Carlyle reminds us of a sick giant. His humors are expressed with so much force of constitution that his fancies are more attractive and more credible than the sanity of duller men. But the habitual exaggeration of the tone wearies whilst it stimulates. It is felt to be so much deduction from the universality of the picture. It is not serene sunshine, but everything is seen in lurid storm-lights. Every object attitudinizes, to the very mountains and stars almost, under the refraction of this wonderful humorist; and instead of the common earth and sky, we have a Martin's Creation or Judgment Day. A crisis has always arrived which requires a *deus ex machinâ*. One can hardly credit, whilst under the spell of this magician, that the world always had the same bankrupt look, to foregoing ages as to us,—as of a failed world just re-collecting its old withered forces to begin again and try to do a little business. It was perhaps inseparable from the attempt to write a book of wit and imagination on English politics that a certain local emphasis and love of effect, such as is the vice of preaching, should appear,—producing on the reader a

feeling of forlornness by the excess of value attributed to circumstances. But the splendor of wit cannot outdazzle the calm daylight, which always shows every individual man in balance with his age, and able to work out his own salvation from all the follies of that, and no such glaring contrasts or severalties in that or this. Each age has its own follies, as its majority is made up of foolish young people; its superstitions appear no superstitions to itself; and if you should ask the contemporary, he would tell you, with pride or with regret (according as he was practical or poetic), that he had none. But after a short time, down go its follies and weakness and the memory of them; its virtues alone remain, and its limitation assumes the poetic form of a beautiful superstition, as the dimness of our sight clothes the objects in the horizon with mist and color. The revelation of Reason is this of the unchangeableness of the fact of humanity under all its subjective aspects; that to the cowering it always cowers, to the daring it opens great avenues. The ancients are only venerable to us because distance has destroyed what was trivial; as the sun and stars affect us only grandly, because we cannot reach to their smoke and surfaces and say, Is that all?

¶ And yet the gravity of the times, the manifold and increasing dangers of the English State, may easily excuse some over-coloring of the picture; and we at this distance are not so far removed from any of the specific evils, and are deeply participant in too many, not to share the gloom and thank the love and the courage of the counsellor. This book is full of humanity, and nothing is more excellent in this as in all Mr. Carlyle's works than the attitude of the writer. He has the dignity of a man of letters, who knows what belongs to him, and never deviates from his sphere; a continuer of the great line of scholars, he sustains their office in the highest credit and honor. If the good heaven have any good word to impart to this unworthy generation, here is one scribe qualified and clothed for its occasion. One excellence he has in an age of Mammon and of criticism, that he never suffers the eye of his wonder to close. Let who will be the dupe of trifles, he cannot keep his eye off from that gracious Infinite which embosoms us.

¶ As a literary artist he has great merits, beginning with the main one that he never wrote one dull line. How well-read, how adroit, that thousand arts in his one art of writing; with his expedient for expressing those unproven opinions which he entertains but will not endorse, by summoning one of his men of straw from the cell,—and the respectable Sauerteig, or Teufelsdröckh, or Dryasdust, or Picturesque Traveller, says what is put into his mouth, and disappears. That morbid temperament has given his rhetoric a somewhat bloated character; a luxury to many imaginative and learned persons, like a showery south wind with its sunbursts and rapid chasing of lights and glooms over the landscape, and yet its offensiveness to multitudes of reluctant lovers makes us often wish some concession were possible on the part of the humorist. Yet it must not be forgotten that in all his fun of castanets, or playing of tunes with a whiplash like some renowned charioteers,—in all this glad and needful venting of his redundant spirits, he does yet, ever and anon, as if catching the glance of one wise man in the crowd, quit his tempestuous key, and lance at him in clear level tone the very word, and then with new glee return to his game. He is like a lover or an outlaw who wraps up his message in a serenade, which is nonsense to the sentinel, but salvation to the ear for which it is meant. He does not dodge the question, but gives sincerity where it is due.

¶ One word more respecting this remarkable style. We have in literature few specimens of magnificence. Plato is the purple ancient, and Bacon and Milton the moderns of the richest strains. Burke sometimes reaches to that exuberant fulness, though deficient in depth. Carlyle, in his strange, half-mad way, has entered the Field of the Cloth of Gold, and shown a vigor and wealth

of resource which has no rival in the tourney-play of these times;—the indubitable champion of England. Carlyle is the first domestication of the modern system, with its infinity of details, into style. We have been civilizing very fast, building London and Paris, and now planting New England and India, New Holland and Oregon,—and it has not appeared in literature; there has been no analogous expansion and recomposition in books. Carlyle's style is the first emergence of all this wealth and labor with which the world has gone with child so long. London and Europe, tunnelled, graded, corn-lawed, with trade-nobility, and East and West Indies for dependencies; and America, with the Rocky Hills in the horizon, have never before been conquered in literature. This is the first invasion and conquest. How like an air-balloon or bird of Jove does he seem to float over the continent, and, stooping here and there, pounce on a fact as a symbol which was never a symbol before. This is the first experiment, and something of rudeness and haste must be pardoned to so great an achievement. It will be done again and again, sharper, simpler; but fortunate is he who did it first, though never so giant-like and fabulous. This grandiose character pervades his wit and his imagination. We have never had anything in literature so like earthquakes as the laughter of Carlyle. He "shakes with his mountain mirth." It is like the laughter of the Genii in the horizon. These jokes shake down the Parliament House and Windsor Castle, Temple and Tower, and the future shall echo the dangerous peals. The other particular of magnificence is in his rhymes. Carlyle is a poet who is altogether too burly in his frame and habit to submit to the limits of metre. Yet he is full of rhythm, not only in the perpetual melody of his periods, but in the burdens, refrains, and grand returns of his sense and music. Whatever thought or motto has once appeared to him fraught with meaning, becomes an omen to him henceforward, and is sure to return with deeper tones and weightier import, now as threat, now as confirmation, in gigantic reverberation, as if the hills, the horizon, and the next ages returned the sound.

A Letter

AS we are very liable, in common with the letter-writing world, to fall behind-hand in our correspondence; and a little more liable because in consequence of our editorial function we receive more epistles than our individual share, we have thought that we might clear our account by writing a quarterly catholic letter to all and several who have honored us, in verse or prose, with their confidence, and expressed a curiosity to know our opinion. We shall be compelled to dispose very rapidly of quite miscellaneous topics.

¶ And first, in regard to the writer who has given us his speculations on Railroads and Air-roads, our correspondent shall have his own way. To the railway, we must say,—like the courageous lord mayor at his first hunting, when told the hare was coming,—"Let it come, in Heaven's name, I am not afraid on 't." Very unlooked-for political and social effects of the iron road are fast appearing. It will require an expansion of the police of the old world. When a railroad train shoots through Europe every day from Brussels to Vienna, from Vienna to Constantinople, it cannot stop every twenty or thirty miles at a German custom-house, for examination of property and passports. But when our correspondent proceeds to flying-machines, we have no longer the smallest taper-light of credible information and experience left, and must speak on *a priori* grounds.

¶ Shortly, then, we think the population is not yet quite fit for them, and therefore there will be none. Our friend suggests so many inconveniences from piracy out of the high air to orchards and lone houses, and also to other high fliers, and the total inadequacy of the present system of defence, that we have not the heart to break the sleep of the good public by the repetition of these

details. When children come into the library, we put the inkstand and the watch on the high shelf until they be a little older; and Nature has set the sun and moon in plain sight and use, but laid them on the high shelf where her roystering boys may not in some mad Saturday afternoon pull them down or burn their fingers. The sea and the iron road are safe toys for such ungrown people; we are not yet ripe to be birds.

¶ In the next place, to fifteen letters on Communities, and the Prospects of Culture, and the destinies of the cultivated class,—what answer? Excellent reasons have been shown us why the writers, obviously persons of sincerity and elegance, should be dissatisfied with the life they lead, and with their company. They have exhausted all its benefit, and will not bear it much longer. Excellent reasons they have shown why something better should be tried. They want a friend to whom they can speak and from whom they may hear now and then a reasonable word. They are willing to work, so it be with friends. They do not entertain anything absurd or even difficult. They do not wish to force society into hated reforms, nor to break with society. They do not wish a township or any large expenditure or incorporated association, but simply a concentration of chosen people. By the slightest possible concert, persevered in through four or five years, they think that a neighborhood might be formed of friends who would provoke each other to the best activity. They believe that this society would fill up the terrific chasm of ennui, and would give their genius that inspiration which it seems to wait in vain.

¶ But, "the selfishness!" One of the writers relentingly says, "What shall my uncles and aunts do without me?" and desires distinctly to be understood not to propose the Indian mode of giving decrepit relatives as much of the mud of holy Ganges as they can swallow, and more, but to begin the enterprise of concentration by concentrating all uncles and aunts in one delightful village by themselves!—so heedless is our correspondent of putting all the dough into one pan, and all the leaven into another. Another objection seems to have occurred to a subtle but ardent advocate. Is it, he writes, a too great wilfulness and intermeddling with life, —which is better accepted than calculated? Perhaps so; but let us not be too curiously good. The Buddhist is a practical Necessitarian; the Yankee is not. We do a great many selfish things every day; among them all let us do one thing of enlightened selfishness. It were fit to forbid concert and calculation in this particular, if that were our system, if we were up to the mark of self-denial and faith in our general activity. But to be prudent in all the particulars of life, and in this one thing alone religiously forbearing; prudent to secure to ourselves an injurious society, temptations to folly and despair, degrading examples, and enemies; and only abstinent when it is proposed to provide ourselves with guides, examples, lovers!

¶ We shall hardly trust ourselves to reply to arguments by which we would gladly be persuaded. The more discontent, the better we like it. It is not for nothing, we assure ourselves, that our people are busied with these projects of a better social state, and that sincere persons of all parties are demanding somewhat vital and poetic of our stagnant society. How fantastic and unpresentable soever the theory has hitherto seemed, how swiftly shrinking from the examination of practical men, let us not lose the warning of that most significant dream. How joyfully we have felt the admonition of larger natures which despised our aims and pursuits, conscious that a voice out of heaven spoke to us in that scorn. But it would be unjust not to remind our younger friends that whilst this aspiration has always made its mark in the lives of men of thought, in vigorous individuals it does not remain a detached object, but is satisfied along with the satisfaction of other aims. To live solitary and unexpressed is painful,—painful in proportion to one's consciousness of ripeness and equality to the offices of friendship. But

herein we are never quite forsaken by the Divine Providence. The loneliest man, after twenty years, discovers that he stood in a circle of friends, who will then show like a close fraternity held by some masonic tie. But we are impatient of the tedious introductions of Destiny, and a little faithless, and would venture something to accelerate them. One thing is plain, that discontent and the luxury of tears will bring nothing to pass. Regrets and Bohemian castles and æsthetic villages are not a very self-helping class of productions, but are the voices of debility. Especially to one importunate correspondent we must say that there is no chance for the æsthetic village. Every one of the villagers has committed his several blunder; his genius was good, his stars consenting, but he was a marplot. And though the recuperative force in every man may be relied on infinitely, and must be relied on before it will exert itself. As long as he sleeps in the shade of the present error, the after-nature does not betray its resources. Whilst he dwells in the old sin, he will pay the old fine.

¶ More letters we have on the subject of the position of young men, which accord well enough with what we see and hear. There is an American disease, a paralysis of the active faculties which falls on young men of this country as soon as they have finished their college education, which strips them of all manly aims and bereaves them of animal spirits; so that the noblest youths are in a few years converted into pale Caryatides to uphold the temple of conventions. They are in the state of the young Persians, when "that mighty Yezdam prophet" addressed them and said, "Behold the signs of evil days are come; there is now no longer any right course of action, nor any self-devotion left among the Iranis." As soon as they have arrived at this term, there are no employments to satisfy them, they are educated above the work of their times and country, and disdain it. Many of the more acute minds pass into a lofty criticism of these things, which only embitters their sensibility to the evil and widens the feeling of hostility between them and the citizens at large. From this cause, companies of the best-educated young men in the Atlantic states every week take their departure for Europe; for no business that they have in that country, but simply because they shall so be hid from the reproachful eyes of their countrymen and agreeably entertained for one or two years, with some lurking hope, no doubt, that something may turn up to give them a decided direction. It is easy to see that this is only a postponement of their proper work, with the additional disadvantage of a two years' vacation. Add that this class is rapidly increasing by the infatuation of the active class, who, whilst they regard these young Athenians with suspicion and dislike, educate their own children in the same courses, and use all possible endeavors to secure to them the same result.

¶ Certainly we are not insensible to this calamity, as described by the observers or witnessed by ourselves. It is not quite new and peculiar; though we should not know where to find in literature any record of so much unbalanced intellectuality, such undeniable apprehension without talent, so much power without equal applicability, as our young men pretend to. Yet in Theodore Mundt's account of Frederic Hölderlin's Hyperion, we were not a little struck with the following Jeremiad of the despair of Germany, whose tone is still so familiar that we were somewhat mortified to find that it was written in 1799. "Then came I to the Germans. I cannot conceive of a people more disjoined than the Germans. Mechanics you shall see, but no man. Is it not like some battle-field, where hands and arms and all members lie scattered about, whilst the life-blood runs away into the sand? Let every man mind his own, you say, and I say the same. Only let him mind it with all his heart, and not with this cold study,—literally, hypocritically, to appear that which he passes for,—but in good earnest, and in all love, let him be that which he is; then there is a soul in

his deed. And is he driven into a circumstance where the spirit must not live? Let him thrust it from him with scorn, and learn to dig and plough. There is nothing holy which is not desecrated, which is not degraded to a mean end among this people. It is heartrending to see your poet, your artist, and all who still revere genius, who love and foster the Beautiful. The Good! They live in the world as strangers in their own house; they are like the patient Ulysses whilst he sat in the guise of a beggar at his own door, whilst shameless rioters shouted in the hall and asked, Who brought the ragamuffin here? Full of love, talent and hope spring up the darlings of the muse among the Germans; some seven years later, and they flit about like ghosts, cold and silent; they are like a soil which an enemy has sown with poison, that it will not bear a blade of grass. On earth all is imperfect! is the old proverb of the German. Aye, but if one should say to these God-forsaken, that with them all is imperfect only because they leave nothing pure which they do not pollute, nothing holy which they do not defile with their fumbling hands; that with them nothing prospers because the godlike nature which is the root of all prosperity they do not revere; that with them, truly, life is shallow and anxious and full of discord, because they despise genius, which brings power and nobleness into manly action, cheerfulness into endurance, and love and brotherhood into towns and houses. Where a people honors genius in its artists, there breathes like an atmosphere a universal soul, to which the shy sensibility opens, which melts self-conceit,—all hearts become pious and great, and it adds fire to heroes. The home of all men is with such a people, and there will the stranger gladly abide. But where the divine nature and the artist is crushed, the sweetness of life is gone, and every other planet is better than the earth. Men deteriorate, folly increases, and a gross mind with it; drunkenness comes with a disaster; with the wantonness of the tongue and with the anxiety for a livelihood the blessing of every year becomes a curse, and all the gods depart."

¶ The steep antagonism between the money-getting and the academic class must be freely admitted, and perhaps is the more violent that whilst our work is imposed by the soil and the sea, our culture is the tradition of Europe. But we cannot share the desperation of our contemporaries; least of all should we think a preternatural enlargement of the intellect a calamity. A new perception, the smallest new activity given to the perceptive power, is a victory won to the living universe from Chaos and old Night, and cheaply bought by any amounts of hard fare and false social position. The balance of mind and body will redress itself fast enough. Superficialness is the real distemper. In all the cases we have ever seen where people were supposed to suffer from too much wit, or, as men said, from a blade too sharp for the scabbard, it turned out that they had not wit enough. It may easily happen that we are grown very idle, and must go to work, and that the times must be worse before they are better. It is very certain that speculation is no succedaneum for life. What we would know, we must do. As if any taste or imagination could take the place of fidelity! The old Duty is the old God. And we may come to this by the rudest teaching. A friend of ours went five years ago to Illinois to buy a farm for his son. Though there were crowds of emigrants in the roads, the country was open on both sides, and long intervals between hamlets and houses. Now after five years he has just been to visit the young farmer and see how he prospered, and reports that a miracle had been wrought. From Massachusetts to Illinois the land is fenced in and builded over, almost like New England itself, and the proofs of thrifty cultivation abound;—a result not so much owing to the natural increase of population as to the hard times, which, driving men out of cities and trade, forced them to take off their coats and go to work on the land; which has rewarded them not only with wheat but with habits of

labor. Perhaps the adversities of our commerce have not yet been pushed to the wholesomest degree of severity. Apathies and total want of work, and reflection on the imaginative character of American life, etc., etc., are like seasickness, and never will obtain any sympathy if there is a wood-pile in the yard, or an unweeded patch in the garden; not to mention the graver absurdity of a youth of noble aims who can find no field for his energies, whilst the colossal wrongs of the Indian, of the Negro, of the emigrant, remain unmitigated, and the religious, civil and judicial forms of the country are confessedly effete and offensive. We must refer our clients back to themselves, believing that every man knows in his heart the cure for the disease he so ostentatiously bewails.

¶ As far as our correspondents have entangled their private griefs with the cause of American Literature, we counsel them to disengage themselves as fast as possible. In Cambridge orations and elsewhere there is much inquiry for that great absentee American Literature. What can have become of it? The least said is best. A literature is no man's private concern, but a secular and generic result, and is the affair of a power which works by a prodigality of life and force very dismaying to behold,—every trait of beauty purchased by hecatombs of private tragedy. The pruning in the wild gardens of Nature is never forborne. Many of the best must die of consumption, many of despair, and many be stupid and insane, before the one great and fortunate life which they each predicted can shoot up into a thrifty and beneficent existence.

The Tragic

HE has seen but half the universe who never has been shown the house of Pain. As the salt sea covers more than two thirds of the surface of the globe, so sorrow encroaches in man on felicity. The conversation of men is a mixture of regrets and apprehensions. I do not know but the prevalent hue of things to the eye of leisure is melancholy. In the dark hours, our existence seems to be a defensive war, a struggle against the encroaching All, which threatens surely to engulf us soon, and is impatient of our short reprieve. How slender the possession that yet remains to us; how faint the animation! how the spirit seems already to contract its domain, retiring within narrower walls by the loss of memory, leaving its planted fields to erasure and annihilation. Already our thoughts and words have an alien sound. There is a simultaneous diminution of memory and hope. Projects that once we laughed and leapt to execute find us now sleepy and preparing to lie down in the snow. And in the serene hours we have no courage to spare. We cannot afford to let go any advantages. The riches of body or of mind which we do not need to-day are the reserved fund against the calamity that may arrive to-morrow. It is usually agreed that some nations have a more sombre temperament, and one would say that history gave no record of any society in which despondency came so readily to heart as we see it and feel it in ours. Melancholy cleaves to the English mind in both hemispheres as closely as to the strings of an Æolian harp. Men and women at thirty years, and even earlier, have lost all spring and vivacity, and if they fail in their first enterprises, they throw up the game. But whether we and those who are next to us are more or less vulnerable, no theory of life can have any right which leaves out of account the values of vice, pain, disease, poverty, insecurity, disunion, fear and death.

¶ What are the conspicuous tragic elements in human nature? The bitterest tragic element in life to be derived from an intellectual source is the belief in a brute Fate or Destiny; the belief that the order of Nature and events is controlled by a law not adapted to man, nor man to that, but which holds on its way to the end, serving him if his wishes chance to lie in the same course, crushing him if his wishes lie contrary to it, and heedless whether it serves or crushes him. This is the terrible meaning that lies at the foundation of the old Greek tragedy, and makes the Œdipus

and Antigone and Orestes objects of such hopeless commiseration. They must perish, and there is no overgod to stop or to mollify this hideous enginery that grinds or thunders, and snatches them up into its terrific system. The same idea makes the paralyzing terror with which the East Indian mythology haunts the imagination. The same thought is the predestination of the Turk. And universally, in uneducated and unreflecting persons on whom too the religious sentiment exerts little force, we discover traits of the same superstition: "If you balk water you will be drowned the next time;" "if you count ten stars you will fall down dead;" "if you spill the salt;" "if your fork sticks upright in the floor;" "if you say the Lord's prayer backwards;"—and so on, a several penalty, nowise grounded in the nature of the thing, but on an arbitrary will. But this terror of contravening an unascertained and unascertainable will cannot co-exist with reflection: it disappears with civilization, and can no more be reproduced than the fear of ghosts after childhood. It is discriminated from the doctrine of Philosophical Necessity herein: that the last is an Optimism, and therefore the suffering individual finds his good consulted in the good of all, of which he is a part. But in destiny, it is not the good of the whole or the *best will* that is enacted, but only *one particular will*. Destiny properly is not a will at all, but an immense whim; and this the only ground of terror and despair in the rational mind, and of tragedy in literature. Hence the antique tragedy, which was founded on this faith, can never be reproduced.

¶ After reason and faith have introduced a better public and private tradition, the tragic element is somewhat circumscribed. There must always remain, however, the hindrance of our private satisfaction by the laws of the world. The law which establishes nature and the human race, continually thwarts the will of ignorant individuals, and this in the particulars of disease, want, insecurity and disunion.

¶ But the essence of tragedy does not seem to me to lie in any list of particular evils. After we have enumerated famine, fever, inaptitude, mutilation, rack, madness and loss of friends, we have not yet included the proper tragic element, which is Terror, and which does not respect definite evils but indefinite; an ominous spirit which haunts the afternoon and the night, idleness and solitude.

¶ A low, haggard sprite sits by our side, "casting the fashion of uncertain evils"—a sinister presentiment, a power of the imagination to dislocate things orderly and cheerful and show them in startling array. Hark! what sounds on the night wind, the cry of Murder in that friendly house; see these marks of stamping feet, of hidden riot. The whisper overheard, the detected glance, the glare of malignity, ungrounded fears, suspicions, half-knowledge and mistakes, darken the brow and chill the heart of men. And accordingly it is natures not clear, not of quick and steady perceptions, but imperfect characters from which somewhat is hidden that all others see, who suffer most from these causes. In those persons who move the profoundest pity, tragedy seems to consist in temperament, not in events. There are people who have an appetite for grief, pleasure is not strong enough and they crave pain, mithridatic stomachs which must be fed on poisoned bread, natures so doomed that no prosperity can soothe their ragged and disheveled desolation. They mis-hear and mis-behold, they suspect and dread. They handle every nettle and ivy in the hedge, and tread on every snake in the meadow.

> "Come bad chance,
> And we add it to our strength,
> And we teach it art and length,
> Itself o'er us to advance."

¶ Frankly, then, it is necessary to say that all sorrow dwells in a low region. It is superficial; for the most part fantastic, or in the appearance and not in things. Tragedy is in the eye of the observer, and not in the heart of the sufferer. It looks like an insupportable load under which earth moans aloud. But

analyze it; it is not I, it is not you, it is always another person who is tormented. If a man says, Lo! I suffer—it is apparent that he suffers not, for grief is dumb. It is so distributed as not to destroy. That which would rend you falls on tougher textures. That which seems intolerable reproach or bereavement does not take from the accused or bereaved man or woman appetite or sleep. Some men are above grief, and some below it. Few are capable of love. In phlegmatic natures calamity is unaffecting, in shallow natures it is rhetorical. Tragedy must be somewhat which I can respect. A querulous habit is not tragedy. A panic such as frequently in ancient or savage nations put a troop or an army to flight without an enemy; a fear of ghosts; a terror of freezing to death that seizes a man in a winter midnight on the moors; a fright at uncertain sounds heard by a family at night in the cellar or on the stairs,—are terrors that make the knees knock and the teeth clatter, but are no tragedy, any more than seasickness, which may also destroy life. It is full of illusion. As it comes, it has its support. The most exposed classes, soldiers, sailors, paupers, are nowise destitute of animal spirits. The spirit is true to itself, and finds its own support in any condition, learns to live in what is called calamity as easily as in what is called felicity; as the frailest glass bell will support a weight of a thousand pounds of water at the bottom of a river or sea, if filled with the same.

¶ A man should not commit his tranquillity to things, but should keep as much as possible the reins in his own hands, rarely giving way to extreme emotion of joy or grief. It is observed that the earliest works of the art of sculpture are countenances of sublime tranquillity. The Egyptian sphinxes, which sit to-day as they sat when the Greek came and saw them and departed, and when the Roman came and saw them and departed, and as they will still sit when the Turk, the Frenchman and the Englishman, who visit them now, shall have passed by,—"with their stony eyes fixed on the East and on the Nile," have countenances expressive of complacency and repose, an expression of health, deserving their longevity, and verifying the primeval sentence of history on the permanency of that people, "Their strength is to sit still." To this architectural stability of the human form, the Greek genius added an ideal beauty, without disturbing the seals of serenity; permitting no violence of mirth, or wrath, or suffering. This was true to human nature. For in life, actions are few, opinions even few, prayers few; loves, hatreds, or any emissions of the soul. All that life demands of us through the greater part of the day is an equilibrium, a readiness, open eyes and ears, and free hands. Society asks this, and truth, and love, and the genius of our life. There is a fire in some men which demands an outlet in some rude action; they betray their impatience of quiet by an irregular Catilinarian gait; by irregular, faltering, disturbed speech, too emphatic for the occasion. They treat trifles with a tragic air. This is not beautiful. Could they not lay a rod or two of stone wall, and work off this superabundant irritability? When two strangers meet in the highway, what each demands of the other is that the aspect should show a firm mind, ready for any event of good or ill, prepared alike to give death or to give life, as the emergency of the next moment may require. We must walk as guests in Nature; not impassioned, but cool and disengaged. A man should try Time, and his face should wear the expression of a just judge, who has nowise made up his opinion, who fears nothing, and even hopes nothing, but who puts Nature and fortune on their merits: he will hear the case out, and then decide. For all melancholy, as all passion, belongs to the exterior life. Whilst a man is not grounded in the divine life by his proper roots, he clings by some tendrils of affection to society—mayhap to what is best and greatest in it, and in calm times it will not appear that he is adrift and not moored; but let any shock take place in society, any revolution of custom, of law, of opinion, and at once his type of permanence is shaken. The dis-

order of his neighbors appears to him universal disorder; chaos is come again. But in truth he was already a driving wreck before the wind arose, which only revealed to him his vagabond state. If a man is centered, men and events appear to him a fair image or reflection of that which he knoweth beforehand in himself. If any perversity or profligacy break out in society, he will join with others to avert the mischief, but it will not arouse resentment or fear, because he discerns its impassionable limits. He sees already in the ebullition of sin the simultaneous redress.

¶ Particular reliefs, also, fit themselves to human calamities; for the world will be in equilibrium, and hates all manner of exaggeration.

¶ Time the consoler, Time the rich carrier of all changes, dries the freshest tears by obtruding new figures, new costumes, new roads, on our eye, new voices on our ear. As the west wind lifts up again the heads of the wheat which were bent down and lodged in the storm, and combs out the matted and dishevelled grass as it lay in night-locks on the ground, so we let in Time as a drying wind into the seed-field of thoughts which are dark and wet and low bent. Time restores to them temper and elasticity. How fast we forget the blow that threatened to cripple us. Nature will not sit still; the faculties will do somewhat; new hopes spring, new affections twine, and the broken is whole again.

¶ Time consoles, but Temperament resists the impression of pain. Nature proportions her defence to the assault. Our human being is wonderfully plastic; if it cannot win this satisfaction here, it makes itself amends by running out there and winning that. It is like a stream of water, which, if dammed up on one bank, overruns the other, and flows equally at its own convenience over sand, or mud, or marble. Most suffering is only apparent. We fancy it is torture; the patient has his own compensations. A tender American girl doubts of Divine Providence whilst she reads the horrors of "the middle passage;" and they are bad enough at the mildest; but to such as she these crucifixions do not come; they come to the obtuse and barbarous, to whom they are not horrid, but only a little worse than the old sufferings. They exchange a cannibal war for the stench of the hold. They have gratifications which would be none to the civilized girl. The market-man never damned the lady because she had not paid her bill, but the stout Irishwoman has to take that once a month. She, however, never feels weakness in her back because of the slave-trade. This self-adapting strength is especially seen in disease. "It is my duty," says Sir Charles Bell, "to visit certain wards of the hospital where there is no patient admitted but with that complaint which most fills the imagination with the idea of insupportable pain and certain death. Yet these wards are not the least remarkable for the composure and cheerfulness of their inmates. The individual who suffers has a mysterious counterbalance to that condition, which, to us who look upon her, appears to be attended with no alleviating circumstances." Analogous supplies are made to those individuals whose character leads them to vast exertions of body and mind. Napoleon said to one of his friends at St. Helena, "Nature seems to have calculated that I should have great reverses to endure, for she has given me a temperament like a block of marble. Thunder cannot move it; the shaft merely glides along. The great events of my life have slipped over me without making any demand on my moral or physical nature."

¶ The intellect is a consoler, which delights in detaching or putting an interval between a man and his fortune, and so converts the sufferer into a spectator and his pain into poetry. It yields the joys of conversation, of letters and of science. Hence also the torments of life become tuneful tragedy, solemn and soft with music, and garnished with rich dark pictures. But higher still than the activities of art, the intellect in its purity and the moral sense in its purity are not distinguished from each other, and both ravish us into a region whereunto these passionate clouds of sorrow cannot rise.

GENERAL INDEX

GENERAL INDEX

[Titles of Essays and Poems are printed in SMALL CAPITALS.]

A

Abandonment, no greatness without, 636, 676; the way of life, 222.
Abdel Kader, and Daumas, 703; on nobility, 573.
Able men, have respect for justice, 51; ask only for ability, 407.
Abolition, bigot in, 140; the church appears in, 313; church hostile to, 981; shadow of Clarkson, 143; conventions, 166; effect of, 1124; transcendentalists and, 107.
Abolitionist, every man an, 1169, 1199; farmer the true, 663; love the arch-, 1206; made by slavery, 1206.
Aboriginal man, not engaging, 808.
Aboriginal power, 232, 542.
Aboriginal races, incapable of improvement, 1254.
Aboriginal, the State not, 297.
Absolute and relative, 371.
Absolve you to yourself, 139.
Abstemious, of criticism, 676; spirit's teachings are, 368.
Abstemiousness, quiddling, 566.
Abstinence, 67, 78.
Abstract truth, 223, 224.
Abstraction, of scholars, 567, 814.
Abstractionists, Nature furnishes, 309, 372, 373.
Absurdity, difference from me, the measure of, 334.
Abu Ali Seena, 354.
Abu Taleb, 604, 919.
Abul Khain, 354.
Abury, temple at, 506, 507.
Abuses, block ways to employments, 72.
Abyss, replies to abyss, 672; of being, 162, 352.
Accidents, not to be feared, 591; insurance office increases, 151; there are no, 661; lovely, of Nature, 307; resisting, 528.
Accomplishments, 563; of the scholar, 1029.
Accuracy, essential to beauty, 991.
Achievement, power of, 1029; not computed by time, 221.
Achilles, in every nation, 697; vulnerable, 157.
Achromatic lens, needful to see reality, 997.
Acorn, thousand forests in one, 125.
Acquaintances, high, the great happiness of life, 713.
Acquainted, be not too much, 280.
Acre, my, 876.
Acres, black, of the night, 928; mystic fruit, 877; sitfast, 846.
Acrostic, a character like, 142, 170.
Action, Actions, honest and natural agree, 142; preëxist in the actor, 267; not over-doing and busyness, 1026; not cowed by the name of, 175; dispose to greater conclusions, 296; tends to diversity, 342; of infinite elasticity, 175; not rashly explained, 271; in life, few, 1372; future not to be decided beforehand, 1145; what are called good, 140; great do not let us go behind them, 201; heroic, are beautiful, 6; not indifferent, 162, 221; independent, rare, 1014; their influence not measured by miles, 261; inscribe themselves, 405; integrate themselves, 156; intellectual quality, 568; we put our life in, 156; magnetism of, 144; leave no mark in the world, 86; measured by depth of sentiment, 172, 407; mechanical, 166; men of, 406; men wanted more than, 86; and misaction, 1026; original, necessary, 1026; natural, 6; every necessary action pleases, 609; Nelson on, 820; are pearls to discourse, 29; need perspective, 126; picture-book of creed, 733; a great pleasure, 632; is prayer, 148; reaction, 154; resounding, 251; a resource, 30; satellites to Nature, 12; essential to scholar, 29; self-rewarding, 156; we shrink from actions of our own, 1188; is in silent moments, 174; right speech not distinguished from, 756; spontaneous, strong, 167, 224, 252, 259; steps in ladder, 217; subject for sculpture, 660; should rest on substance, 269; partiality, the tax on, 406; timely, 195; and thought, 84, 406, 632; transfigured as thoughts, 30; a trick of the senses, 175; not better than verses or pictures, 1351; unconscious, 632; give vocabulary, 30; give a return of wisdom, 30, 195.
Activity, amiable, 961; children and thoughtless people like, 999; contagious, 330; frivolous, 1026; too great, 715; miscellaneous, to be stopped off, 542; makes room for itself, 426.
Actors, worst provincial excels amateur, 543.
Actual, dwarfish, 88; Goethe, poet of, 1347, 1348; ideal truer than, 1348; the imposing, 1143; modern regard for, 1324; necessary use of, 94.
Adam, age, 928; hide ourselves as, 279; Milton's, 1332; every man a new, 24, 988; perfect, 899, 914.
Adamant, of Nature, 52; passes into smoke, 665, 967; England moves on a splinter of, 437; wax to artist, 233, 855.
Adamantine, bandages, 525; government, 318; limitations, 368; necessity, 638; syllable, 312.
Adamhood, 843.
Adamitic capacity, Webster in his, 1160.
Adams, John, courage, 1311; elevation, 569; fame, 1313; old age, 718; patriotism, 1020; no backward-creeping crab, 1193; visit to, 721.
Adams, John Q., 573; com-

pany for kings, 1061; courage, 1134; eloquence, 142, 646; audacious independence, 1188; on literature, 765; reading, 765.
Adams, Samuel, 656.
Adaptation, none in man, 255; the peculiarity of human nature, 374, 819; of Nature, 532; we are victims of, 562.
Addition, the world not to be analyzed by, 227.
ADIRONDACS, 886.
Adjustments, Nature's, 532.
Admetus, 134, 674.
Admiration, strain to express, 753, 1037; not forgiven, 1256.
Adrastia, law of, 264.
Adsched of Meru, 801.
Adultery, 523.
Advance, the history of Nature, 531, 1189, 1265.
Advantage, has its tax, 162, 1132, 1150.
Advantages, each envies those he has not, 563; cannot afford to miss, 967.
Adventure, love of, 540, 1309.
Adventurer, well received, 584.
Adversity, the prosperity of the great, 591, 798.
Advertisement, most of life mere, 261, 708.
Æolian Harp, 903, 908; dumb, 809; in Nature, 289, 290, 813, 901, 923, 985; melancholy, 1370.
Æolus, steam his bag, 3.
Æons, 676, 868, 914.
Aerolites, Shakspeare's, 389.
Æschylus, we are civil to, 748; in earnest, 637; Eumenides, 263; grandest of Greek tragedians, 680; counterpart in Scott's Bride of Lammermoor, 1234; quoted, 157, 1166.
Æsop, Lincoln an, 1218; his price, 961; knew the realities of life, 600, 727; a man of the world, 465.
Æsop's Fables, 248, 387; associate us, 38, 626.
Affections, beauty, 31; benefits, 625; exhilaration, 295; geometric, 760; Heraclitus said were colored mists, 223; increases intellect, 184, 796, 1260, 1266; jets, 184; and memory, 1278, 1280; metamorphosis, 185; tent of a night, 183; pathetic region of, 617; sweetness of life, 184; make web of life, 711; essential to will, 529; woman's crown, 1180.
Affinities, in conversation, 189; essential to man of the world, 276; to great men, 338; between man and works, 1266; neglect of, 171; perception of, makes the poet, 17; of persons, 140, 534; range, 561; reciprocity, 626; of thoughts, 1254; of virtue with itself in different persons, 185; women's, 284; world enlarged by, 712.
Affirmative, being is, 162; class, 541; forces, 537; good mind chooses, 714, 1266; incessant, 714; love is, 714, 1266; we love the, 378; in manners, etc., 714; philosophy, 1019; power, 1016, 1017; principle, 252; sacred, 1011.
Afraid, do what you are afraid to do, 204, 1066.
Afrasiyab, 800.
Africa, civilization, 1136, 1138. *See* Negro, Slavery.
Africanization of U. S., 1209.
Afternoon men, 195; saunterings, 50.
Agamemnon, 132.
Agaric, self-planting, 245.
Agassiz, Louis, 792, 891; museum, 774; theories, 728, 1224.
Age, old. *See* Old Age.
Age, the characteristics of different ages, 34, 87, 89; of the present, the interest in familiar things, 34, 84, 521, 790; of fops, 895; of gold, 911; of omnibus, 1193; walks about in persons, 81, 532; of reason in a patty-pan, 1056; retrospective, 1; riddle of, 521; of analysis, 1043; each, new, 1022, 1365.
Ages, of belief, great, 586, 1008; equivalence of, 792; instruct the hours, 125; ideas work in, 1142; not idle, 96.
Agiochook, 52, 857.
Agitation, blessed, 1192.
Agitators, 88.
Agricultural Report, 1356.
Agriculture, praise of, 112; attacks on, 78; aids civilization, 628, 666, 1107; English, 448, 478; check on nomadism, 131; oldest profession, 74; respect for, 72, 117, 662; steam in, 448; thrift in, 197. *See* Farming.
AGRICULTURE OF MASSACHUSETTS, 1356.
Aids, casting off, 316, 1164, 1165.
Aim, high, 67, 293, 318, 591, 818, 966; aggrandizes the means, 704; men of, 1061; mind own, 844; want of, 583.
Air, artful, 885; influence on body and brain, 1291, 1298; exhalation, 1304; fame, 899; food of life, 1304; gifts, 967; inspiration, 247; intellectual, 672; effect on manners, 1304; is matter subdued by heat, 664; full of men, 525; moral sentiment in, 13; music, 240; an ocean, 3; receptacle, 664; of mountains, a good republican, 1304; like a river, 14; is Rock of Ages dissolved, 1292; salubrity, 898; coined into song, 179; sounds, 1256; useful and hurtful, 227; forged into words, 12; works for man, 664; worth, 1028.
Air-ball, thought, 608.
Air-bells, of fortune, 901.
Air-lord, poet, 251.
Air-pictures, 304.
Air-sown words, 899.
Airs, logs sing, 195.
Airs, putting on, 1310.
Aisles, forest, 848; monastic, 838; of Rome, 838.
Akhlak-y-Jalaly, 338.
Aladdin's lamp, oil, 770.
Alarmists, 538.
Alchemy, is in the right direction, 606.
Alcibiades, 320.
Alcott, A. B., 1063.
Alcuin, 916.
Alderman, dreariest, 616.
Alembert, Jean d', 980; quoted, 616.
Alembic of man, 7, 731.
Alexander, and Aristotle, 1037; a gentleman, 276, 1041, 1206; estimate of life, 320; and Napoleon, 1350; not representative, 818; victories, 1139.
Alexander of soil, 1356.
Alfieri, quoted, 437.
Alfred, 455, 463, 473, 510, 710.
Ali, Caliph, quoted, 69, 152; success, 964; vigor, 98.
All, the encroaching, 1370; life of, must stream through us, 1253; whom he knew, met, 755.
All-confounding pleasure, 190.
Allies, best, 797.
Allingham, William, quoted, 812.
Allston, Washington, Coleridge on, 419, 420; design, 635; habits, 815; house, 554; quoted, 310.
Almanac, of birds, 884; man

an, 559; of mental moods, 1249; Thomas's, 1357. *See, also,* Calendars.
Alms-giving, 38, 655.
Almshouse, world an, 234.
